This time Hutch, you are not right (I think this is the only one in memory) The Atari TV and PRINT ads are lining up a buch of sales, during the local FOX broadcast of ST:TNG There was a Jaguar commercial, the one about playing Cybermorph, and a Lynx ad following it up..

this is in combo with some game mag specific ads will rack up #'s that Atari needs to forward plans... it looks like the marketing plans are out of the hackers hands and in the professionals. For quite some time Atari has had two camps, the hackers (the guys actualy making software and working on the hardware) and the businessmen. Until now there has been no money for the business guys. Things have changed over there, I go in to Atari alot, and can tell you that the changes started with the F030 have enunciated themselves in a real overhaul.

Whether this is good or bad is another question totally! :-)

I have never seen a Lynx ad in any of the Marvel comics I own. And I
think the Lynx ads in DC's titles were not inclusive -- I believe the ads
appeared only in certain titles, but not in others. Any way you want to
slice it, though, Atari's past advertising for the Lynx was, at best, a mixed
success in reaching the public...

Heyaz,

I recently (saturday night) lost one of the partitions on my hard drive. Unfortuneately I had a BBS set up, mostly on this drive. It included a mailed which I did not have well backed up, as well as most of my original program archives for my BBS/Mailer Software.

So Now I am without several files that I desperately need to get a mailer back up and running, and I am searching for them on the InterNET.

If anyone knows where I can find a copy of of BinkleyTerm/ST 3.10 or newer, on the NET (Anonymous FTP Site) could they please let me know via E-Mail. Also if anyone is feeling really happy and generaous, could, they consider uuencoding Binkley, and Binkley Term Nodelist Compiler, and sending them my way?

Thanks for any information ...

>to the address listed in the archived docs?

If you've read through all the other messages, Rob A. was basically
right - for now, 2.10 -> 2.20 is the most updated and English versions of
CoNnect. Also, the suggestions for possible solutions to your dialing
problems are good, but it would help if you could describe the symptoms a
little more - like what kind of feedback is CoNnect giving you - does it give
a reason for not dialing, or does it just quit, or....?

>Michael Baffoni
>2493 Beechwood Dr. <----- Still valid for U.S.A. registration?
>Paso Robles, CA. 93446
>
Yes, by sending your $50 registration fee to either myself (the
address is good) or to Wolfgang Wander the author (in Germany) you can
register for the current version and free updates to the newest version are
sent out whenever there _is_ a new version. As far as I know, 2.40 is just
the updated encryption version....if it was a significant upgrade, I'm sure
that Wolfgang would have made the English .RSC files available.

>
>BTW- I've never actually gotten either version of CoNnect to work, they do

>a VAX! Go figure. A month ago they just figured out what gopher and archie
>were up here... sheesh!

These are _not_ demos! The only feature limited in non-registered
versions of CoNnect is the amount of time you are allowed to use them. _ALL_
features are usable and configurable. As someone may have pointed out, it may
be the status of your modem and not CoNnect (which can be too smart for its
own good :).

BTW, have VAXen heard of EMACS yet? :)!!!

I have a copy of it, and I no longer have my keyboard, so I'd say...
YES! Let's make a deal! It's the original disk with manual and box (if I can find the box). Although it is a nice program, remember that it does NOT sequence chords.

Source record: 196994

If you know the name of a particular file and you have access to
Archie, you can avoid having to collect a database of Atari softwear.
Just use Arcie to search for the ftp site addresses of the named file
and usually within 24 hours you'll get a big list of exactly where
the file is located...

For more info on Archie, read the 'Big Dummy's Guide to Internet' or
'Zen and the Art of Internet'.

If you don't have Archie on your system (or gopher or finger or any
other net-tools), perhaps it's time to write a friendly note to your
system administrator and ask why...

Because some people claim that Medusa uses a clock-doubled 68040 and
hence motorola would also call it 66Mhz.
The only problem is that I still doubt there exist any 68040 that are
clock doubled (at least, I'm sure that Apple hasn't used any clock
doubled 68040 in any product I know of)

Put as much as possible on MiniXFS. The TOS file system is just too lame.

> What are the pros and cons of using a minix partition, apart from the fact that
> I will not be able to access it without MiNT?

- It does have multiple users support. (you probably don't care,
but..)
- It is somewhat faster than TOS (you probaby won't feel the
difference anyway)
- doesn't have just longer file names but just "unrestricted" (as many
dots as you want, at any place. upper/lower case...

Problems:

Most of the problems aren't just minixfs related. The biggest problem
is the "/" vs "\" and minixfs handles it pretty well. The only
problems I could think of are:
- not accessible from plain TOS
- tools for it are rare (like fsck or defragmenting). I'd rather not
have to know what is actually available.

> I have a 2.5 Mb STe (using a patch program), and would like to know what to

If you don't expand your memory, forget about G++. Even GCC is painful
to use (useable, but painful)

> well, so you'd open up another market.

A PowerPC based machine with the Jaguar chipset too would not be a bad idea. HOWEVER, it might be a better idea to have the Jag chipset as an optional add-on, or have two separate machines, for the price conscious.

Regardless, I think that Atari better jump on the PowerPC. I don't think they've ever had a better oportunity to make a killer machine for a killer price made by a killer manufacturer. All the chips are in the right place; I hope they don't drop the ball (how's that for mixing metaphors?).

|>
|>

They are basically the same machine the 520 has .5meg of ram and the
1040 has 1.0meg of ram. I'd get a used MegaST (2meg or 4 meg) over a
520/1040. Advantages are detached keyboard, and the keyboard itself
is vastly superior (IMHO).

Look around for one with the ICD 16mhz accelerator.

Aren't the builders of the Medusa actually pirating Atari? So wouldn't
it be indeed very appropriate to use pirated software on a Medusa?

And he says that he is a pessimist. Isn't this being optimistic (ie, be given a
Medusa) ?

I agree with Chris, about Atari and Advertising. But don't you think that the
places selling the computers should advertise the fact as well?

I mean, here in England, you see paosters of PC Deals on shop windows. Go into
Dixons, and they have a multitude of Computers on Display showing their
capabilities....or just showing the blinking cursor on drive C. But they have
prices written on them, along with what the machine is capable of doing, along
with the specs.

When they did sell the Atari ST, it used to sit in a corner, on a shelf (well
next to an Archimedes, with one card saying 16 bit computer, and then a price
slapped onto it. Not even a monitor attached.

When queried about, the salesmen just laugh in your face...You don't wanna buy
that !!

Why what's wrong with it?

Not a vary good computer.

Why do you say that, then?

Can't do anything with it. Even the games are no good.

Have you ever tried using one?

No, but what's the point?

And this is a salesman. Where do Atari stand if the people selling their computers are like this.

Dixons, is a consumer electronics retail giant here, but what about specialist shops? They only seem to advertise in Atari Mags.

Also, what about Silica Systems, who claim to be big Atari Dealers, inviting you to come into their shop. Going in there, you can not see an Atari on Display, neither the ST or the Falcon. They don't even stock them in the showroom. Asking about an Atari produces funny looks.

I think it's time that the people that sell these machines have the right attitude. Those companies that are well into Atari...well done...it is because of you and the millions of users on the net, that having an Atari is enjoyable.

3325. ST Games for Sale rev 1

Newsgroup: comp.sys.atari.st
Date: 1993-12-10 15:36:50 UTC
From: dmk@air16.larc.nasa.gov
Message-ID: <2ea52i$qcj@reznor.larc.nasa.gov>
Source record: 196860

Hi netters,
Revision 1 Message -
Since posting yesterday, there have been additional revisions to this sale. First if you want to ship to Canada, I will charge 5 dollars more for shipping. Second, if you want COD, I will charge 5 dollars more for shipping. Finally, new games have been added to the top of the list and games that have been spoken for have been removed.
Original Post Message -
I have the following games for sale. Each one sells for 5 dollars and that includes shipping in the continental USA. There is NO warranty with these games. If you want me to try them on my Atari STe v1.62 TOS before sending them out, please let me know. Please be advised that if you do ask me to check them out, I may not be able to ship this month (Christmas is a VERY busy time for me).

Kick Off 2
Bloodwych
King's Quest, Quest for the Crown
Battle Command
Orbiter
Barbarian
Corruption
Championship Wrestling
Final Assault
Project Neptune
Projectyle
Killing Cloud
Team Yankee

Battletech, The Crescent Hawk's Inception
Sherman M4
Wayne Gretzky Hockey
Magic Fly
Speedball (no box)
Exterminator
Damocles
Driller
Powerdrome (Box is beatup)
Leatherneck
Moebius
TechnoCop
Mickey Mouse the Computer Game

Super Cars
Menace
Blasteroids
Blockbuster

Adventure games (also 5 dollars apiece)
Manhunter, New York
Manhunter 2, San Francisco
Police Quest The Pursuit of the Death Angel
Police Quest 2, The Vengence
King's Quest II, Romancing the Throne
King's Quest III, To Heir is Human
Trinity
Stationfall

-- In the 10 dollar column (includes shipping) --
Challengers collection includes:
Stunt Car Racer
Fighter Bomber
Pro Tennis Tour
Kick Off
Super Ski
Wheels of Fire collection includes:
Turbo Outrun
Chase HQ
Hard Drivin'
Power Drift
Light Force collection includes:
IK+
Bio Challenge
Voyager
R-Type

Thanks,
Daniel Koppen

|> that !!
I've all but given up on Dixons.
I used to make a pest of myself, loitering around the computer section (well, I have to get my kicks somewhere) and when people asked about the Sts, I would correct the salesman. There were just *so* many people that came into buy 1040STe Curriculum packs that got told to buy Amigas instead. The reasoning was stuff like "You can't add extra memory or a hard disk to an Atari", "The free educational software is rubbish. it must be otherwise it wouldn't be free", "You can't get serious software for the Atari" etc. etc. ARRGHHHH!!!

|> And this is a salesman. Where do Atari stand if the people selling their
|> computers are like this.
Exactly.

|> Also, what about Silica Systems, who claim to be big Atari Dealers, inviting
|> you to come into their shop. Going in there, you can not see an Atari on
|> Display, neither the ST or the Falcon. They don't even stock them in the

This pisses me off. Silica just about built there empire on the back of the 2600 and 400/800 series. Now they just don't want to know ehen it comes to Atari. None of the shops have staff that know about Ataris, only Amigas and sometimes PCs.

|> I think it's time that the people that sell these machines have the right
|> attitude. Those companies that are well into Atari...well done...it is because
|> of you and the millions of users on the net, that having an Atari is enjoyable.
Very true. it's just a matter of education. At the end of the day though, it's not worth the shops time releasing staff on courses to learn about the machines if it means they'll recommend a cheaper machine with a lower margin than a PC with a much bigger margin.

|> Any compiler available for STOS? Is the company that makes this language still
|> in business? Any PD compiler on ftp sites anywhere?
AFAIK there is no PD compiler. The proper compiler was given away on a magazine cover disk about a year ago along with the then current version of STOS. STOS is badly written and very unfriendly ie it breaks on every new version of the OS. As such, it's not really recommended for doing anything on that you expect to sell/distribute as PD. For your own use, it's fine though.

AFAIK you can still buy the STOS compiler in the UK.

> where Simon Poole is and how to send HIM money? ;-}

Simon no longer actively supports ST stuff (to my knowledge), but he did
perform some bug fixes and such to release the "final" Uniterm 2.0e015.
It is available only from chsun.chuug.ch (there is a note there asking to
not upload it to any other sites).

I am almost positive that UniTerm is freeware anyway. Simon's last email
address (that I know) is poole@chuug.ch. He might like a thank you note :-).

In fact, I am going to send him my yearly request to release the Uniterm
source and let me add Zmodem support, and a mode where his custom graphics
routines are disabled (so as to let Warp9/NVDI do the acceleration). Heck,
he might even say "yes" one day <grin>.

> My thanks again to Mickey Boyd for the Uniterm macros (gee maybe I should send

3332. Jaguar advertisement

Newsgroup: comp.sys.atari.st
Date: 1993-12-10 18:35:25 UTC
From: Dave Horowitz <DSH109@psuvm.psu.edu>
Message-ID: <93344.133525DSH109@psuvm.psu.edu>
Source record: 197000

I was just wondering how much advertising coverage
the Jaguar has gotten in other areas. I live in
Philadelphia, what I would consider a very large market
place. I have not seen one commercial on tv yet.
I would figure that since it was nearing Christmas
time, and the busiest shopping time of the year,
I might see something by now.

I actually bought stock in Atari when this whole thing
started, and saw it hit around 12 points a few weeks
ago. However, it is now presently in a steady decline.
I was wondering if this is due people getting discouraged
by the lack of advertising and selling shares.

Anybody else have feelings on this?

-Dave

Sorry I can't help you much as I am still only contemplating the
upgrade to Logic. However, you don't state which VERSION you have.
I know from the music press that there are guite a few updates for
Logic on thr Atari (I think they are shipping 1.7 now). Might be
worth chasing a newer version.

In the UK the upgrade deal Notator SL => Logic has been 225 pounds,
but according to Sound on Sound there is a special xmas upgrade

package, including tutorial etc, for only 100 quid. Might just go for that, but then I need and SM124 first, and a blitter, and from what u say probably a Falcon too.

Btw I would like to see more discussion on both Notator SL and Logic here. eg Anyone doing anything fancy with Softlink. Is there ANY way to use a printer on the SERIAL port with Notator (Ie turn off Notator spewing MIDI data out of the serial port).

And does Notator Logic have anything like softlink???

What was Cadtrack going after C= for? I don't remember the Amiga ever
using an XOR cursor...

I haven't really been following this thread, but you are correct that
RZ and SZ were written by Omen, and are distributed for free.

However, they do charge a fee if you wish to use RZ and SZ in your own
products (or if not a fee, they do not grant you full rights to the
code. I.e. it is not public domain).

] What about ST Zip? I've been using it for a while now, and don't use
] anything else (when compressing) any more. I don't know about its
] compression ratios, but its user interface is a dream to use (this from
] a hardened CLI/shell fan!). And at least it doesn't trash your hard disk
] every so often like Lharc used to.

ST-ZIP is okay, but due to huge header data, the resulting files are
usually bigger than their lharc counterparts. Also, Lharc (2.3x) is
a LOT (and I mean a LOT) faster!

I saw something in the 'whatsnew' file mentioning Minix, so maybe
2.32 supports XFS filenames!? (My german isn't quite good enough to
make out what it all said!)

ST-ZIP's interface however, is nice and simple! Even the local 'don't
have a clue's ' Can work it okay!

>Someone also mentioned about ICD's Rate HD not giving correct results.
>What
>program can I use then?

That's for Falcons and TTs. On STs, ICD's RateHD seems to give reasonable
results. On Falcon and TT SCSI, the transfer rate displayed is way too
slow for really fast drives (> 1500 KB/s GEMDOS read transfer rate).

For "real world" GEMDOS read/write tests, use HOW-FAST.PRG.

RH>in the United Kingdom or in Germany (if they've got any).

German dealers hardly now that the jaguar exists! The last time I went to
my
dealer, all they could show me were some GIF pictures of the console. From
the look of it, ATARI-Germany hasn't released more information yet.

Ciao,
Arne

>AFAICR the binding just points the intin point in the control array to
>the
>string that you pass.

Nope, the string passed to the binding is a null-terminated set of
characters, with no explicit length information.

The intin[] array is an array of 16 bit integers, to where the chars have
to be copied. The length is passed as a separate parameter.

fnjah@aurora.alaska.edu writes:

>Does Oxyd for the Falcon require an SVHS monitor? I can't seem to get it to
>work on my monochrome, RGB or tv without being in black and white with a
>bunch of wavy lines going everywhere.

OXYD FALCON/TT does only work in 640*480*16. OXYD Colour does only work
in 320*200*16. OXYD mono does only work in 640*400*2. All of these
versions work on the FALCON, but you should boot from floppy in the
correct resolution (set by BOOTCONF.PRG or NVRAM.CPX).

Bye,
Knarf

Help!!

I have found that if if I have more than four partitions on my drives
Diamond Back will not recognise the information and the partition
hard drive option screen is all corrupt. Also when I try to save
SCSI information relating to my external drive Diamond Back crashes.

Thanks,
Dave Cook

Subject: Looking For Hard Drive For 520ST
Summary:
Followup-To:
Distribution: usa
Organization: University of Maryland, Baltimore County
Keywords:
Cc:

Hi All,

I'm looking for a 20-40M hard drive for my 520 st. Anyone with info
on where I can get one or what I would need to connect a third party drive
please post or email me at rbrand1@gl.umbc.edu.

Rob

ps. If at all possible, I would prefer not to pay more than $100. I
would be willing to pay for postage if somebody not in this area
had one for sale.

While were dreaming, why not a 68040/PowerPC combination with the Jaguar chipset for graphics and sound? Same idea as the old 400, 800, etc.; let each chip do what it's best at. Runs most ST, PC, and Mac software (3in1).

Gee, this is contagious...

Wow, I downloaded the Shareware Demo of 'Utopos' for the STE earlier today, it's been in the Ste/ directory of atari.archive.umich.edu for a while, but I only just noticed it. Impressive stuff this!

A great STE only game, with really smooth (I presume hardware) scrolling playfield, nice graphics, stereo music in the background.

If anyone is into games, and has an STE with at least 1meg of RAM (Who still has 512k!? :) then check this out, it's great fun, he's getting me '6 pounds'. (Very reasonable considering how good it is, more programs of this quality, at good prices make shareware worthwhile, mediocre programs at 3 times the price just don't 'sell' and then the programmers wonder why.....

3349. UPLOADED: MasterBrowse 3.3c

Newsgroup: comp.sys.atari.st
Date: 1993-12-11 07:02:40 UTC
From: mforget@elfhaven.ersys.edmonton.ab.ca
Message-ID: <H.eg.yvBhN8guJR6@elfhaven.ersys.edmonton.ab.ca>
Source record: 196836

December 11, 1993

~ ~ ~

* MasterBrowse no longer uses the "Edit Mode" for the handling of editable objects in dialog boxes. It has been replaced with a routine that looks and functions exactly like the system routine. In addition to the system keypresses, the following keypresses are valid:

Shift + Right Arrow = End Of Edit Field
Shift + Left Arrow = Start Of Edit Field

* MasterBrowse now has a Quick Document Access; by holding down the Alternate key and clicking inside any MasterBrowse window (or selecting "Quick Access..." from the "File" menu), a dialog box showing the last seven documents opened will appear. Clicking on any one of the documents in the list will cause that document to be loaded.

* MasterBrowse has a new font selector, which can handle an unlimited number of fonts and features a scrolling list of fonts and a scrolling list of point sizes (as well as an editable field for manually entering the desired point size).

* The MasterBrowse client shell has been improved; it will now allow you to have an alternate viewer. The alternate viewer is executed when the extension of the file passed to the client shell matches an extension from a user-defined list of extensions that the alternate viewer can process. This is extremely useful for people who want to be able to view pictures just as easily as they can view documents. Configuring the client shell to use an alternate viewer is a simple matter. The first step is to create an environment variable called "PICVIEWER":

setenv PICVIEWER=f:\bin\gemview.app

The next step is to create a list of extensions. You may enter a maximum of twenty extensions ("EXT1" to "EXT20") for the alternate viewer:

```
setenv EXT1=.GIF
setenv EXT2=.JPG
setenv EXT3=.IMG
...
setenv EXT19=.PI3
setenv EXT20=.GEM
```

Since different viewers have different command line formats, only one filename at a time will be passed to the alternate viewer (this does not affect you unless you have the client shell installed as an icon on your desktop).

* MasterBrowse is now more forgiving when it comes to block marking; you are no longer forced to click at the bottom of the line.

* There are four new options;

1) AutoSave - When this button is selected, your options will be saved automatically when you exit MasterBrowse.

2) AutoSave Batch - When this button is selected, the current documents in memory will be written to a MasterBrowse batch file. The next time

MasterBrowse is executed, the batch file will automatically be processed and your documents will be opened.

3) Confirm - When this button is selected, MasterBrowse will ask for confirmation when you leave the program.

4) Movement Base Keypad - This option allows you to set which keypad uses the movement base (the cursor keypad or the application keypad).

* The printer control code facility has been expanded; you can now enter up to four codes (separated by spaces) for the starting code, and four codes for the ending code. You do not need to include the escape code (decimal 27) since MasterBrowse will automatically send it to the printer before the first code.

* A minor problem with the Edit Mode was fixed; the cursor was not being placed on the edit line.

* MasterBrowse no longer displays the message that "the top window is not a MasterBrowse window or there are no MasterBrowse windows open at this time".

* Deja Vu! This bug was fixed, unfixed, and is now fixed again; selecting "Jump -> Block Start" will no longer jump to the end of the block, and selecting "Jump -> Block End" will no longer jump to the start of the block.

* A problem with the window "fuller" was fixed; clicking on the window "fuller" will not either minimize the window, or maximize the window. Previously it would only work properly if there was only one window open.

* The font selector will no longer "zero" the point size field when a new font is selected.

* A small problem with the "Find...", "Find Next", and "Find Previous" functions was fixed. When no more occurences of a string could be found, the last string found would be un-highlighted. This is no longer the case.

* The "modal" (system) alert boxes were not being displayed properly by MasterBrowse; some would contain a trailing "|" character, and all alert boxes that should have had two buttons only had one button.

* MasterBrowse now has faster searching; when only one string is being searched for, it is 47% faster. When only two strings are being searched for, it is 24% faster.

* MasterBrowse can now display a progress bar when loading a file, searching a document, printing/saving/clipping a block/document, and while creating a document batch. If you do not want MasterBrowse to display progress bars, you can turn this option off by deselecting the appropriate button in the "Display Options" dialog box.

* The MasterBrowse Client has been vastly improved; the new version allows you to display multiple files with the alternate viewer. Also, when given a list of filenames, the MasterBrowse Client will now sort the list into two lists (one list for files dealt with by MasterBrowse, and one list for files dealt with by the alternate viewer). After the files are sorted, the MasterBrowse Client will call the neccessary programs to display the files. Programmers; if you have an Internet electronic mail address, and want the source code to the MasterBrowse client (which can be adapted for any program), send me a message. I will be more than happy to give it out. The source code is heavily commented, in english.

* A bug was fixed; MasterBrowse no longer bombs if the resource file could not be found.

* A bug was fixed; MasterBrowse would try to create a pipe if the AES could handle more than one application at a time, when it should have been checking if MiNT was installed and the AES could handle more than one application at a time. This caused problems for people who use Mag!X, MultiGEM, and Geneva.

* A bug was fixed; MasterBrowse would bomb under TOS 2.05 if a configuration file was found on the disk AND MasterBrowse was called as an installed application. (It was actually a faulty library routine that caused the bombs.)

~ ~

Everyone who owns a computer has, at one time or another, needed to view the contents of a text file. The text file viewer supplied with Atari computers will allow you to do this, but it is lacking in many respects.

MasterBrowse is a replacement text file viewer for any Atari computer, in any resolution with a size greater than or equal to 640 X 200. It offers many features that the Atari text file viewer does not:

o MasterBrowse works with all operating systems, including MultiTOS. It should also work with MultiGEM, Mag!X, and Geneva. Under MultiTOS, MasterBrowse will even create a pipe so that other programs can tell it to open and display files. MasterBrowse will also use the Drag & Drop protocol, so a file/icon can simply be dropped on a MasterBrowse window to be displayed. MasterBrowse can also communicate with itself (to avoid loading more than one copy of the program at a time -- the client-program that MasterBrowse uses will simply tell the currently loaded copy of MasterBrowse to display the files instead of loading another copy). The MasterBrowse client program can also call an alternate viewer if it is passed a filename that MasterBrowse cannot process.

o MasterBrowse has an extremely fast GEM user interface, which makes use of raster copy screen updates, GDOS fonts, SpeedoGDOS fonts, pull down menus, windows, optional non-modal dialog boxes (and

non-modal alert boxes), colour, progress bars, and more. MasterBrowse also provides user-configurable keyboard shortcuts for every single function.

o MasterBrowse can use the command line (of course) to open documents (or open a document batch). The ARGV, xArg, and standard command line formats are supported.

o MasterBrowse allows you to have a virtually unlimited number of documents open at the same time, restricted only by the number of free window handles and the amount of memory available.

o If you do not like the default keyboard shortcuts for menu entries, MasterBrowse will allow you to change them!

o MasterBrowse provides you with a Quick Document Access feature found in no other program. With this feature, you can instantly load any of the last seven files that have been opened (in case you need a document again after closing it).

o MasterBrowse allows you to (optionally) save your options automatically when you exit the program, or even save a document batch that will automatically be loaded the next time you use MasterBrowse.

o MasterBrowse allows you to use all of your familiar movement keys. You can use the arrow keys, the application keypad, or the space bar and the return key.

o MasterBrowse allows you to move in any direction inside a document, as you would expect. What you might not expect is that you can tell MasterBrowse how far it should move when the movement keys are pressed. How about moving two lines down instead of one? Or perhaps three lines suits you better?

Do you still want more? Keep reading.

-You can jump to a specific line, a specific page, the start of a block, the end of a block, or any of ten personal "bookmarks" that MasterBrowse supplies for each window.

o MasterBrowse allows you to move through a document (by lines or pages) using a special Quick Scroll Mode. It uses the shift, control, and alternate keys so that the scrolling speed is not limited by the key repeat speed.

o MasterBrowse also offers you the ability to search for up to three strings at the same time inside a document (case sensitive or case insensitive), starting at the top of the document or the current position. If a search is performed starting at the current position within the document, MasterBrowse can be told to search in forward mode or reverse mode. After the string is found, another command may be used to find the next (or previous) occurrence of the string. When strings are found, they are placed in the centre of the screen and highlighted.

o MasterBrowse also has block functions. You can mark a block off, and then save it to disk, print it, or write it to the clipboard. You can decide how the block is marked on the screen. MasterBrowse can also be told to remove the block markers after a block operation is completed. Blocks are marked using the -MOUSE-. More? A block can even be extracted from a larger document and placed inside a MasterBrowse window!

o MasterBrowse is a master printer. It can print a document (or a block) with page headings, page numbers, line numbers, a description of the file or block, or a combination of the four. It can even print an identification string for those people who share a printer between more than one computer. You can also save a block to disk (or the clipboard), with all of the same options available. MasterBrowse can also be configured to use the special features of your printer, such as bolding, italics, and underlining.

o MasterBrowse will allow you to write documents to the disk, with all of the formatting options available for printing/writing blocks.

o MasterBrowse gives you complete control over your windows. You can cycle through them, change their titles, shrink them, close one, close them all, or get information about them all from the keyboard (or the mouse). MasterBrowse also allows you to remove the vertical window scroll bar, the horizontal window scroll bar, or both scroll bars. A window that has no scroll bars can scroll more than twice as fast as a window that does have scroll bars. In addition, each MasterBrowse window can have different scroll bar settings. The size of a window can be changed by clicking in the bottom right-hand corner of the window, even if the window does not have a "sizer" gadget.

o MasterBrowse saves the positions of the first seven windows (if you want it to), so you have complete control over where your documents appear and how your screen looks.

o MasterBrowse allows you to load and save different configuration files.

o MasterBrowse allows you to load and save bookmark lists.

o Every window has a set of block markers and a set of ten bookmarks to itself.

o MasterBrowse supports batch files! If you use a certain group of documents often, just load them up and tell MasterBrowse to create a batch file. One double-click on the batch file, and they will all be loaded again.

o MasterBrowse also has support for the clipboard! A block can be written to the clipboard (with or without formatting) or the clipboard can be read into a MasterBrowse window.

o MasterBrowse allows you to interface (transparently) with as many as four external archivers, so that you can save space by storing your text files in a compressed format.

The features listed above barely scratch the surface of MasterBrowse!

3350. Re: Jaguar advertisement

Newsgroup: comp.sys.atari.st
Date: 1993-12-11 07:07:04 UTC
From: STIRRE31@MAINE.MAINE.EDU
Message-ID: <93345.020704STIRRE31@MAINE.MAINE.EDU>
Source record: 196924

Well, I don't know if your area would be hit by the television
ads for the initial release, but I've heard from many others that
have seen tv ads. Some of them actually sound clever. As
for as national stuff, the Atari print ads are in gaming
magazines (GamePro, Electronic Games). Also exciting, is the
news that Cybermorph was named EG's game of the month for
December (just in time for the holidays :)). Atari's
stock probably went down to represent the true value
of the company. They have not turned a profit in a while
and their sales have steadily decreased. Although the
Jaguar looks promising, it is hard for investors to
ignore this, I would suppose. On an up-note, the Jaguar
has been well received and Atari has been commended by
many for their handling of the switchbox debacle.

Well, since the Jaguar is only on sale in SF and NY, it would make sense for
Atari to only advertise in those areas. :) THis is and always has been the p
plan. Jaguars will be on sale nationally starting the end of January. Expect
to see advertising then.

eric,

I guess I don't understand why you think computer software is like some kind of appliance. If it were, there would be patents on it, not copyrights. A more valid comparison might be with a video, or a CD, or even a book. All of those are expressions of intellectual property, and all are covered by copyright instead of patent. When was the last time you rented a video, didn't like it, and got a refund? Or bought a CD and returned it because you didn't like the music? Or bought a book, read it and returned it for a refund because you didn't like it? Those are situations similar to buying software. It is your responsibility as a consumer to make your purchases intelligently. It is not the responsibility of the software publisher/author to give you the results of their/his/her labor without compensation. If you don't know enough about a program, it's simple. DON'T BUY IT. If you make an uninformed purchase, you have only yourself to blame. Your option is to sell it for whatever you can get for it, or simply live with your bad choice. To expect the publisher/author to give you your money back is ridiculous. _You_ made the choice.

However, I will say that I think software authors should create demo versions of their software, so you can give it a 'test drive' before making the decision to purchase it or not. That makes it easier for consumers to make informed choices. But, when you get right down to it, you have to deal with your decisions. The good ones are easy. The not-so-good ones, well, I've got two shelves of games that I've purchased and played once. It's nobody's fault but my own.

FSCK is available since 0.60 i think. I use it once a month.
DEFRAG and DEFRAG2 are available (Defragmentation of V1 and V2 FS)
I used it once (without problems) and will repeat it from time to time.

3354. AVI player for Falcon?

Newsgroup: comp.sys.atari.st
Date: 1993-12-11 10:40:37 UTC
From: ilaskey@cix.compulink.co.uk
Message-ID: <CHv9np.CAs@cix.compulink.co.uk>
Source record: 196917

Is there an AVI player for the Falcon either PD or commercial?

I have the FLI player which works very nicely so I'd have thought it's quite possible to do.

There are at least to programs that support the new Stylus features
DVI 201 (GEM-based DVI Driver, likes MiNT) has a special Stylus Driver
GS 2.6.1 (inofficial beta release) support ESC/P2 printers like the Stylus

This mode_def has been posted for the Sylus printers (not tested)

Whatever gave you THIS IDEA? The Medusa is an own custom design, the ROMs
are a versioyn of TOS 3.06 which is licensed by Atari Benelux! So it's totally
legal.....unless there is some flaw I am not aware of.

Also, MultiTOS works fine on it (and Mag'X) so that you can boot via Disk
as well.

>

The internal IDE port has 50 pins... but it only use 44 pins...

Is it 40 pins connectors for 2,5 inch IDE????

Isn't it 40 pins connectros for Standard IDE!!!

The connectors for 2,5 inch IDE has more pins but are smaller in size.

: |>
: |> When queried about, the salesmen just laugh in your face...You don't wanna buy
: |> that !!
: I've all but given up on Dixons.
: I used to make a pest of myself, loitering around the computer section (well, I
: have to get my kicks somewhere) and when people asked about the Sts, I would
: correct the salesman. There were just *so* many people that came into buy 1040STe
: Curriculum packs that got told to buy Amigas instead. The reasoning was stuff
: like "You can't add extra memory or a hard disk to an Atari", "The free
: educational software is rubbish. it must be otherwise it wouldn't be free", "You
: can't get serious software for the Atari" etc. etc. ARRGHHHH!!!
:
: |> And this is a salesman. Where do Atari stand if the people selling their
: |> computers are like this.
: Exactly.

I agree totally. Atari machines are always pushed to the back, particually
now the console market is so rampent. Which is why I wish Atari would get
a move on with the UK release. (Far superior machine IMHO) ;)

:
: |> Also, what about Silica Systems, who claim to be big Atari Dealers, inviting
: |> you to come into their shop. Going in there, you can not see an Atari on
: |> Display, neither the ST or the Falcon. They don't even stock them in the
: |> showroom. Asking about an Atari produces funny looks.
: This pisses me off. Silica just about built there empire on the back of the 2600
: and 400/800 series. Now they just don't want to know ehen it comes to Atari. None

This was true back in 89 when I bought my ST. Silica had only 1 ST on display
compared to the 3 Amigas. I've never been a big fan of Silica, there have
always been cheaper places to buy machines from, even their y so called customer
back up is lousy. My ST broke down 8 months after I bought it. I rang Silica
to be told, "I'm sorry sir, we'll have a van round to pick it up tomorrow"
Did they come? No, it took nearly 2 weeks, I had it fixed myself and told the
guy when he turned up he'd wasted his time.

: of the shops have staff that know about Ataris, only Amigas and sometimes PCs.
:
: |> I think it's time that the people that sell these machines have the right

: |> attitude. Those companies that are well into Atari...well done...it is because
: |> of you and the millions of users on the net, that having an Atari is enjoyable.
: Very true. it's just a matter of education. At the end of the day though, it's
: not worth the shops time releasing staff on courses to learn about the machines
: if it means they'll recommend a cheaper machine with a lower margin than a PC
: with a much bigger margin.

Unfortunately this is true, it's retail, so they're only
interested in making money. Why would they sell a lower price machine when
they can make a whacking great profit on selling lousy 386sx machines.
Many of the staff are part time anyway, which just adds to the problem.
It's not just computers either, ask Dixon's staff about anything, they'll
have to go and ask the manager.

Same machine, more memory!

The 520 has 512K of RAM and the 1040 1024K of RAM....

More memory you get, the better it is!

My advice:

Get a 4M 1040STe.... They should be quite easy to find...

: although the 1040 ST also has a built-in double sided drive.
: -scott tirrell

The 520ST came inseveral different models earlier in it's life,

520STF 512k s.sided drive no tv modulator
520STFM 512k s.sided drive with tv modulator
520STFM 512k d.sided drive with tv modulator (89 onwards (I think))

The STEs all have d.sided drives

(was there a 520STM with no internal drive??)

You won't get the gcc archive any smaller. It contains TWO > 1M binaries,
and no matter how you do it, binaries don't compress > about 60% (unless
they're FULL of text).

Don't bother downloading it. GCC's with 2.5.x version numbers don't produce
working 68000 code. :-(They include some weird optimisations for '030,
even in 68000 mode; AND the GNU folks are thinking of dropping 68000
support all together.

Just don't play it if you're suceptable to epilepsy, it can get quite hard to
see what's going on sometimes.
;-)

I quite like the bit where you get "RAVE!" in the middle of the screen and the
different bit of music, plus the Wayne's World "Excellent!"
sample.

Christmas Greetings, -Paul-

A friend of mine phoned Atari UK yesterday who said the Jag will be launched in the UK on the 15th.

He also phoned Analogic, they will be selling them but don't know when they will be getting any in. I also read today that Silica will be getting some but again don't know
when.

HMV Tottenham Court Rd. will be getting 60, all of these have been reserved and in fact a they have more than 60 names down so they won't reserve any more. ;-)

Virgin (again London) will have some, "definately" next week apparently.

Christmas Greetings, -Paul-

I'd like to disagree with you Hutch. I still contend that _Atari_ is
the main reason developers are dropping like flies. They seem to have
gone to great lengths to destroy their dealer network, alientate their
developers, and drive their users around the bend.

> The trouble is, in the REAL world, it just doesn't work that way. Don't get
> mad at the developers... get mad at the pirates who make life tough on us all.

And save a healthy dose of that anger for the people responsible for the
poor Atari market... Atari themselves.

There shouldn't be any problems, as the Stylus 800 is 100% compatible with
the Epson LQ printers and the ESC/P2 command set... You can just use any 24
pin LQ driver with it.

Archie doesn't allow you to search for certain keywords, you must know the name (or at least part of it) of a file in advance. I don't know if the proposed database will allow a keyword search, but if it does, it would have a major advantage over archie.

I have an old (1986) Atari ST which I no longer use, and is
not worth a great deal. If a non-profit organization or
school is interested in this system, please let me know.

Details:

Atari 520 ST
720K External Floppy
SM-124 640x400 Monitor
20 Mbyte SH204 Hard Drive
512K Ram, expanded to 2Mbytes (additional 2Meg of chips)
all power supplies, cords

WordPerfect
Laser C & Source Debuger
Personal Pascal
Flash
Flight Simulator

(all software with original disks and manuals)

I have not used this system in a while, but last time I used
it, it worked. (If not, I am happy to offer a double-your-
money back guarantee).

If interested, please email me at:

asm@world.std.com

3378. IMPORTANT: Don't buy "GOAL!"

Newsgroup: comp.sys.atari.st
Date: 1993-12-12 00:53:59 UTC
From: am136@FreeNet.Carleton.CA
Message-ID: <CHwD5z.I6D@freenet.carleton.ca>
Source record: 196943

I bought "Goal!" today. I wouldn't recommend anybody else do so until a couple of little problems are fixed. (Note: these problems occurred on a 4Mb STE but that shouldn't really account for them.)

Episode 1:
3 minutes each way, Eintracht Frankfurt (me) vs Real Madrid (computer). With about 1'15 left in the first half, an opponent puts the ball out for a throw-in. The game zooms out to show more of the pitch and promptly crashes: the pitch changes to a solid green colour and the touchline appears on the other side of the screen. I have no option but to switch off the ST.

Episode 2:
While choosing my options, the game bombs and returns to a strangely-coloured desktop. Moving the mouse has no effect, but CTRL-ALT-RSHIFT-DEL reboots.

Episode 3:
While choosing options, I deliberately move the pointer off the bottom of the screen. It crashes as in Episode 2 above.

Episode 4:
I give the game one more chance. 3 minutes each way, Sheffield Wednesday vs Nuernberg. With 2'35 to go in the second half, the display zooms out to show the opposition's goalkeeper kicking the ball out. It crashes as in Episode 1 above.

Needless to say, this makes it totally unplayable. When I pay #25.99 I expect them to have tested the damn thing. I don't think it's a faulty disk because not limiting the pointer's range is a fairly basic programming error. I'll be sending the disk back to Virgin for a replacement in the hope that they have produced a working version by now.

This is the single most bug-ridden piece of software I have ever seen. I am absolutely astounded.

DO NOT BUY THIS GAME.

Stephen
ps save yourself #26 and compile this instead:

I first run AHDI 6.03 and later AHDI 6.06 on my Falcons internal IDE. Then 6.061 came out so I installed it on my C: partition. It was much slower! I changed back to 6.06 again. Did I do something wrong or is this how it's supposed to be? Btw, I've never done a re-format.

In <931211.12878.BIBLINSKI@delphi.com>, Gordie Meyer ATARI UNITED cofounder writes:
>eric,
>
>I guess I don't understand why you think computer software is like some kind of
>appliance. If it were, there would be patents on it, not copyrights.

let me state up front that I consider adding software to a computer
is creating an appliance. you can have a cad/cam appliance, word
processor appliance, drawing appliance all conceptually no different from
an oven, food processor, of vcr. the only difference is that
computer hardware changes its appliance face when you change it's
software part.

and as an aside, software is protected by patents, trade secrets, as well
as copyrights just like other appliances, consumer goods, and services.

> A more
>valid comparison might be with a video, or a CD, or even a book. All of those
>are expressions of intellectual property, and all are covered by copyright
>instead of patent. When was the last time you rented a video, didn't like it,
>and got a refund? Or bought a CD and returned it because you didn't like the
>music? Or bought a book, read it and returned it for a refund because you
>didn't like it?

lets look at your assertation that sw is more akin to a video, a CD or
a book.

You can rent videos at low (2-4$) cost or borrow them from libraries.
mistakes don't cost too much. try before buy option exists.

Because CD's are more expensive, I don't buy a CD unless I've listened to
it a couple of times or already know the music from some other low
cost source. I suspect other consumers act like I do because CD stores
now have listening booths and/or offer no-risk trials for select music.
again, try before buy or refund option exists.

like renting videos, buying books can be low risk. my public library
had many books for lend no cost. my local mall book store offers a money
back offer on all in-stock books (paper and hard cover), they have
a cheapie bin (under 5$) and frequently I'll read a chapter or two in
the store. again, try before buy or refund option exists.

so if software is like books, videos, or CD's, I should be able to
rent, or borrow a copy before buying. right?

> Those are situations similar to buying software. It is your
>responsibility as a consumer to make your purchases intelligently. It is not

>the responsibility of the software publisher/author to give you the results
>of their/his/her labor without compensation. If you don't know enough about
>a program, it's simple. DON'T BUY IT. If you make an uninformed purchase,
>you have only yourself to blame. Your option is to sell it for whatever you
>can get for it, or simply live with your bad choice. To expect the publisher/
>author to give you your money back is ridiculous. _You_ made the choice.

you are right that I must make intelligent purchases and I do not expect
to get something for nothing. If there is any uncertanity, and I can't
return it, like you suggest, I don't buy it. (software loses)
however, there are basic consumer rights (product works as advertised,
refund rights, etc) that software producers violate time and time again.

If you applied the software model to buying jeans, you probably would
end up with jeans that have one leg, no belt loops and a fly that sticks.
you also have to pay for them before you can try them on and if they don't
fit, no exchanges or refunds! on the bright side, you can upgrade your
jeans to V2.0 for a small extra cost which will get you 5 belt
loops, numerous cloth fixes and a discount on the upgrade to V2.5 which
will give you 3 legs if there is enough consumer demand. however, the
fly still sticks.

If consumers demanded the same rights as they get when they buy a pair
of jeans, things would get rather interesting rather quickly...

>However, I will say that I think software authors should create demo versions
>of their software, so you can give it a 'test drive' before making the decision
>to purchase it or not. That makes it easier for consumers to make informed
>choices. But, when you get right down to it, you have to deal with your
>decisions. The good ones are easy. The not-so-good ones, well, I've got two
>shelves of games that I've purchased and played once. It's nobody's fault but
>my own.

demo's are usually not good enough otherwise there would be more
consumer demand for them.

As for your two shelves of bad fit games, if they were any other
consumer product you would have been able to return them. you should
not have to live with a faulty or ill fitting product. why do you put
up with it? why do you let software vendors get away with stealing
your hard earned money?

-------- having said all that...

instead of flaming me about how software is different, why don't we put
our noggins together and figure out how to make software just
another returnable consumer product? remember, in most peoples eyes,
the computer is just another appliance! for a hint of where I'm
headed, check out Jeff Raskin's article in the latest "Wired".

Source record: 196949

eric,

<sigh> I didn't intend to flame you for your opinions about software being akin to an appliance. I only meant to educate you. Unfortunately, I failed in my attempt.

While you correctly stated that you could rent or borrow the three examples of intellectual property I used (CDs, videos and books), you failed to address what happens when you actually buy them. If you try to return a CD because you don't like the music, your CD shop will tell you tough luck. Why? Because you can easily duplicate the music. If you buy a video, and try to return it because you didn't like it, you're in the same boat. The same goes for any book you buy. Whether you can rent or borrow doesn't change the fact that the creator of intellectual property doesn't guarantee your satisfaction. Maybe someone in between you and the creator will, but the creator has already been compensated for his/her/their work by that time.

When you rent a video, you are not the purchaser. Someone else made that buying decision, and if the movie bombs, they eat the loss. They can't go back to the video producer for a refund. When you buy a piece of software, and it 'doesn't fit', you eat the loss. It was your decision to buy it.

I'm all for developing means of better educating the software consumer. You say that demos are usually not good enough. And that's the reason there isn't more consumer demand for them. I'd venture to say that the reason there isn't more demand for them is because too many computer users prefer trying a pirate copy of the program as a demo... Why do the software authors let pirates get away with stealing their hard work? Why do they put up with it? Oh, I forgot. That isn't stealing. It's only 'testing'. Unfortunately, enough 'testing' will drive a programmer to leave the platform for greener pastures. 'Testing' hurts the developers. Period. How long would you let yourself be hurt before you did something about it?

: I'm curious what people think about the above. Thanx for any tips.

: --- Mike

Joystick extendors are quite easy to make ;) All you'll require is:

1. A 9 pin D connector (male)(plug)
2. A 9 pin D connector (female)(socket)
3. Wire. (Length up to you, must have 9 cores)
4. Shells for the D connectors.

Then all you have to do is wire the male to female pins 1-1, 2-2, 3-3, etc
They won't look as nice as shop bought, but hey, you'll save a fortune ;)
(Be careful when wiring that you don't short pins, also, pin 1 on the male
is the opposite side to the female when you hold them the same way round,
look for the numbers moulded into the plastic on the connectors)
(Oh, just thought of something else, check to make sure the Ds aren't too wide
the moulded plugs are quite thin (the actual connection will be the same
just the rest may be a bit wider) I can't remember the gap between ports)
Same goes for the shells!

Martin.

I collected Silver Surfer, Punisher, Punisher: War Journal, Thor, The
Incredible Hulk, and about 8 other titles (some smaller some as big as the
previous) in the mid 80's all the way through about early '92 and I can
distinctly remember being interrupted by center-spread advetisements for the
LYNX in many of the titles mentioned.

Regardless of the results, Atari, Corp. did advertise pretty widely to the
comic-book market.

>Do you know which version of AHDI that is the fastest ?

All below 6.06 are about the same speed. The problem is that due to a bug in the Falcon GEMDOS AHDI < 6.06 may corrupt data when you're writing on a partition that has no capacity left. In this case AHDI < 6.06 destroys the partition above the one you're writing on. AHDI 6.06 fixes this bug. (Other drivers, e.g. HuSHI or HDDRIVER fix this, too, and are faster than AHDI 6.06.)

The Medusa is meant to be an ST/TT Compatible, which is also supposed to
have additional option to be Falcon Compatible with the DSP External
Board.

However with the ET-4000 the Medusa is already much more superior in
Graphics than a Falcon or TT (w/o Graphics Board).

Medusa works with TOS 3.06, don't know about the situation with the Eagle
yet as it is not available, to date.

Hi folks,

I upgraded to a Falcon recently and now my Mega ST (4Mb) is lying around. It has the overscan and Drive A/B switch modifications done. I am using the monitor so it will just be the CPU and keyboard for sale.

Anyone interested can make an offer thru' email. Thanx!

Ta Ta For Now,
Michael Fung

In <931212.13957.BIBLINSKI@delphi.com>, Gordie Meyer ATARI UNITED cofounder writes:
>eric,
>
><sigh> I didn't intend to flame you for your opinions about software being
>akin to an appliance. I only meant to educate you. Unfortunately, I failed
>in my attempt.

no flame taken. also, please don't assume that because I disagree,
you failed to "educate" me. I just hold a different opinion. at the
worst, we can agree to disagree.

>While you correctly stated that you could rent or borrow the three examples of
>intellectual property I used (CDs, videos and books), you failed to address
>what happens when you actually buy them.

hmm. I thought I did but fact still remains that I can try CDs, videos
and books before buying but I can't do that with software.

> If you try to return a CD because
>you don't like the music, your CD shop will tell you tough luck. Why? Because
>you can easily duplicate the music.

if I buy a non-returnable, non-defective CD, you are right. on the other
hand, if I buy one of Tower Records "special offer" CD's, I can return
it if I don't like the music. other CD shops in the boston area are
now offering similar options.

> If you buy a video, and try to return it
>because you didn't like it, you're in the same boat.

true. but I never buy unless I've seem the film a few times.

> The same goes for any book you buy.

only if you buy at the wrong shops.

>Whether you can rent or borrow doesn't change the fact that the
>creator of intellectual property doesn't guarantee your satisfaction. Maybe
>someone in between you and the creator will, but the creator has already been
>compensated for his/her/their work by that time.
...
>When you rent a video, you are not the purchaser. Someone else made that
>buying decision, and if the movie bombs, they eat the loss. They can't go
>back to the video producer for a refund. When you buy a piece of software,
>and it 'doesn't fit', you eat the loss. It was your decision to buy it.

from a consumer's perspective, who gets the money is irrelevent.
when the cost of a product crosses some threshold there is an expectation

that if the product is unsatisfactory, the consumer will be compensated
in some fashion. Usually the compensation takes the form of a refund.
the expectation of a refund is set by basic consumer rights in this part
of the world and refunds are also considered good customer relations.

while for the most part, I'm talking about the individual consumer,
in the corporate world, things play out a tad differently. vendors let
you live with the product and really try it out. If you get stuck with
a bad item, you get either a refund, or a much better deal on the
next product the vendor brings to your door.

>I'm all for developing means of better educating the software consumer. You
>say that demos are usually not good enough. And that's the reason there isn't
>more consumer demand for them. I'd venture to say that the reason there isn't
>more demand for them is because too many computer users prefer trying a pirate
>copy of the program as a demo...
because the offical demo's usually don't let you get a good feel for
the program.

one of the best demos I've encountered was for diamond edge. it let me
see what was wrong with my HD but it wouldn't let me fix it. the
only reason I am happy with diamond edge is because there were no
major surprises when I ran the real thing. it worked as advertised. on
the other hand one of the biggest dissapointments was diamond back. I
am upgrading to 3.0 in the hopes that I get a more usable program. if
the product is clearly defective, I will be returning the product and
asking for a refund. Any yes, I will keep the net informed :-).

> Why do the software authors let pirates get
>away with stealing their hard work? Why do they put up with it? Oh, I forgot.
>That isn't stealing. It's only 'testing'. Unfortunately, enough 'testing'
>will drive a programmer to leave the platform for greener pastures. 'Testing'
>hurts the developers. Period. How long would you let yourself be hurt before
>you did something about it?

somehow I get the feeling that we are talking at cross purposes. I hear
you talking about respecting developer intelectual property rights and I'm
talking about a consumer's right to a refund or compensation for a defective
or an ill fitting product.

instead of ranting about developer getting ripped off, figure out a
way that both developer rights and consumer rights can be protected.

> Thanks a bunch,
> Dan
> dc25@cornell.edu

I've found that the best way to transfer things between a MAC and a ST is to use the MAC program 'DOS Mounter'...

First format (or have a friend with an IBM do it) a disk as DS/DD 720K IBM format, copy all of your files to the IBM disk, then just pop it in under DOS mounter... it loads directly.

This sounds like a convoluted way to do things, but it does work. I doubt that you'll be able to retain the formatting and text effects from the original 1st_Word documents, so you might want to save them off on the ST as ASCII files.

If you don't have access to any of the above, other possibilities exist, such as as using a null modem cable and two communication packages to do the transfer... or perhaps uploading the files to a local BBS and then downloading them with the MAC. Again, make sure they are in ASCII format first.

The DOS mounter method is the easiest way I've found, but then again it helps when your neighbor has an IBM and the company you work for has MAC's with DOS mounter already...

The reason I do this is because we have a nice laser printer and pagemaker at work, so I can take any of my text files and dress them up a bit before printing them out. I would just use the ST for all of this mumbo jumbo, but I don't have a laser printer, and I only have a 1 meg 520ST with two DS/DD drives...

>insert in the drive?

Years ago a friend of mine inserted the plastic thingy into his 1040STf (which was pretty new at that time) before transporting it. Later when he removed the insert he found out that the read/write heads of his disk drive had been torn off by the insert! The entire drive had to be replaced which was rather expensive in 1988. His dealer told him, that this damage was not covered by the warranty since the plastic insert was *not* supposed to be replaced into the disk drive! Even though nowadays disk drives are not that expensive any more and you might be lucky to either not damage the drive or have a friendly dealer who is willing to replace the broken drive, I would highly recommend *not* to use the original plastic insert! If you really think, you need to protect the drive somehow, insert a floppy disk --- though from experience I would not think this neccessary.

But what about the XBIOS, 3.06 has no DSP support. And it's not only the
DSP that makes the Falcon a powerful music/sound computer, there's the
CODEC as well.

What I don't understand is why they didn't put TOS 4.04 in there. It has a
much nicer AES with popup menus and 3D objects and of course all the DSP
support.

There are newer versions that work with the TT. You can't connect an
SLM to a Falcon unless you use the new interface from R.O.M. Software
(which comes with custom Diablo and GDOS drivers).

>Unfortunately,
>Atari has dropped all support for this nifty utility.

The 'official' driver always was Diablo. I never got anything else with
my SLM.

>Also, does anyone have a _complete_ list of printer control codes for the
SLM,
>either in 'native' or Diablo emulation modes? I'd like to develop an SLM

The SLM has no 'native' mode (unless you choose to use the low level
ACSI commands).

>specific printer driver for my puzzle software but I've been unable to
locate

>if Scott Sanders' Atari Compendium book has that info?

All you need is the Diablo escape for graphics print. It should be
explained in the readme files in the Diablo archive.

>Dan
>dc25@cornell.edu

The answer depends on what type of disk drive your Mac has. If it has a
'SuperDrive' (a.k.a FDHD) then you can have the Mac format (using
Apple File Exchange) a blank disk for use with MS-DOS, which your ST can read.
Early SEs don't have a superdrive, newer ones do. If it doesn't, then you'll
need to connect the two together using a null-modem cable and use a comms
program to transfer the files across.

Have 1st Word save the file as plain ascii text (it might do that anyway,
I havn't used it in 3 years so I don't remember wether it uses plain text
normally, or its own special format), then transfer it (file cable or disk),
into the mac. Open MS-Word and open the file.

Depending on how it's transfered, it may have some "junk" inside of it, in
which case you should run the file through a program that knows what characters
to filter out. There are sveral PD/Freeware/Shareware ones that will do the
job.

This is just a cursory glance at the problem. If you need clarification
on any (or all) of the above, just follow up this article, or mail me.

Hope this helps.

Scot

The ROMs for TOS 3.06 are arranged to give 32 bit data. The ROM from the Falcon passes data on 16 bit wide bus, so it ain't compatible. This is assuming the Medusa will use a 32 bit bus, which it should. You can officially buy TOS 3.06 roms, but programming your own roms from the TOS 4.04 image sounds a bit dodgy to me.

Bye everyone....

==============================================================

UPoint is a UUCP-Package. It's available in two versions: 'UPoint-light'
is in the Public Domain, 'UPoint-medium' (with more options) isn't. The
'light'-version should be placed on some archive-servers for public re-
quests. The 'medium'-version you may get directly from the author (con-
tact for details - the 'medium'-Version will cost about 70,-DM and in-
cludes a german documentation).

Features :

- Fully GEM-based
- Easy GEM-based installation
- Window-dialogs
- Correct handling of background-windows
- Mail and News
- Very fast
- G-protocol with all window- & packetsizes, variable packetsizes
and changing packetsizes on bad lines (also handling SRJ-Pakets)
- Needs 1 MB, 640 * 400 Pixel, all colours
- Running under TOS ( >= 1.04 ), MTOS, Mag!X
- Running on ST, TT, Falcon
- Running on graphic-cards
- Implemented uudecode
- Supports MIME-standard
- Andalotmore ....

You can get more info from

Stefan Brusch
Am Bast 15
25335 Bokholt-Hanredder

brusch@eslapion.sh.sub.org

UPoint-'medium' has also :

- Handbook ( in german )
- MultiUser ( up to 8 users with password-security )
- Supporting free editable header-lines for news & mail
- Mailarchive for outgoing mails
- More options for news
- English version

and soon ...
```

- Supporting anon- und mail->news-server
- Adressbook
- Reference-List
- PGP
- Implemented btoa

If there's interest, I could post UPoint-'light' in comp.binaries.atari.st

3408. Geneva with Neodesk?

Newsgroup: comp.sys.atari.st
Date: 1993-12-12 21:59:52 UTC
From: dbyfield@outb.wimsey.bc.ca
Message-ID: <dbyfield.0kj5@outb.wimsey.bc.ca>
Source record: 196803

Can anyone tell me if using Neodesk as a replacement desktop with Geneva will give me any advantages that I can't get with Gemini or Terra Desk? I am refering to how Neo can enhance Geneva more than Terra or Gemini, not what a desktop in general can do. I feel that $70 is a bit much to spend for Neo if there are no Geneva related advantages.

It is a modified versioy nof 3.06, licensed by Atari benelux, exactly
what has been changed I cannot tell you, mainly because (DSP wise) the
DSP board is not ready yet, so we will see then.

Hmm...isn't it also possible to do that Software Wise? with Multitos. It
should work just fine like that too...

New this time:

- New release: The Horror of Rylvania!
ftp.gmd.de: if-archive/games/adventions/*/rylvania.*

ADVENTIONS' Unnkulian Unventure Series
Adventure Games for the 90's

"Unnkulia Zero hits the bullseye!" That's what Computer Gaming World had to say about our latest Unnkulian Unventure in their December issue. So if you're looking for top-quality interactive fiction comparable to 1980's commercial offerings, check out the Unnkulian Unventure series, available from an archive site near you!

In _Unnkulian Underworld: The Unknown Unventure_ you play the part of Kuulest's slave, and must recover the Orb of Studosity from the evil Unnkulians. Kuulest, the old geezebag, has died and left you with nothing to go on but a cryptic message about saving the planet. You'll encounter amazing Acme products, the infamous Guardian, those witty creatures known as Drolls, a giant beaver, and even the Dread Unnkulian Warrior. <Gasp!>

In _Unnkulian Unventure II: The Secret of Acme_ your adventure continues as you try to create some good press for yourself -- wouldn't want to fade into anonymous obscurity, now would you? Along the way, you'll find the answers to these compelling questions, and more:

o What happened to the Unnkulians?
o Why are Acme products so bad?
o What is this cheez stuff, really?

Plus, you'll get to explore Dawg Rock, a Duhdist Retreat, Acme's clandestine prototypes laboratory, and even pay a visit to Acme HQ.

In _Unnkulia One-Half: The Salesman Triumphant_, you'll play the role of a down-and-out Acme salesman, forced to work out of the Golden Dragon Inn, dangerously near Dread Unnkulia. Will you accumulate enough loot in this frightful backwater berg to turn your fortunes in your favor?

And, in _Unnkulia Zero: The Search for Amanda_, will you, the Valley King's most trusted warrior, rescue his Lady Amanda from the gruesome

clutches of the evil Unnkulians?

The Unnkulian Unventures have already gotten rave reviews from numerous adventure game connoisseurs around the world, so why not give them a try?

Other ADVENTIONS Games

The Horror of Rylvania

"The Horror of Rylvania" is true gothic horror in an interactive fiction setting. A radical departure from the light-hearted Unnkulian series, "Horror" is not for the faint-at-heart.

What you expected would be a fun outing in scenic Rylvania turns into a gruesome nightmare, with *you* playing the starring role. Find out what it's like to be alternately the source and challenger of evil in the tiny Eastern European province. Test your very moral fiber as you decide to damn yourself and save others -- or vice versa. "The Horror of Rylvania" will grip you like no interactive fiction ever has before.

Colossal Cave Revisited

"Colossal Cave Revisted" is a remake of the first major adventure game ever written: Colossal Cave, otherwise known as "Adventure." The original Adventure was written in FORTRAN by Willie Crowther and Don Woods, and had only a simple two word command parser. Its descriptions were so vivid, however, that it captivated a generation of computer enthusiasts and quickly became part of the "hacker lore."

ADVENTIONS' implementation of this classic features the same excellent full sentence parser our other games use, and comes with complete source code. For those new to interactive fiction, "Colossal Cave Revisited" is a must-have.

Colossal Cave Revisited is free, and comes with complete source code.

Where to Get Them

All our games are available for FTP from the if-archive at ftp.gmd.de. (Note that the site wuarchive.wustl.edu keeps a mirror of the if-archive in the mirrors directory.)

PC and compatibles (running DOS):

UU1: if-archive/games/adventions/pc/unnk1v30.zip
UU2: if-archive/games/adventions/pc/unnk2v30.zip
U1/2 + U0 demo: if-archive/games/adventions/pc/unnkhz10.zip
Colossal Cave Revisited: if-archive/games/adventions/pc/ccr.zip
Horror of Rylvania demo: if-archive/games/adventions/pc/rylvania.zip

Macintosh:

UU1: if-archive/games/adventions/mac/unnk1v30.sit.bin
UU2: if-archive/games/adventions/mac/unnk2v30.sit.bin
U1/2 + U0 demo: if-archive/games/adventions/mac/unnkhz10.sit.bin
Colossal Cave Revisited: if-archive/games/adventions/mac/ccr.sit.bin
Horror of Rylvania demo: if-archive/games/adventions/mac/rylvania.sit.bin

(These are MacBinary files.)

UU1: if-archive/games/adventions/mac/unnk1v30.sit.hqx
UU2: if-archive/games/adventions/mac/unnk2v30.sit.hqx
U1/2 + U0 demo: if-archive/games/adventions/mac/unnkhz10.sit.hqx
Colossal Cave Revisited: if-archive/games/adventions/mac/ccr.sit.hqx
Horror of Rylvania demo: if-archive/games/adventions/mac/rylvania.sit.hqx

(These are Binhexed Stuffit 1.5.1 files.)

Atari ST/TT/Falcon:

UU1: if-archive/games/adventions/atari/unnk1v30.arc
UU2: if-archive/games/adventions/atari/unnk2v30.arc
U1/2 + U0 demo: if-archive/games/adventions/atari/unnkhz10.arc
Colossal Cave Revisited: if-archive/games/adventions/others/ccr.tar.Z
Horror of Rylvania demo: if-archive/games/adventions/others/rylvania.tar.Z

Others:

UU1: if-archive/games/adventions/others/unnk1v30.tar.Z
UU2: if-archive/games/adventions/others/unnk2v30.tar.Z
U1/2 + U0 demo: if-archive/games/adventions/others/unnkhz10.tar.Z
Colossal Cave Revisited: if-archive/games/adventions/others/ccr.tar.Z
Horror of Rylvania demo: if-archive/games/adventions/others/rylvania.tar.Z

TADS now runs on lots of different systems. Because of this,
the files listed above are TADS .GAM-file only archives that
can be used with any machine that runs TADS. The tricky bit is
that before you can play the games, you need to get the TADS
run-time for your machine.

Fortunately, this isn't hard to do. Just grab the TADS
executable package for your machine from the if-archive:

Sun Sparcstation (SunOS):
if-archive/programming/tads/sparc-sunos.tads2exe.tar.Z

Sun Sparcstation (Solaris):
if-archive/programming/tads/sparc-solaris.tads2exe.tar.Z

Sun 3:
if-archive/programming/tads/sun3.tads2exe.tar.Z

DECstation (MIPS) running Ultrix:
if-archive/programming/tads/decmips.tads2exe.tar.Z

SGI (Iris/Indigo/Indy) running Irix:
if-archive/programming/tads/sgi-irix.tads2exe.tar.Z

Linux (386):
if-archive/programming/tads/linux.tads2exe.tar.Z

NeXT:
if-archive/programming/tads/NeXT.tads2exe.tar.Z

IBM RT:
if-archive/programming/tads/ibmrt.tads2exe.tar.Z

Amiga:
if-archive/programming/tads/AmiTADS210.lha
(beta)

Other Unix:

In the works!

The file How-To-Run-These-Games in the same directory gives
your more information.

NOTE:

The source to TADS 2 is not distributable. However, if your
machine isn't on the list yet, and you would like to volunteer
to port TADS 2 to it, send email about it to Mike Roberts
<mroberts@hinrg.starconn.com>. Porting to Unix-like systems is
fairly trivial.

Unnkulian Unventures I and II are shareware ($10 registration fee
each); registering gets you spiffy maps and agony-sparing hint sheets.

Unnkulia One-Half is free -- don't pay us for it!

Unnkulia One-Half comes with a playable demo of Unnkulia Zero and info
on how to get the complete version.

Happy adventioning!

Dave Baggett
ADVENTIONS

Internet: dmb@ai.mit.edu
Compuserve: 76440,2671
GEnie: ADVENTIONS

A Word About TADS

We at ADVENTIONS use a programming language called TADS to write our games. TADS is a product of High Energy Software, and you can get it via FTP.

TADS (and TADS goodies) are available for many systems from ftp.gmd.de. Look in the if-archive/programming/tads directory.

TADS is also shareware, and we strongly encourage you to register it if you use it, since we feel it is a powerful, innovative, and very inexpensive development system that deserves to be paid for.

3412. SC1224 Volume Problems

Newsgroup: comp.sys.atari.st
Date: 1993-12-12 23:42:35 UTC
From: STIRRE31@MAINE.MAINE.EDU
Message-ID: <93346.184235STIRRE31@MAINE.MAINE.EDU>
Source record: 196882

The other day while using my STe, the volume on my SC1224 went out of control. I had it turned all the way down, but the sound was still deafening. Since then, my monitor has quieted down a little, but is still noticibly louder than it should be. Does anyone know what might cause this? I would appreciate any help.
-scott tirrell

I think limited demo versions are FANTASTIC. If I'd seen a demo version
of TruePaint (which there is not) and the demo version of Prism Paint
(which there is), I wouldn't have wasted my money on TruePaint. As it is,
I now can't afford Prism Paint (my teachers told me never to account for
`sunk costs', but I can't justify buying another paint program when I've
just bought one).

TV Advertising is only for the test markets, New York and San
Francisco, so far, it's only been spotted in NY. (On Batman
The Animated series, among other shows.)

> I actually bought stock in Atari when this whole thing
> started, and saw it hit around 12 points a few weeks
> ago. However, it is now presently in a steady decline.
> I was wondering if this is due people getting discouraged
> by the lack of advertising and selling shares.

The market is driven by lots of hype. It seems natural for
a stock to be inflated by hype, and then drop to normal
levels, the same applies to the 3DO Company, who was up around
45 for quite some time, and has slowly dropped to around 30.

I have a Western Digital 1.05gig Hard Drive. Its 9ms, model Number is DSP3107. Its SCSI-II also I believe. I have a Mega/STe and want to use it with it. The prob I am having is I think its for portables (its a half height so may fit...) and I can only get it to power up if I stick it in my PC hooked to a Issapport scsI-II card. Otherwise it does not power up.. works fine in the PC but I want it in my atari... :). I have tried ICD v6.2.3 with a host adapter. I tried it hooking inside mycomputer, but am going to try hooked to the host and see.. Otherwise I guess I will try ICD and see what they say... thanx.

ghod! backing up 330mb onto floppies! get a tape :-)

the last time I publicly complained about DBII, bob l. rightfully pinged
me for not comming to him first. I expect that bob will send me
another piece of fan mail for this piece too.. :-)

however, I have sent bob l. 2 or 3 pieces of email with no response.
It hasn't been worth the hassle to phone, fax or snail yet but it will
if DB 3.0 does not work ok.

So, since you asked, here is a short list of complaints I have about DB:

awkward user interface (I keep getting stuck in the GUI thing :-)
the Diamond edge UI is good but Diamond back is so bad I have a
hard time believing the package came from the same company.)

I've lost a couple of backups from decompression failures. as
a result I don't compress on backup anymore.

minimal floptical support (to be fair, the package blurb says
it works with flopticals but not how well. bob claims multi-volume
floptical support will be present in 3.0)

incremental backups are barely useful IMHO. (bob and I differ
on this and he claims he is putting in 3.0 a type of incremental
backup that I consider more useful.)

no multi source volume backup (I expect to be able to
backup multiple source volumes onto multiple target volumes and
have restore put things back on the right volumes unless I tell
it otherwise.)

It's been a while since I used DB so I don't remember any more
problems than these although I'm sure there are some. I'm willing to
risk some more money on the next version but that's it. Any more
data losing errors like the compression one and I'm tossing Diamond Back
and will be looking at free alternatives like gnu tar+gzip or zoo.

Before DB, I was using something called Good Backup. The only reason I dropped using Good was because there was no flopticals support and the guy supporting it had left the personal computer software market entirely (for reasons having nothing to do with piracy).

So if you are looking for a good backup utility, I really have no place to point you because I do not believe that there are any good ones around yet. I'm hoping I'll be able to say good things about DB V3.

In article <CHyA7D.9Dq@csn.org> you wrote:

: I have a Western Digital 1.05gig Hard Drive. Its 9ms, model Number is

Actually I was wrong. Its Made by Western Digital (all parts said Western
Digital on them), Its actually an IBM 1052meg drive. Access time is
8.6ms. Model Number is 0662S12. It is SCSI-II BTW. I can only get it to
work on a PC hooked to a SCSI-II card. Its really wierd, it only powers
up when its asked what it is instead of when I flip the power switch... I
think I need to get the Link since i read the press release on it and it
supports SCSI-II If I recall... Otherwise I'll just get a Falcon030...

I called ICDs board but i guess it was full so did not save my message.
Does ICD have a GEnie or Compuserve account I can send InterNet mail too??

thanx

You need to find out what the jumpers on the drive are for. I recently installed a 330meg Fuji in my MSTE and it would not power up until I changed the necessary jumper. It was set to start with a software command from the computer. BTW, it was for a Compaq and reports as such when booted.

I just acquired a Mega ST and it seems to be missing a chip. The chip is designated "U12" and sits just to the left of the MMU chip (as viewed from the front of the board). It is a 14 pin chip. The board is designated "CA200019" and is populated for 2 mBytes. Can anyone tell what chip I need to put in? Better yet, can anyone supply me with a schematic?

Thanks
Jim

Well the votes are coming in, But I still want more ;)

A few further explanations:

Being released in 93, means only a version or update was released in 93.
This is to include such programs as Gemview.

The categories are only general guidelines. If you have a favorite text
processor and a favorite art package. Vote for the both. One will be ART and
the other Word Processing. No hassles.

If you want to nominate a commercial package go ahead. Please let me know
that it is indeed a Commercial Package.

Don't know the author? No problem, if it get's alot of votes I'm sure we
can find out who wrote it.

Also please include a brief statement on why you like the package. This
isn't necessary but would be nice.

OK? Great now take a moment and drop me a note. I really want to make
this a good representation of us Atari users. That means I need your help.
Lets show these authors we appreciate their efforts and maybe give us all a few
new packages to check out.

As before send your votes/nominations to:

ackerman.29@osu.edu

If you have any problem getting through to this adress please let me know
in the newsgroup.

Dan Ackerman
ackerman.29@osu.edu

Strange question, somehow. The Medusa is compatible with CLEAN applications
written for the 680x0 range of Atari computers. This means, you will face
SOME problems if you want to run some hacks on it (Spectrum 512 or similar).
In addition, many games and demos will not run (or does the Medusa have
a compatibility mode (68000@8MHz) ?).

3433. Problem with MagIX (booting phase)

Newsgroup: comp.sys.atari.st
Date: 1993-12-13 11:33:00 UTC
From: martin@risc.techem.ruhr-uni-bochum.de
Message-ID: <2ehjtc$mhb@rubb.rz.ruhr-uni-bochum.de>
Source record: 196805

Hi,

I have a problem with my ATARI system since I installed MagIx as an alternative operating system. I am using the Hushi hard disk driver (version 3.16) on a TT, with Hushi it is possible to boot your system from different partitions by pressing D e.g. while the TT is coming up. I have installed MultiTOS on volume C: and MagIx on D:. If I want to boot from partition D: the hard disk hangs after a short while before the booting procedure is complete. Even after several resets the computer won't work. It does work if i first boot MultiTOS from C: then reset it and after this pressing "D". Unfortunately, sometimes the TT is booting correctly with MagIx at the first time.

Does somebody have an idea? Maybe some imcompatibilty between Hushi and MagIX? Or must I install MagIx on C?
(I don't think that the behaviour is caused by an AUTO folder program because sometimes the computer hangs directly after the reset caused by the MagIX booter...)

Thanks in advance, Martin

Strange. AHDI 6.06 is slower concerning Falcon SCSI but if this applies to
IDE, too, I didn't check. It doesn't sound as if you did something wrong.

Hello!

A PDP subscriber sent me a disk containing a number of PD progs a
while back. Included on this disk was a program called TWIST or
TWISTER which seemed to be some sort of task switching program - but
I couldnt get it to work.

I had forgot all about it, when I was looking through some old
ST FORMATs and noticed an advert from HiSoft - advertising this
TWISTER program.

I wrote to HiSoft asking for some info on this product but never
had a reply. The question I put forward is:

What is TWISTER/TWIST by HiSoft?
How do you use it?
What ever happened to it?

Thanx in advance etc... etc.... etc.....

>
>-Paul-

I was at the Atari show last night in Haydock Park near Manchester. I new about it through ST apps a couple of months ago, and also from ther high street mags, that mentioned it. Also, if you are on the mailing list for Titan Designs, then you get a note telling you about the next show.

For the people who live in Scotland, and North East England, there is supposed to be a show in Newcastle I think 27 February and Glasgow on the 28 February.

And no, this is not a plug for any of the companies....I do not work for any of the Atari Dealers that were at the show....I just hope that someone from the big Atari companies reads this, and says...."We've got to reward this man", and then give me loads and loads of Hardware ;-)

I couldn't get there early, and by the time I did get there, Gasteiner were packing up. I got there 4.30 pm...the show was due to finish 6pm. Not many people there either when I got there, but the demos were quite good.

Got my Tower Case, too from System Solutions....only 140 pounds. Not bad is it? Well, it isn't "only"...it's quite a lot, but considering they cost about 200 pounds normally.

T28 looked impressive, and so did this Multitasking Operating system called SMS2.

I was surprised that Analogic or Ladbroke did not turn up.

Anyway, I was there for an hour or so, and got to talk to lots of people, in a relaxing atmosphere, not having to wait behind queues of people. But I think it would have been better if more people were there (Maybe there were).

There weren't many offers at the show. The tower case was quite good, though, but other stuff did not have much in the way of discounts. For example memory ipgrades, at the lowest for the STe, were 45 pounds for 2 Meg....this is normal price, especially for some of the dealers. Hisoft had some good deals....Lattice C 5.6 down to 120 from 170 pounds.

I would have liked to buy Multitos, but this was discounted by 10 pounds, and this was out of my price range, esp, as I had already spent some money at SSols.

Overall, it was a nice show, but I do feel that there could have been some more better offers off hardware and software. Saying that...I will definitely be going to the Next local Atari Show.

Danny.

>Doug
>

Unless there have been upgrades to Terradesk or Gemini that I am not aware
of, they still cannot run programs in multitasking mode. This means that
although they can execute one program, the shell itself becomes inaccessible
until the program that was run from it is exited. This will continue to be
true until they are upgraded to use the MultiTOS/Geneva shell_write() method
of running a program, instead of pexec().

NeoDesk 3.04 does not suffer from this problem. You should be able to find
NeoDesk 3 for substantially less than $70 at this point as well. We are
currently offering a clearance specail ourselves of $35.

If you are talking about a splitter, just put a 9 pin on one end and split it two the outer edges
of a 25 pin. You can have two devices plugged into the 25 pin side.
I did this, cause I couldn't find a splitter anywhere! I don't have
to lift up my computer to unplug the mouse and plug in a joystick.
Try Toad Computers, they always seem to have extra pieces. I got
some small stuff from them before.

I tried compiling MiNT 1.09 with GCC 2.5.6 (binary taken from
ftp.tu-clausthal.de) and got internal errors.
That was the first 2.5.* release i tried, now i'm back to 2.4.2
which works fine.

Should i upgrade to 2.4.4 (or 2.4.5) what ever the latest 2.4.*
release was or are there no major changes (bug fixes)?

Get a copy of Heat 'n' Serve C 1.4 - it's shareware and plenty sound enough to get you started. I started with it several years ago, and it still serves my needs! If you get on with C consider buying Lattice C 5.6. It's about the best (English documented) compiler available. HSC comes with several hundred K of manuals of disk, plus make, etc.

Now I think of it, I could really use a copy of the Dr Doodle source code. I heard it was available but was unable to find source anywhere.

Thanks in advance for any pointers.

Erlend.

Yuk, don't like that idea at all. 2 input devices connected to 1 port at the
same time? It would be much better to have a switch between 2 9pin Ds, much
cleaner.

What I meant, was this allows me to unplug easily. They both
don't have to be connected at the same time. I usually leave
them both plugged in with no problems. (3 years now).
Some games don't like the mouse plugged in at the same time.
It is a simple fix for me and it works.

Call up Seagate and ask for a jumper sheet. In fact, if they are like
Maxtor, you can actually get the information over the phone (via an automated
system). Try 1-800-555-1212 and ask for Seagate's 1-800 number. This has
worked for me in the past with several drive manufacturers.

3449. Mac 256k SIMMs

Newsgroup: comp.sys.atari.st
Date: 1993-12-13 16:47:23 UTC
From: pindar3@cix.compulink.co.uk
Message-ID: <memo.119831@cix.compulink.co.uk>
Source record: 196823

From Pindar user Ian McCall

Subject: _Mac 256k SIMMs
Hello.

I'm looking at the possibility of installing a SIMM board into my 520STFM. It's already got 1 Meg (the extra being soldered into the motherboard), a battery-backed clock and a hardware PC emulator inside the case, so firstly - will the board fit?

Secondly, if it does fit I'd be trying to use some 256k SIMMs taken from a Mac Plus (ie. no parity). Has anyone got any experience in using these with STs, or does anyone know what speed rating I'm looking for?

Please reply via email, since I don't actually read this newsgroup.

Cheers,
Ian

Please make 'Attn:<space>Ian McCall' the first line of your reply (not the subject) to ensure automatic forwarding to the correct Pindar user.

Source record: 196824

If could possibly be the fact that you are running on a 4 meg machine.
I remember when I used to run kick off and kick off 2, they would crash within
5 mins of running, always.
The way I got around it was by running a program to emulate a 1 meg STE.
I think it's called 1MEG.TOS or something like that. Anyway, once I'd done that
they worked without any problems. (same goes for player manager).

3451. Atari Lynx

Newsgroup: comp.sys.atari.st
Date: 1993-12-13 17:23:31 UTC

(Sorry if this is not related to atari.st but this is the only
atari newsgroup I can received)

Are there any ftp sites that has any Atari Lynx related stuff?
I just bought one for $30 and I want to know more about it.

don@vestek.com

3452. Atari Computers and stuff for sale

Newsgroup: comp.sys.atari.st
Date: 1993-12-13 18:10:08 UTC
From: tclark@hptc.mentorg.com
Message-ID: <1993Dec13.181008.25978@news.mentorg.com>
Source record: 196826

In case this didn't make it the first time...

I have the following for sale, I'll pay shipping in the US and will
consider splitting the shipping (50/50) elsewhere.

Package #1

Atari 400 with the following:
64K add on memory
(the upper 16K is 4-4K banks that are selectable)
Detachable "real" keyboard
1040 Cassette recorder
(this unit does work, though it has been a bit flaky. There supposedly
is a modification that can fix this)
1 set of Atari Paddles

Atari 400/800 SW

Atari Basic (cart)
Temple of Apshi (cart) - Explore the dungeons, thousands of levels!
Joust (cart) - An Atari Classic
Centipede (cart) - Another Classic
Eastern Front - My favorite, a war simulation of the German invasion
of Russia. You are the Germans and you must capture
Moscow. Several levels. I have all the Docs too.

Atari 400/800 Books

Atari Basic
Atari 400/800 Technical Reference - everything you ever wanted to know
about the hardware and bios.
Inside the Atari 400/800 - Another good reference on programming and using the
400.

Package Price - $75.00 (US)

Package #2

Atari 520ST with the following:
1/2 Meg Ram
354 Floppy Drive - External, Single Sided/Double Density
Hi Res Monochrome Monitor
1 Set of Atari Paddles

ST Software

Basic
Misc shareware - nothing too useful...

ST Books

ST Internals - a good guide to the internals of the ST
Midi Programming on the Atari ST - This book has lots of useful info on programming the ST for Midi use. It
includes the source for a midi sequencer.

Package Price - $175.00 (US)

I would like to sell everything as a package, but if you see something you like, make an offer.

Thanks

3454. CoNNect problems

Newsgroup: comp.sys.atari.st
Date: 1993-12-13 18:41:16 UTC
From: thopman@herman.cs.uoguelph.ca
Message-ID: <2eid0c$ff6@nermal.cs.uoguelph.ca>
Source record: 196827

I recently FTP'ed myself a copy of CoNNect, and from what I hear it's a great program. I can't try it out myself, because whenever I try to run it, I get an alert box saying "connect.prg must be in the actual directory.", and the program quits. I'm running it on an absolutely clean system, and memory's not a problem since I've got 4 megs. What does this mean, and how can I fix it?

Thanks...

Atari ST/STe/MegaSTe/TT030 and Falcon030 Compatible...

The Original game, ELITE, shook the computer games industry to its
foundations as the first 3D polygon space simulation back in the mid 1980s.
The game was an unprecedented success and grew to such cult status that
game's players formed their 'Elite Fan Club'. A feat yet to be repeated,
the standard was set and gave rise to a multitude of sci-fi simulation
'wannabees'

Now as popular as ever, this unique style of game has been taken to the
limit with astonishing FRONTIER - ELITE II.

The most eagerly awaited sequel to date, FRONTIER pitches you far, far
into the future to the year 3200. Civilizations have spread through the
Galaxy hundreds of light years from earth in all directions. Vast areas of
the Galaxy remain unexplored and with many thousands of worlds now settled
in the cosmos, a rich and varied life of adventure awaits.

Take on the role of a space trader known to moonlight as in
intergalactic mercenary and watch the Universe unfold before your very
eyes.

In article <2ehu8b$nee@titan.ucs.umass.edu>, stewart@titan.ucs.umass.edu (Bob Stewart) says:
>
>Unless there have been upgrades to Terradesk or Gemini that I am not aware
>of, they still cannot run programs in multitasking mode. This means that
>although they can execute one program, the shell itself becomes inaccessible
>until the program that was run from it is exited. This will continue to be
>true until they are upgraded to use the MultiTOS/Geneva shell_write() method
>of running a program, instead of pexec().

I'm just wondering something though. I have MultiGEM (as well as Geneva, etc - I like buying these multitaskers :-) and if I make Gemini an auto-run program, then MultiGEM will treat it like the main desktop, and will launch things from it fine (now if you try to exit Gemini after this...). I don't think it was quite as flexible if you ran Gemini from the normal TOS desktop though.

Curious about the different implementations used. (for overall future stuff, I'd go with the Geneva/MTOS world, but right now MGEM works a little nicer with Gemini, etc)...

Rob

(I have Neodesk as well, but I haven't convinced myself to convert to it yet (got the Neo/Geneva deal from Toad's)

Actually, if I recall from my fading memory (its been awhile ;-) the reason
for the limit was because the AES interface that accesses the RSC file used
an signed int for offsets into the RSC file. This limits you to 32K offsets into
a resource file. It wouldn't have lastest nearly so long if it weren't for the
exposure in the API that this had. Oh well.

HiSoft in the UK is the distributor of Lattice C v5 for the Atari
platform (and
Amiga I think). They can be reached on GEnie at the address of HISOFT. I
guess
to reach them from the net you should send mail to HISOFT@geis.genie.com
(I
think that is right)

Turns out, it was a loose chip in one of the sockets. He hadn't pushed down hard enough the first time he tried reseating them. It's all been worked out now.

BTW I didn't ship it with anything in the drive. Most computers that I have seen come with not insert so I figured it was safe enough.

Jon.

Just to add fire to the flame ;^)

GCC (and G++) sources are available as of the 12th I think, for 2.5.7. There's a 5.2mb tar and gz'ed file for this .... I don't think lh5 or Zip Deflate will help with this one ....

As for the people who have only 720k drives, why not uuencode it into 720kb chunks, and then re-assemble it on your HD!? Works for me ...

Karl.

3464. ST Games for Sale rev 2

Newsgroup: comp.sys.atari.st
Date: 1993-12-13 22:32:38 UTC
From: dmk@air16.larc.nasa.gov
Message-ID: <2eiqi6$s02@reznor.larc.nasa.gov>
Source record: 196835

Hi netters,
Revision 2 Message-
Even more games get added to the list.
Revision 1 Message -
Since posting yesterday, there have been additional revisions to this sale. First if you want to ship to Canada, I will charge 5 dollars more for shipping. Second, if you want COD, I will charge 5 dollars more for shipping. Finally, new games have been added to the top of the list and games that have been spoken for have been removed.
Original Post Message -
I have the following games for sale. Each one sells for 5 dollars and that includes shipping in the continental USA. There is NO warranty with these games. If you want me to try them on my Atari STe v1.62 TOS before sending them out, please let me know. Please be advised that if you do ask me to check them out, I may not be able to ship this month (Christmas is a VERY busy time for me).

Pirates (no box)
Star Trek, The Rebel Universe (no box)
221 B Baker Street (no box)
Toobin' (no box)
Silent Service (no box)
World Games (no box)
Operation Stealth
Summer Challenge (no box)
Test Drive (no box)
Western Games
Zany Golf (no box)
Arcade Force 4 collection (10 dollars)
MetroCross
Indiana Jones and The Temple of Doom
Gauntlet
Road Runner

Kick Off 2
King's Quest, Quest for the Crown
Battle Command
Orbiter
Barbarian
Corruption
Championship Wrestling
Final Assault

Project Neptune
Projectyle
Killing Cloud
Team Yankee
Sherman M4
Magic Fly
Exterminator
Damocles
Powerdrome (Box is beatup)
Leatherneck
Super Cars
Blasteroids
Blockbuster

Adventure games (also 5 dollars apiece)
Manhunter 2, San Francisco
Police Quest 2, The Vengence
King's Quest II, Romancing the Throne
King's Quest III, To Heir is Human
Stationfall

-- In the 10 dollar column (includes shipping) --
Challengers collection includes:
Stunt Car Racer
Fighter Bomber
Pro Tennis Tour
Kick Off
Super Ski
Light Force collection includes:
IK+
Bio Challenge
Voyager
R-Type

Thanks,
Daniel Koppen

3465. DIGITAL AUDIO LIBRARY on a.a.u.e (NAUDIO.LZH)

Newsgroup: comp.sys.atari.st
Date: 1993-12-13 23:29:27 UTC
From: wallmann@backus.pu.informatik.th-darmstadt.de
Message-ID: <2eitsnINNkkj@rs18.hrz.th-darmstadt.de>
Source record: 196837
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Finally I managed to get this out on the net. It was sitting idly on my harddisk waiting to be released, but I had to send this to a friend to upload this on an intermediate machine.

Anyway...

```
----------------------------------------
NAUDIO Evaluation Version available
----------------------------------------
```

NAUDIO is the first and only (?) library for the ST/STE/TT/FALCON, that gives PURE Programmers full portable digital audio capability. Now you can incorporate digital sound effects in your own program, without much concern about the underlying hardware.

NAUDIO features 4/8 track Tracker software, for playing NaTracker and ProTracker modules. But of course you can also "only" play samples. The performance ranks with the best on all output devices. Even on the ST NAUDIO runs in "the background".

There is MUCH more to NAUDIO than just this. So download your evaluation version from your nearest server, as there are:

World: atari.archive.umich.edu atari/Newitems
(atari/Sound/Players)
Europe: ftp.uni-kl.de pub/atari/incoming
(pub/atari/other_demos)
Frankfurt: Fred Box: 06181-52941 Atari Area

there are also two sample NAUDIO applications, that demo NAUDIO, in the NAUDIEMO.LZH archive near the other archive.

Nat!

In article 200908@helix.nih.gov, rvenable@helix.nih.gov (Richard M. Venable) writes:
>
>Piracy and Atari management are major problems; but I'm out at least a
>thousand dollars due to bad programming practices. I can't blame pirates
>or Atari for that; they had nothing to do with it.

Well, I disagree to an extent. When Atari makes undocumented (and unforewarned)
major changes in their operating systems, violating their _own_ "iron clad"
rules, then I do blame them for some software incompatibilities. And if piracy,
combined with Atari's mismanagement, contributes to the otherwise early demise
of a software developer's business, then I partly blame the pirates, too.
However, I agree that is NO excuse for haphazard, truly buggy programming!

>Please, just because I defend the notion of "try before buy", don't infer
>anything more.

I apologize for the obviously incorrect inference.

>... every computer owner is not a pirate, and not all developers are free
>from blame.

Agreed, 100%. I certainly did not mean to construe otherwise.

>I contend that crappy software has hurt the Atari market, as well as
>piracy and Atari itself.

Also agreed on all three counts.

>I want to try software before I buy it, because I have been burned. Since
>when does caution make me a pirate?

If a dealer or an individual loans you a legitimate copy of the software on
a "try before you buy" basis, then that is 'probably' legal. If the dealer
or individual makes you an illicit copy of the software to try out and you
accept it, then unfortunately, it *does* make you a pirate as you are in
possession of an illegal copy of the software. Legally, it doesn't matter
what you intend to do with the copy after the "test drive."

It's not so much an incrimination of you as a person, but rather of the
lousy software distribution system we all must currently put up with.

Let's face it... developer's (at least those of *good* software) would LOVE
to have a try-before-you-buy program that works without risk to them or the
buyer. The problem, of course, is that there are far too many others out
there who do not have the conscientious attitude that you have. It's the
old "One bad Apple spoils the barrel" kind of deal, I suppose.

BTW, a very nicely written, logical and intelligent reply, Richard.
==========

Thanks,

-Hutch- @ Fair Dinkum Tech

> Just curious what's the main changes between 2.3.3 and 2.5.5?

I can only speak for the C++ component, since I don't use C, and
the changes there have been phenomenal. 2.3.3 had some terrible
bugs, but 2.4.5 was MUCH better. 2.5.5 seems to have more bugs
though. 2.5.6 fixes most of those (maybe all - I worked around
them, so they don't show up anyway).

In a previous article, ma2jswc@midge.bath.ac.uk (J S W Chan) says:
+If could possibly be the fact that you are running on a 4 meg machine.
+I remember when I used to run kick off and kick off 2, they would crash within
+5 mins of running, always.

Yes, a friend of mine had the same problem with his 4Mb machine and solved it in the way you suggested. He said "Goal!" no longer crashed on the options screens, but it still crashed occasionally during the game.

I eventually managed to play for over half an hour without one crash - by turning off the auto zoom and having it fixed on maximum magnification. But it still zoomed out occasionally when the players ran out at the start - another bug. (And I don't find disabling game options acceptable!)

This all reminds me of another seriously bugged game - Imagine's "Super Soccer" on the old Spectrum. When the computer fouled your players, they would never get back up. So during particularly physical matches you would end up with all these "dead" players lying on the pitch.

Having just tried it and having got it patched to 1.02, it seems really
interesting. Good enough to use so far anyway. It's nice to have another
usable option apart from Uniterm or CoNnect, which are the only other
two Atari Terminal Programs, I have ever found usable.

Cheers,

Funny that the creator of GEM NETHACK should write this :) <haha>

Next to your GEM Nethack, there's Mines (or bombs), Pong and another Atari
GEM game that really doesn't look to impressive. Then there is NOVA-Mines
another variation of mines...and hmmmm....I don't know of much more.

Empire strikes me to be GEM Compliant too, to a limited degree, it has all
the menus yet it will only run in ST Med and ST High, that is because of
the age of the program though...I am sure that it could be altered to
be resolutions independent, as it was already quite advanced.

Hell..it even runs on som graphic boards at 640x400x2 :)

I wonder if computer manufacturers actually want to stop piracy. A simple solution, very simple in the case of Atari because TOS is in ROM, would be to plant a serial number in each computer.

Programs could be installed per machine and check the serial number - if it matches they work, if not they go into demo 'mode'. This will not stop piracy but will make it much more difficult. It wil also let people try before they buy.

If you upgrade your TOS, just reinstall the programs. A little inconvenient but better than dongles and copy protected disks.

3477. 5380 Parity checking

Newsgroup: comp.sys.atari.st
Date: 1993-12-14 08:25:00 UTC
From: leo@ahwau.ahold.nl
Message-ID: <CI0nDq.AyK@ahwau.ahold.nl>
Source record: 196708
Cross-posted to: comp.periphs.scsi,comp.sys.atari.st,comp.sys.atari.tech

Hello,

I am working on a SCSI-driver with the 5380 chip. I have some trouble with parity check in DMA-mode. When running in DMA-mode, I get an parity error immediately. When I handshake the ACK/REQ lines with busy waiting parity seems ok. Basically I carry out the following actions:
- Setup the DAM-chip (this is machine dependant - atari-TT030)
- Set DMA, Parity-check and Interrupt-on-Parity-error flags in the 5380 mode register.
- Read the ircv register (clear interrups/parity errors)
- Write the ircv register (GO)

Hereafter I get an interrupt almost immediately indicating a parity-error.
BTW: The drive has parity-enabled.

Is there anyone familiar with this problem? Am I missing something here?

Regards, Leo.

But they have other companies which represent them in Scandinavia. Adastra in Sweden and DigiCorp in Norway.

And the biggest Amiga magazine (Amiga Forum) had an tech. note about the Jaguar some months ago, and same did Musikk Praksis (the music magazine in Norway). ALL major norwegian computermagazine has got info about the Jaguar and the Falcon, but they only printed the falcon info. They are not so very interested until it is released (ATARI's future anouncement of products ...). But THAT is history. When Jaguars become avalible in Norway, all magazine will have the oportunity to have a look.

GEM in terms of what? A lot of games have used menu bars and windows but only
like running in lo-res. Quite a few more have menu bars a-la GEM but take the
rest of the screen. I used to have a bunch of old RPG/Strategy games that were
like this.

I found out a couple of days ago a nice (heck, more than nice)
Empire/Strategic Conquest clone, called World Conquest. The author
says it works with any resolution that has four or more bitplanes. I
personally can test it only at ST low, but it seems properly
programmed, I haven't had any trouble with it.

There are some nice things like artillery at land and battleships, and
invisible subs (you have to ping them with a sonar). The game looks
well worth the 10 SFr shareware fee (as soon as I get some spare
money... :-)

I found it by chance at ftp.tu-dresden.de (or was it
ftp.inf.tu-dresden), I could ul it to umich in a couple of days if
it's not there.

Sorry for re-treading old ground here...

I have a colour multisync monitor, (I think it's rebadged)
I think I might be able to use it with the ST in Mono or maybe
mono & colour modes. I hashed a cable together to try colour,
but no joy, just a wibbly vertical line appeared. I'm a bit
suspicious of the sync rates, but I'm no technician.

Connections were straight through, Atari RGB, Hsync & Vsync
and ground to same on the monitor. The monitor has 5 bnc's
and I have a VGA type cable for the monitor too which works
with a PC.

Anyone got any comments?

Monitor spec:
Resolution modes: 640x480, 400, 350
800x600, 1024x768, 1280x1024

Sync: Horizontal: 30-75 KHz
Vertical: 50-90 Hz, 25-45 (I) Hz

Anyone got any books on GEM programming for the ST lying around
gathering dust?

I'm developing some MIDI code, currently under TOS, and would like
to use a graphical front end. Seems a lot of the GEM stuff is
either expensive or out of print.

If you have GEM programming manuals you'd like to sell (condition
is not important provided most of the pages are there :) please
mail me at the address below noting the title & how much you want.

Thanks

I tried to get Karl to demonstrate T28 without NVDI; funnily enough he
wasn't too keen. Most of the speed up comes from NVDI, not from the
hardware. System Solutions' ads are a bit of a con, in that they compare
an STFM without NVDI to a T28 with.

I bought the Atari Compendium from HiSoft while I was there; I would
definitely recommend this book.

>... Saying that...I will definitely be
>going to the Next local Atari Show.
I didn't realise that Manchester was local to Westminster :-)

3490. bugs in frontier

Newsgroup: comp.sys.atari.st
Date: 1993-12-14 12:25:55 UTC
From: aesd2pak@dct.ac.uk
Message-ID: <1993Dec14.122555.9990@dct.ac.uk>
Source record: 196766

After waiting 11 months for frontier i eventually got the st version.
upon loading i was taken back by the graphics and the intro music was quite good for the sound chip.
After playing it for a while i came across several bugs which have either crashed the game or affected the graphics.

The first major bug is on the prefrence table in the game. There is an option to play the game with 512 colours or over 4000. Having an STE i chose the 4000 colour option and then suddenly the graphics went ape. The land started to flash and the whole colour systum had got screwed up.

A second bug is the autopilot has a nasty habit of flying you into the space station which is annoying as this kills you.

One other buf i found is in forward view at certain times if you press escape twice the game freezes and no matter what you do the game just dosent start again.

Can you tell me if there anyone who is exsperencing the same problems as i will collect all the information and send it back to gametek. Maybe we will be able to get a patch or a newer version.

3491. CD-ROM drives: A query

Newsgroup: comp.sys.atari.st
Date: 1993-12-14 12:30:10 UTC
From: djs@jet.uk
Message-ID: <1993Dec14.123010.12465@jet.uk>
Source record: 196771

CD-ROMs for the PC are dead cheap now; starting at about GBP115. However, these have AT-bus interface cards. What is the interface between the card and the drive? (Or are they different for different drives?).

Can anyone recommend a cheap double-speed multi-session (ie PhotoCD compatible) SCSI drive? Internal would be preferable to external, as I have a spare bay in my Tape Backup unit.

|>

I have SimCity, and it definitely uses the GEM interface. Just because it
restricts you to low res doesn't mean it isn't GEM. The low res restriction
is probably just an easy way to insure that a 16 color mode is in use.

It is indeed a task switcher - allowed you to swap between just 2 programs, though I think they had to be very well behaved to work.

> How do you use it?

Runs as an auto program and uses a hotkey combination - both shift keys I think - to toggle between the 2 programs.

> What ever happened to it?

Killed by piracy ? :-) I don't think it worked on the STE for one thing.

You need to turn 'WP mode' off to get ascii. You could also try converting it to RTF to save the formatting (use 1WP2RTF.ZOO from umich), as I think MS-W handles this.

From: c2sgy@dmu.ac.uk
Message-ID: <1993Dec14.140339.10110@dmu.ac.uk>
Source record: 196782

I received version 1.50 of the game a few days ago and have uploaded it
to ftp.uni-kl.de, its in /games. (I can't get onto atari.archive as its
continaully in use .... :-( )

This version is much better with raytraced graphics for the ships and
explosions - very good.

And yes I have registered my 6 UKpounds with the author. The support is very good as the
game is being continually developed all the time.
Also plans of a Falcon version are about - but write to the address on the
game demanding a Falcon version !!

I do not understand why people hate dongles so much. When I got my
Cubase 3.01 I plugged the dongle into my computer and there it has
stayed ever since. I no longer even think about it.

I think it is a better system than the one Ofir suggests as at least
I can lend or sell my software without any hassle. (I wouldn't dream
of doing so of course).

>someone in between you and the creator will, but the creator has already been
>compensated for his/her/their work by that time.

BZZZT!

Careful with this argument... Someone is guaranteed to claim that
since they've already been compensated, it doesn't really matter.

>When you rent a video, you are not the purchaser. Someone else made that
>buying decision, and if the movie bombs, they eat the loss. They can't go

And if the movie is a hot item, the purchaser is rewarded by repeat
rentals of the same movie, thus duplicating is depriving the
rental agent of return on her investment. So no matter where in
the whole food chain the piracy takes place, _somebody_ gets hurt.

>I'm all for developing means of better educating the software consumer. You
>say that demos are usually not good enough. And that's the reason there isn't
>more consumer demand for them. I'd venture to say that the reason there isn't

You know, the issue of demo versions become moot in the presence of an
adequate dealer network, where someone can come in and sit down
with the stuff for a while. Yeah, I know, someone's going to say
that's not the same, because some software may take weeks to learn
to use effectively. Okay, so you have a trained salesperson walk you
through the demo.

It's probably about time to say "the U.S. Atari dealer network is
all but non-existent." Another one of those chicken-and-egg paradoxes,
I guess.

I wouldn't like to tackle it on less than 1Mb. 2 floppy drives would be better
and a hard disk better yet.

|> cures this problem, but not everyone can afford NVDI ....
I don't know about the color stuff but Cixread which uses the VT codes quite
heavily, broke on the Falcon because the VT stuff is a bit broken. NVDI cures it.
I know NVDI isn't cheap but on the Falcon it's a must. As is Blowup or somesuch.
I had my Auto folder renamed tha other day and forgot I'd done that. When a
'standard' Falcon came up with normal res and no NVDI, it was horrifying! So slow
and so little screen space to move around in. It was rename and reboot quick time!

>mean, and how can I fix it?

CoNnect did not run in the non registered verison under Neodesk, which you are obviously using. This is no wanted limitation but due to a bug in Neodesk. Watch out for CoNnect 2.42 which will be placed on atari.archive.umich.edu as conne242 (e for English) in the next days.

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

How do I execute a program from GFA? I would like to
load a ttp program into memory, then call it when
needed. I need to know how to give it the required
parameters when executed. When I try this, it just
runs the ttp program, and displays it's help screen
as if it never received any baspage values.

I still haven't seen an argument convincing me that _Atari_ isn't the most
destructive force in the Atari community. IMHO, Atari's done more to
destroy the community, the market, the dealers, and the developers than
the rather minor (IMHO) threat of piracy.

>assuming the Medusa will use a 32 bit bus, which it should. You can
>officially buy TOS 3.06 roms, but programming your own roms from the T
>4.04 image sounds a bit dodgy to me.

As far as my knowledge, the 68030 have dynamic bus-sizing so there are
no reason whatsower that TOS 4.04 only woul run on a 16 bit bus!!

But, the MEDUSA is a TT clone, not a Falcon clone, hence they use the
TT-TOS (3.06).

The Falcon TOS have support for the sound matrix chip, the blitter and
the DSP, none of which is found on the MEDUSA, and 4.04 have no support
for the MFP serialports on the TT, which probably also are implemented
on the MEDUSA.

If you really want the features of the new AES of TOS 4.04, then run
MTOS on it!

In the States it's indeed Oregon. In the Netherlands it's ACN (possibly in
Germany, too, I'm negotiating) and the rest of the world is done by Douglas
Communications in Stockport, England. Don't know the address off the top of
my head.
I can still sell UVK myself, but officially only to people who react to
pre-Douglas advertisements or articles. In such a case it would cost DM 20
or Dutch guilder 20. Payable in cash at my home address Looplantsoen 50,
NL-3523 GV, Utrecht, Netherlands.

>start moving, and strike up a good national advertising campain.

I beg to differ, Kendall. They DID miss a national rollout for the Jag in time for Christmas. And when Christmas sales amount to >50% (so I've been told) of a game product's annual sales, it's a BIG miss, indeed. Atari has limited funds (and a tight clench on the money bag) for advertising so it's of utmost importance that what ad money they have is spent wisely... when and how.

But hey... I wish them luck in a VERY competitive market. If I'm wrong and Atari zooms to the top of the game console best seller list, I'll be thrilled!

I think it's mostly changes in the C++ end of things, as well as
squashing bugs and misc. improvements. 2.4.5 is the last Atari version
that will produce workable 68000 code though. :-(2.4.x add templates
to C++ (very handy!) and fix some nasty C++ bugs over 2.3.x

> And I just learned how to use "patch." I think I'll buy
> myself a pizza for that one :-)

Hey, all right! Now, if you'll just ship one of those Safari notebooks
up from Dayton to my office here in Waterloo.NCR.COM... ;-)

If I'm wrong (certainly NOT the first time), then I'm really glad to hear it, Andreas. I would have been a lot more comfortable if Atari had gone with a big national rollout in time for Christmas, of course, but hey, maybe this limited rollout on the two coasts will do the trick. Time will tell, eh?

Guess I'm just a bit gunshy from past recollections of Atari 'advertising.' :)

So... who in New York or the bay area wants to buy a Jaguar for me, eh???

HELP
Could anyone get an vt100 or ttyxx emulator for the Atary 1024 ST
PLEASE I UNRGENTLY NEED INFO!!!

3529. Atari Mega4 and more for sale

Newsgroup: comp.sys.atari.st
Date: 1993-12-14 18:31:43 UTC
From: chrome@tatertot.com
Message-ID: <12141993.103143@tatertot.com>
Source record: 196707

I want to sell the following as a package or if I have to prat it out. It's a
bunch of stuff so I hope that the buyer could arrange pickup in the San
Francisco area.
1-Mega ST4 4MB
1-Atari 1040ST 1MB bad MMU
1-CMI Processor Accelerator 16Mhz board for ST/Mega (never installed)
1-SM124 Mono Monitor
1-CM135 Color Stereo Monitor
1-bunch of Atari Software including:
Abacus Macro Assembler
Word Perfect
Spectrum
Fleet Street Publisher
Ultima 6
Flash
Elvira
Captive
Mega Travler
Uninvited
Impossible Mission II
all with docs and original disks.
the rest of the disks are full of PD and assorted other
programs you'd have to sort thru 'em probably 150 disks
1- Abacus GEM programmers reference
1- Abacus Atari ST internals
1- Abacus Atari ST Machine Language
and anything else that is sitting around here with a fuji on it.
I'd like to sell it all for $700 or B/O

3530. Atari ST Software for Sale

My friend has the following Atari ST software for sale. The following
prices include shipping and he's willing to consider any offers.

Print Master Plus & library 1&2 + fonb & bord $18.00
Flight Simulator II + extra books $18.00
Certficate Maker & library $18.00
VIP Prof. $13.00
Silent Service $13.00
Mean18 & Famous Course I & II $18.00
Balance of Power $13.00
Zork Trilogy $13.00
Pinball Wizard $13.00
Test Drive $13.00
Prof. Craps $13.00
SkyFox $13.00
A Mind Forever Voyaging $13.00
Borrowed Time $13.00
Mindshadow $13.00
Bartenders Guide $13.00
Wine Appreciation **SOLD**
1st Word $13.00
Thunder $13.00
DB Master $13.00
Black Cauldron $13.00
Math Talk $13.00
Cad-3D + Architect Design $18.00
Shareware Disk $13.00

Please email me if interested.

3531. Re: consumer retorts (was:Anyone cracked C

Newsgroup: comp.sys.atari.st
Date: 1993-12-14 18:49:13 UTC
From: hutch@bellman.lanl.gov
Message-ID: <1993Dec14.184913.21939@newshost.lanl.gov>
Source record: 196476

In reply to Eric Johansson's lucid comments about non-returnable software...

Actually, I agree largely with what you say, Eric. The consumer who buys an item of software and discovers that it does NOT do what it claims or is just so buggy as to be unusable IS getting ripped off. It's not right, for sure.

>I'm not saying ship it out for free. just package it so I can use
>the software and return it for a full refund if it is not what I need.

Good idea... but HOW do you propose this be done & still avoid piracy?

Users should have the right to test software before they buy it. Developers and dealers and distributors should have the right to their percentage cut of the profit from software sales. How do you support these rights while eliminating the pirate who would deny these rights to others? It's a tough question that is yet to be answered successfully, if it ever will.

>I spend maybe 50$/year on software for all my machines (dos and st).

Wow. You spend $50 per year buying software for TWO platforms? No wonder the software industry is in trouble! :)

>I will continue to promote consumer rights (to a refund :-) as well.

As well should we all... while decrying piracy at the same time.

Cheers,

-Hutch- @ Fair Dinkum Tech

>
>I have SimCity, and it definitely uses the GEM interface. Just because it
>restricts you to low res doesn't mean it isn't GEM. The low res restriction
>is probably just an easy way to insure that a 16 color mode is in use.

This is kind of an annoying way of doing it, however, in that there are more modes than ST Low that can do 16 colors. If you have an STe, then you can "Double" your ST slow to 320x400x16. Or MonSTEr it to 640x400x16 scrollable. It still should be usable...

It would be nice if programs checked 1) # of colors and 2) physical resolution (640x400, etc), instead of "ST Low, ST Med, and ST Hi." Hence why I cannot run Arcshell 3.1 in a MonSTEred ST Low 640x400x16, which obviously has the necessary resolution. (this is also why I like stuff like Gemview, CoNnect, and Nethack in that they let you take advantage of the actual environment, not the one associated with an arbitrary graphics "mode" ...

3534. HELP! Can't save game in DM!

Newsgroup: comp.sys.atari.st
Date: 1993-12-14 19:42:30 UTC
From: snoret@egon.unx.sas.com
Message-ID: <CI1Iqu.F0K@unx.sas.com>
Source record: 196472

Someone PLEASE help me! I finally bought Dungeon Master at the Toad Show on Dec 4. (I know I'm a few years behind the world on this note :)

Anyway. I finally got a chance to sit down for more than a few minutes and get going. I got down to the 2nd level, about 3/4 way through, if the sample map I have is correct, when I tried to save my game, position, heroes, etc.

I tried formatting... I tried saving...I tried formatting again (different disk)...I tried saving...NOTHING WORKED!!! I would format a disk, then as soon as I tried to save to it, DM replied 'This disk is unreadable'. If I tried saving to an already formatted disk, It would try, then say 'Unable to save game'.

I have a 1040STf, with AdSpeedST installed (set to 16MHz) and an SC1224 monitor. My hard drive and all other stuff is kept off during this. Is the AdSpeed messing up something? I'll turn the AdSpeed back to defaulting to 8MHz if necessary. Does DM _require_ a SINGLE SIDED disk? I've got DSDD disks.

Help!!! If I can't save, what good is the game? (Unless I have a few days to kill with no sleep, no work...no way!)

Thanks in advance for any and all replies.

>hmm. I thought I did but fact still remains that I can try CDs, videos
>and books before buying but I can't do that with software.

Oh? How so? How do you try CDs or videos without either
a friend who owns a copy, or a dealer who loans or rents it?
And why can't you do that with software?

>
>if I buy a non-returnable, non-defective CD, you are right. on the other
>hand, if I buy one of Tower Records "special offer" CD's, I can return
>it if I don't like the music. other CD shops in the boston area are
>now offering similar options.

The marketplace at work. If a large software retailer became
convinced that such a policy would sell more software, they'd
work something out, though licensing changes may be required.
If one company does it, and it works, others will follow.

...

>instead of ranting about developer getting ripped off, figure out a
>way that both developer rights and consumer rights can be protected.

Rights? If a retailer offers software for sale, under
the condition that it cannot be returned, and the purchaser
accepts that condition, then the purchaser doesn't have
many "rights", unless the software was severely misrepresented.

|> >
|>
|> Is that a brandnew SPARC or a second hand? Anyway, yes, SPARC is nice too!

Both SPARC systems have been new. I quoted the lowest prices available in
Germany (to my knowledge, but i don't believe there are any significantly
better offers around.

|> I mean...an INDY costs 5,000 U$D only...and THAT's REALLY nice :) if you're

In Germany, the INDY starts at approx 15000,- DM (incl. TaX). Usable standalone
systems are above 20000,-

|> I would agree, but that is not Atari's style now is it ;)

Atari did so with MiNT, the Multitos kernel. I Hope they come with an affordable
powerful system soon (better yesterday than tomorrow).

cheers,

Michael

3540. Can't get AtariST files readable on IBM

Newsgroup: comp.sys.atari.st
Date: 1993-12-14 21:34:20 UTC
From: dc25@cornell.edu
Message-ID: <dc25-141293213420@cu-dialup-0012.cit.cornell.edu>
Source record: 196721

Help!

I've been trying to transfer files off my ancient Atari 520st. Because my *pre* TOS 1.4 Atari doesn't read DOS, I need to find a way of formatting MS-DOS disks on an IBM so that I can save my atari files as text onto them and then read them back on an IBM.

I found an IBM program that does this, but when I re-opened my atari file on an IBM, I got either junk in the text (on a full-format file) or, a document made up solely of Greek sigmas (when opening a "saved-as-text" file).

Does anyone know where I could find a better IBM program that will make atari disks readable to MS-DOS? (Because I don't have comm software for the ST, I can't download an atari util.) Or can anyone suggest an IBM filter program that will get rid of the sporadic junk?

Thanks a bunch,
Dan

I have a couple things I culd use help with.. I don't read this area often
bexcause of time, but I would appriciate if you replied to either this accound
or quest@iac.net:

1) I am wanting to sell my 4 meg STe and sc1224 monitor if anyone is
interested, just lemme know what you think it's worth!
2) Is Atari's policy on buying a Falcon from the closest dealer still
being upheld? I have a 2 meg STe which I can't seem to get working I would
like to trade it in on a Falcon
2.5) Does anyone want a used STe, two megs?? It seems to have some sort of
chip error, I get like 26 bombs. It started like once a week then once a day
and now I have a hard time getting it to come up at all.
2.75) Any idea why that might be happening?? The people at Toad said it
sounded like a board malfunction.
3) Does anyone know the BBS number for J&J computers (Ratsoft HQ)?? I seem
to have lost it (twice) since they change the number..

Thanx for yer time! .\\ike aka Quest

Wolfgang, is this caused by the fact that the *current/live* directory is probably Neodesk's (like C:\NEODESK) rather than CoNnect's (like D:\TELECOMM\CONNECT)? One would think you could set the executable's directory as the *current* directory (as a flag or something)...

>CoNnect did not run in the non registered verison under Neodesk, which you
>are obviously using. This is no wanted limitation but due to a bug in

The autopilot running you into the side of stations seems to go if you click on a faster time passing selection.

Another bug I've found is the forward 4 (or 20) MW beam laser tends to make most of the screen go yellow when you fire it (makes it hard to target :-(

BTW it runs happily under a T28 accelerator, making the graphics, even at highest resolution, very smooth.

An atari dealer told me a long time ago that you indeed sholu throw away the plastic shipping disk. He said more damage was done by people putting it in and bringing their machines in for repairs than anything else to with the drives. And yes, it will destroy your read/write heads, WITHOUT MERCY!

In Short, Turf the plastic disk.

Regards,

Karl.

As mentioned in a later post, you are refering to Diamond Back.

I have a hard drive with 6 partitions and have had no problem saving
the SCSI partition information.

The problem could be due to the hard drive driver that you are using.
What driver are you using?

Message-ID: <CI1uFx.AIB@cix.compulink.co.uk>
Source record: 196716

Just in case anyone wasn't aware, Elite 2 runs quite happily on the Falcon, without the need for Backward or similar compatibility enhancers. Just copy it to your hard disk and run in ST low res mode (well, can't have everything, can we 8-) and away you go. It does hang if you have NVDI enabled though, so I generally rename my auto folder and reboot before loading it.

>The first major bug is on the prefrence table in the game. There is an optio
>to play the game with 512 colours or over 4000.

Works OK in either mode on the falcon, though it doesn't seem to do much
- in 4096 colour mode the screen just flickers a bit in large areas of
solid, light, colour. It possibly increases the number of colours the game
will display, but doesn't appear to effect the number on the screen at
once.

>A second bug is the autopilot has a nasty habit of flying you into the space
>station which is annoying as this kills you.
>
This is also in the Amiga version. FWIW, the ST version seems better. The
amiga version had a habit of crashing you into the ground as well, if you
were descending at 1000km/h or greater and switched on accelerated time.
Incidentally, I only get the space station crash with accelerated time on
as well.

>One other buf i found is in forward view at certain times if you press escap
>twice the game freezes and no matter what you do the game just dosent start
>again.
>
I don't get this one. Overall impression of the game is that it is very
nice and very stable. It also works flawlessly on the Falcon which is a
plus, and it let me load my amiga save game which was a massive plus
(didn't really want to start from scratch again 8-)

3554. Re: Falcon VT52

Newsgroup: comp.sys.atari.st
Date: 1993-12-14 23:55:13 UTC
From: kebab@cix.compulink.co.uk
Message-ID: <CI1uG1.AJH@cix.compulink.co.uk>
Source record: 196717

I've definitely noticed some bugs in the VT52 on the Falcon. I never bothered checking exactly what sequences, but at least one of them homes the cursor when it shouldn't. I suspect the restore cursor position op, but I may be wrong, and it certainly doesn't always happen (though if it happens for one sequence of VT52 ops it will always happen for them). NVDI fixed it, and I moved my VT52 based application over to GEM, so I never checked it any further.

>each machine rather than just stamping out x000 from a standard copy?

Possibly. I have no idea how much it would cost to generate a random
number on each copy and stick it a t a fixed address.

>How would the prog know it was the same machine/owner and not that it was being
>installed on another machine?

When you install the software, your machine's id would be written into the
installation program, preventing you from installing it on a different
machine. If you get another machine then, no simple solution. Hey, I
didn't say it was a perfect solution :-)

This is not true. The VDI is not accelerated by much by using hardware. I
have tested the board myself and compared it to an ST with NVDI. NVDI
really makes use of the extra speed while the built-in VDI doesn't.

```
STFM STFM+NVDI T28 T28+NVDI

Well, *I* prefer 1.4M floppy. The 1.2 meg ZOO file includes both GNU C
and GNU C++. Anyone using C++ is probably a serious programmer [or
should I say any serious programmer is probably using C++ ;)], and
have a 1.44M floppy. By removing GNU C++ from the ZOO (and packing it),
you'll get under 720K. Simply use:

zoo DP gcc256b.zoo gcc-cc1plus.ttp

voila!

Personally, I'd remove GNU C and keep C++, but your language mileage may vary :)

ST Zip is certainly nice. Personally, I usually have a `product' or
`distrib' target in my makefile which does all the work anyway.

(ie.

```
product: foo.prg foo.rsc foo.dat
rm -f foo.zoo
zoo ah foo.zoo foo.prg foo.rsc foo.dat
```

)

This probably has more to do with the fact that it's largely the stupid
copy-protection on Cubase (<3.0) that causes it to crash on the TT rather
than any inherent flaw in its design.

That's because Cubase is the only program that uses a dongle. Now if you had another program that uses a dongle... Forget about multi-tasking. You would have to power off the system, before you can load another program.

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

vctec@westminster.ac.uk (Denesh Bhabuta) writes:

>I am thinking of installing MiNT on my hard drive (using the Distrib kit by
>Simon Gornall), and have a choice of installing all the binaries and libraries
>etc on a Minix XFS partition.

An excellent idea - watch out though, from memory minit.ttp is missing from
the install disk. (My copy of the dist kit is quite old, I don't know
if they've been updating it regularly or whether Simon has dropped out..?)

>What I want to know, is how stable this would be, and what size partition I
>should keep for this?

Well, my system looks like this :

```
asharak:/>df
Filesystem 1024-blocks Used Available Capacity Mounted on
a: 353 265 88 75% u:/ (ahem...)
c: 15286 10128 5158 66% u:/ (TOSfs, boot stuff)
d: 31935 25162 6773 79% u:/ (TOSfs, misc rubbish)
e: 102288 72288 30000 71% u:/ (TOSfs, working archives)
f: 63632 30791 32841 48% u:/ (MFS, /usr, /usr/local)
g: 123327 804 122523 1% u:/ (MFS, /tmp, etc)
h: 82856 49072 33784 59% u:/ (TOSfs, storage arch.)
```

The first two partitions are the TT's internal drive, and they contain
a minimal set of stuff to run plain TOS so I can trasnport the system.
My default environment is MiNT/MFS, and it's very stable.

>Or should I just scrap the idea, and install everything on TOS partitions? The
>good thing with a Minix XFS is the long filenames just like Unix.

You're missing one other thing - the newer versions of MFS are _much_ faster
than a TOS filesystem.

>...Is it advisable to put all these under a Minix partition?

As a general rule, yes. Most unix-derived software will handle the long
filenames and soforth quite happily - mind you, I've run CalamusSL off
an MFS partition without any drama.

>What are the pros and cons of using a minix partition, apart from the fact
>that I will not be able to access it without MiNT?

Pro : Speed, long filenames, soft and hard links
Con : can't read it without MiNT, occasional software incompatability

>Danny.

generally people hate dongles because every dongle aware application
generally uses a different dongle. 5 apps = 5 dongles. in the PC world,
it is not uncommon to find a half a dozen dongles plugged into various
ports on a single machine.

another problem with dongles (and other well know forms of copy
protection) is that when the company goes under, and the "protection"
goes bust, all your hard entered data is instantly rendered inaccessible.
one could loose many thousands of dollars of data when a 15$ piece
of hardware goes poof!

Sometime sit down and try to figure out how much time it would take
to re-enter all the data you have entered in your system. multiply that
out by how much you would charge someone to reenter that data. I think
you will want to make a backup right away :-)

now consider how much of that data is stored in a proprietary format.
totally inaccessable except by a single application. scary isn't it....

> F030 have enunciated themselves in a real overhaul.

I think you've got it wrong... at Atari, there are two camps, but
they're the Tramiels and the non-Tramiels. The non-Tramiels are good
software designers, hardware designers, marketers, etc (though I don't
think there's a professional writer there... I'll do it!) who are
experienced, and know what they're doing. Unfortunately, the Tramiels,
who control the company and how it spends its money, are penny-wise,
pound-foolish, "do it our way or don't do it" people who think they know
more about the computer industry than they should. The non-Tramiels
eventually get fed up with this, and are lured off to better companies.

It looks like the Tramiels have learned a _little_ bit... the Jaguar is
actually going to go somewhere. Pity they've all but completely dropped
their once-lucrative computer business.

Thank you Ofir. I was hoping someone would take the hint and start thinking
constructively.

looking at your proposal and thinking with a pirate's mind :-) , I could
break this by:
copying disks before they were installed.
cloning s/n chips to all the same number.
making a s/n rom emulator for multiple numbers.

from a consumer's perspective:
what happens when my s/n chip fries? (and the sw vendor is chap-11)

As I see it, what is needed is:

reasonable prevention against unauthorised duplication.

reasonable (re)installation procedures (repeatable for same customer
ideal would be install on multiple machines but only one copy
is useable at a time.)

reasonable deinstallation procedure such that the vendor is
assured that the customer has no more (runable) copies.

an archive/library/escrow system that helps customers replace
lost copies of sw after the vendor goes bust.

anything else?

3570. Where's the Swordmaster?

Newsgroup: comp.sys.atari.st
Date: 1993-12-15 03:47:05 UTC
From: stevew@stoner.eps.mcgill.ca
Message-ID: <1993Dec15.034705.16178@sifon.cc.mcgill.ca>
Source record: 196722

In the Secret of Monkey Island I've looked everywhere for the swordmaster. I've even got an obscure walk-through that says to walk around and push over some sign - well, I can't even find the sign. Any not-so-subtle hints would be appreciated. Where is a likely site to find walk-throughs for this and other games?

Also, are there any PD/Shareware wordprocessors that utilize GDOS? If so, what and where are they. Thanks

3571. Re: TT and LaserBrain Epson Emulat

Newsgroup: comp.sys.atari.st

There have been some recent posts referring to a more recent
version of the Diablo emulator (it's version 1.4 at atari.archive)
and also a LaserBrain version which works with the TT. Could
someone perhaps upload these to atari.archive or suggest
a site where they might be available?

Thanks-

3572. That Pesky Monitor.... HELP!

Newsgroup: comp.sys.atari.st
Date: 1993-12-15 04:37:34 UTC
From: STIRRE31@MAINE.MAINE.EDU
Message-ID: <93348.233734STIRRE31@MAINE.MAINE.EDU>
Source record: 196723

Yep, my monitor is still VERY loud. It seems to get
progressively louder during use. Would someone know
what could be causing this? Is it a serious problem?
I don't have any local Atari dealers so I need advice!
Please post a response if you've got one. I'd appreciate
it very much. This monitor problem looks like it may
put a damper on my Falcon purchase :(

We use Force CPU-40 VME boards, and they run 68040s at 24 MHz. They
also have this enormous heat sink glued directly onto the '40 chip.
They had heat problems with the early '40s. The CPU-40s spew an awful
lot of heat, much more than CPU-30s.

When I think of a '40 running at 64 MHz, I get this picture in my
head of a red-hot horseshoe on a blacksmith's anvil :-)

>for the ST? I would like to get started in C, but I don't know
>what is available for the ST, and which is good.

Quite a comfortable setup is a system with 1 floppy and 1 Mb memory.
In this case you should also install a RAM disk. Go for a small C
compiler, like Pure C, MWC, Laser, or sozobon. Gcc needs to much memory
for a 1 Mb system. No experience with other C compilers, so can't comment
on others.

More memory and a harddisk will make your system more comfortable --
but I used a 1 Mb 1 floppy system for a couple of years for C programming,
and it was OK. (But note: BIG programs are difficult. BIG == about system
memory.)

OK. That comparison (stfm/nvdi against t28/nvdi) is important and useful.
It was missing from System Solution's ads, from their blurb at the show,
and from the demo they gave me. It was also, (I believe, from memory),
missing from your review in Atari ST Review magazine.

Mind you, your tests are based on GemBench, I presume. Is there a more
realistic version available than that given away on ST Review recently?
The reason I suggest that it is not realistic is that it seems to give a
similar weighting to some functions that are only rarely used (like
VDI enquire, justified text) as to more important functions (plain text,
scrolling, windows etc).

I think that a useful addition to GemBench would be the output of text
using GDOS/FSM-GDOS/FontFDOS/SpeedoGDOS where installed.

And going back to the subject of accelerators, I reckon that spending 300
quid on a T36 accelerator for an ST is throwing good money after bad;
that money is a good chunk of the way towards a Falcon.

From: steve@earth.ox.ac.uk
Message-ID: <1993Dec15.094522.21678@zaphod.earth.ox.ac.uk>
Source record: 196732

Well.. firstly.. I'm running Elite II on an 8MB TT from the Hard drive.

In article <1993Dec14.122555.9990@dct.ac.uk>, <aesd2pak@dct.ac.uk> wrote:
>After waiting 11 months for frontier i eventually got the st version.
>upon loading i was taken back by the graphics and the intro music was quite
>good for the sound chip.

I was too.. it's as good as the PC with SVGA graphics, if not better, the sounds isn't QUITE as good as a Soundblaster Pro card.

> After playing it for a while i came across several bugs which have either
>crashed the game or affected the graphics.
>
>The first major bug is on the prefrence table in the game. There is an option
>to play the game with 512 colours or over 4000. Having an STE i chose the 4000
>colour option and then suddenly the graphics went ape. The land started to
>flash and the whole colour systum had got screwed up.

Well.. the "flashing" you see could be the interlace it's using to give extra colours.. I dunno why as the STE/MegaSTE and TT all have a palette of 4096 colours.

I have not other problems with it.. the colours, other than being flickery, are fine.

>A second bug is the autopilot has a nasty habit of flying you into the space
>station which is annoying as this kills you.

I think this is an incentive to learn how to fly the ship :-).. seriously it must be an algorithm problem as all the other versions do this too.

>One other buf i found is in forward view at certain times if you press escape
>twice the game freezes and no matter what you do the game just dosent start
>again.

I've never had this problem.. then again I only got it yesterday.. then again again I have played it for some hours now! :-)

>Can you tell me if there anyone who is exsperencing the same problems as i will
>collect all the information and send it back to gametek. Maybe we will be able
>to get a patch or a newer version.

I've got another bug for you... load the BATTLE commander from the commanders disk... when you die, which will be VERY soon try to load a new commander, the machine will bomb with something like 10 bombs, the music will keep playing.

>Elite?

Hmm... all these Elite old-timers coming out of the woodwork eh? :-)
(I'm one of them! Elite on the BBC-B early disk version (no asteroids), ZX Spectrum and Atari ST, of all the ports the ST's was the worst.)

Yes, it is WELL worth buying!

Yes, it will run on the TT.. from the Hard disk too!

It's in the same mold as the original Elite though the ship control is different. It is more difficult, a whole lot BIGGER and just as fun. All the skill and trading is there.

The control of the ship is somewhat different than the original, even with the "Elite compatible control in space" option turned on as the ship now has momentum and acts more like in "real life."

>machine. If you get another machine then, no simple solution. Hey, I
>didn't say it was a perfect solution :-)

This sounds like the way Opcode's MIDI-software (for the Mac) is copy
protected. Ask some regular users what they think of *that*.
Disk-crash? Sorry, no sequencing. Borrowed computer? Sorry, no sequencing.
Defective installation disks? Sorry, no sequencing, not even on your own
machine. Any other problems? Sorry, no sequencing. Asking for new copies of
your installation disks? Sorry, you have to wait a few weeks.

Imagine you have to make a living with your MIDI-gear, and your hd crashes the
night before a concert...

I _do_ understand the reasons software developers copyprotect their product,
but copy-protection *can* be hurting the consumer in rather dramatic ways.
The advantage of any hardware protection over suggestions like the above is
that at the very least you can still use your software even if your hd crashed,
your computer went up in smoke so you had to borrow your friend's, or
whatever...

IMO the most 'friendly' copy-protection still is the kind in which your
software has a serial number or uses a personal keyfile or something like that.
Couldn't such a system be made cracker-proof?

>I'm curious what people think about the above. Thanx for any tips.
>
>--- Mike
--- End of notice ---

Yes it can be constructed quite easily and as suggested by others,
it is best to switch it if you wish to split into two sockets. Have
made one ages ago but there does not seem to be too many games
requiring the joystick in the mouse port these days- apart from two
player games thus I don't have it connected at the moment.
Don't seem to find time for games anyway

Regarding the lost rubber thingy- I have resoldered a number of port
sockets and the first time I thought I had lost one too. However not
so as while there are two sockets under the return key only one
rubber thingy is used. There is also one other spot on the board
which is left vacant.
Hope this helps
Peter

)>and books before buying but I can't do that with software.
)
)Oh? How so? How do you try CDs or videos without either
)a friend who owns a copy, or a dealer who loans or rents it?
)And why can't you do that with software?

If I'm going to buy a CD, I have to know that it has at least two songs on it that I like before I buy it. If I'm going to buy a video, I better have seen it before and like it a lot.

You hear songs on the radio or from friends, you see movies in theaters or by rental.

Most people do this with software - they just can't do it legally

)
)>
)>if I buy a non-returnable, non-defective CD, you are right. on the other
)>hand, if I buy one of Tower Records "special offer" CD's, I can return
)>it if I don't like the music. other CD shops in the boston area are
)>now offering similar options.
)
)The marketplace at work. If a large software retailer became
)convinced that such a policy would sell more software, they'd
)work something out, though licensing changes may be required.
)If one company does it, and it works, others will follow.
)

The reason they haven't in general is because everyone would copy the thing, and they know it. Another problem is that a copy of software is perfect, whereas sound and video copies degrade.

I have a few friends who bought nice $3000 486/66 machines (but neither one has a sound card or has any games - go figure!). They have not paid for a single piece of software, but have all of the big programs (which I assume don't get much use without the manuals). There's another guy at works who copied some very expensive circuit board layout software, then copied the whole 300+ page manual on the copier - and the boss said "whatever". At least they buy the software the company actually uses.

Anyway, after that long and winding paragraph, what I'm trying to say
is that people who "try" software end up "trying" it forever. Another
interesting point is that I'm not really sure you could really
consider a lot of thier stuff as pirated, since they don't actually
use a lot of it at all - they just have it.

)...
)
)>instead of ranting about developer getting ripped off, figure out a
)>way that both developer rights and consumer rights can be protected.
)
)Rights? If a retailer offers software for sale, under
)the condition that it cannot be returned, and the purchaser
)accepts that condition, then the purchaser doesn't have
)many "rights", unless the software was severely misrepresented.
)

Yep, that's why so many users choose to bypass the whole thing and try
it out anyway.

I just uploaded TOS binaries of hpcdtoppm 0.50 pl1 (a filter which converts
from Photo CD to PPM format) to ftp.uni-muenster.de (pub/atari/Graphics/hpcd051b.zoo)
and to a.a.u.e (pub/atari/New).

No, DM works fine with DSDD disks on my DS drive!

Hello everybody,

It's just to tell you that DIGITAL can play the modules of Fasttracker (PC)
So, it plays now 4,6,8 voices mods.
You can find modules of this type on the server ftp.uni-kl.de or in
any pc server.

If someone can send me S3M format, it would be very cool !!!!

Emmanuel.

From: Don_Maple@kr.maus.de
Message-ID: <A37803@KR.maus.de>
Source record: 196419

Speaking of atari archive... does it have a mailer? (I don't have ftp here.)
So what's the full mailer address for the following two:
comp.binaries.atari.st
comp.sources.atari.st

Is it archive@...
or ftp-mail@...
or gimme-stuff@... ;-)
or i-wanna@... ;-)

Any other archives you lot can suggest would also be appreciated?
I know about Paderborn and McGill (the latter seems to have problems...)

While I'm at it: How do I do batch PINE and NN/TIN message retrieval? What I mean is, I don't want to read messages "live" but put them in a file and then DL them to be read later. (The suggestion: "keep pressing 's' after each message is (fx: Buzzzzzzzzz!) the *wrong* answer! ;-))

And finally, does anyone know the "raw" message format description (I think
it's called "RFC" standard of some such...) so I can just do stuff directly
without mucking about with ELM/PINE/TIN/NN et al...

Thanx muchly!

Don

PS !!!===> If answering by mail please send it to: donm@ucon.gun.de <===!!!

Big TIme. You need a new mask for every ROM. A better solution would be
a set of jumpers set to a certain code and then glued into plastic or
something.

>When you install the software, your machine's id would be written into the
>installation program, preventing you from installing it on a different
>machine. If you get another machine then, no simple solution. Hey, I
>didn't say it was a perfect solution :-)

Hmmm, and what about the pirate who "fixes" the check whether the
program is run on the original machine?
In my opinion there is at the moment just one single solution and that
is the CD-ROM, which is difficult to copy because of its size.
Unfortunately that leaves the Atari's out, because very very few atari
owners own CD-ROMs.

>is still being suported? Alternatively, an email address for the authors,
>or maybe a similar program to do the same job.

I assume it is the same program but I am not sure. Anyway, a few weeks
ago I bought GEM Spooler 3.1 (which is called gspool.acc by the way) and
I love it. It really makes printing to my HP Deskjet 510 so much easier.
The new 3.1 version will work on any Atari including Falcon and in any
graphics mode and even under MultiTOS. Everything is in windows now and
usage has become much easier (becvuase the dialogs have been
redesigned).
Anyway the program is still actively supported.
The author is Steven van Rossen
and he can be reached on the Bitz BBS
tel. +31 2 3611408

I bought my copy via the ACN by the way (it is a Dutch version, but
French versions also exist).

I've just recently been playing DM on my machine (Got my start to finish
completion time down to under four hours... *grin*) and it works fine
with DS drives, and with my ICD Hard Drive switched on and running; just
bypassed with CTRL-ALT-SHIFT, so I guess that's harmless enough. My guess
is it's the AdSpeed board, since I've never had any problems (and I've
got at least two versions of DM, too...)

Great game, BTW... Has anyone worked out what the Ekhard Cross or the Gem
of Ages do?

From: jensk@hpbbn.bbn.hp.com
Message-ID: <JENSK.93Dec15083009@hpbbrn.bbn.hp.com>
Source record: 196520

It seems that ICD have shut up their German support-office-plus-mailbox.
I got a letter from the company that now supports ICD products in Germany,
with an offer to buy the "SCSIpro Utilities" at below half the official price.
I'd like to know if anybody has had experience with these utilities - are they
any better than the original ICD utilities? Do they fix any serious bugs?
Do they still work with MiNT/MinixFS?

Thanks in advance,

Jens.

>Unfortunately that leaves the Atari's out, because very very few atari
>owners own CD-ROMs.

CD-ROM is not a solution in itself, as they don't *have* to fill it up to max. Usually the spare space is used for additional files of interest for the app owner, like the CorelDraw CD's which have numerous clip art and fonts. You can easily copy the necessary files to run the apps to floppy, but you miss out on the goodies.

As you say not too many Atari owners have a CD-ROM yet. Give Atari the blame for this - although they were very early out with the CDAR504 drive, it never really came out and they skipped the drive which was supposed to appear at the same time as the TT. They blamed it on the fact that the drive mech could be had for less through street vendors, but as a result people didn't buy a drive at all, and because of this no titles has been made. IMHO, there's no excuse for not buying a CD-ROM reader now - you can get a very cheap SCSI unit (albeit "old" speed) right now. The TT and Falcon have SCSI - older models can use an adapter. I don't care if there's a lot of unmodified 520ST users out there - you can't live in the past forever.

When the userbase gets larger on the Atari side we'll see more discs, but this will not happen unless someone gives the snowball a push. Has anyone seen the Dev CD Atari was supposed to present at a fair this fall? (Mr. Kilwinger - any comment?) When it comes to projects like this they can't blame it on "techical problems with the packaging" - just laserprint a sleeve and put it in an envelope. The power is on the disc, not on the sleeve. There are drivers out there - I know of a non-Atari XFS in beta and an audioplayer (which works...) as well.

We can use any ISO-9660 disc containing files we can use on the platform - SoftKey has for instance a very cheap disc with over 300 fonts in TrueType and Type1 format (around $70 I think). They ship the package on two discs, one for the Mac and one (ISO9660) for the PC, so PageStream users should be able to hook up a CD-ROM reader and use it right out of the box. E-texts, pictures, audiofiles - all readily available on CD-ROM and usable on the Atari line of computers. We just don't have all the fancy multimedia titles and games the Mac, PC and Amiga users have at the moment.

Rick Venable (rvenable@helix.nih.gov) wrote:
: While were dreaming, why not a 68040/PowerPC combination with the Jaguar
: chipset for graphics and sound?
Because there is no need for a 68040/PowerPC combination!
Remember, the chip design comes from Motorola. One aspect in its
development has been to produce a chip that is partly compatible
with the 680x0 and has the power of the IBM POWER chip.
Aside of IBM and Motorola there is a third partner: Apple.
Apple has implemented a new computer based on the PowerPC that runs
the 680x0 Mac programs by emulating some 680x0 code and using the
System 7 rewritten in native assembler, yet. Remember that the
PowerPC has the ability to load microcode, so you can configure
your micro-processor!

One reason for Atari not to do this development is that this
computer can't be done `without the price'. But with the Jaguar
hardware you would get a computer comparable to the Iris Indigo
workstation for a third of the price.
I think, since IBM wants to get into the multimedia-market,
Atari should cooperate with them and offer their Jaguar and
Falcon custom-chips and ideas to produce a presentation-machine
beyond your dreams. I'm sure this would be a `killer machine',
like someone mentioned before, but you don't really need a
64-bit graphics processor with CD-sound if you're working with
spreadsheets and wordprocessors. :)
So Atari won't stop the Intel based PCs.

Nevertheless, I prefer Atari :) :)

get a copy of DC-format it will make an IBM compatable floppy.
Make sure you do not use any folders on the floppy under TOS 1.0,
IBM's get very unhappy when you do.

Then again clones do not like extended disk formats, or twisted formats

Absolutely correct, Gordie. If more developers/publishers made available demo
versions it should at least reduce one more common excuse for piracy. Atari
software has been slow in this regards for some reason. Although I made demo
versions of my various word puzzle programs, of course. :)

Nah, the Medusa T40 is a legitimate (albeit expensive) response to provide the Atarian with a more powerful, more modern machine since Atari has been reluctant to do so. If you have the bucks, it sounds great to me.

> program that will get rid of the sporadic junk?

To produce PC readable disks on an ST (TOS < 1.4), I use ps2form.tos from
atari.archive.umich.edu. Works every time. The major difference between
old ST and PC 720k disk formats is in the boot sector. You should not
use any extended formats on the ST disks (ie twisted, 82/10, etc.). If you
have disks already formatted, you can supposedly use DCFORMAT to write an
MSDOS compatible boot sector on the disk (without reformating or erasing it).
I dimly remember having problems with this, though.

To produce ST readable disks on a PC, you should not have to do anything
special, other than being sure you use DSDD disks. Also, the MSDOS format
is somewhat braindead, so if the PC floppy is a high density, you should
give specific options to format so as to create a DSDD 720k disk
("format a: /t:80 /n:9" will work, given drive A of course).

You might have a problem with your ST or PC drive, in that one of them is
out of alignment. This is unlikely, though.

3610. ICD Utilities....where?

Newsgroup: comp.sys.atari.st
Date: 1993-12-15 16:55:33 UTC
From: vctec@westminster.ac.uk
Message-ID: <CI35oL.AGu@westminster.ac.uk>
Source record: 196662
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Dear Atarians,

I have got the ICD Link for use with my Hard Drive, and also got the utilities, but are version 6.0.8

Now I recall seeing version 6.2.4 at an Atari show, and have seen someone post a message about 6.2.3

No, I only got the Link about a month ago, and have this old version. So how do I go about getting the newer versions?

Are ICD on internet? If so, would someone kindly forward me there address.

Or is there any site on the net from wher I can ftp the latest utilities?

Thanks.

Danny.

Just my tuppeny 'orth

HMV in Manchester are taking orders. They are expecting to get them any time now.

Also, Titan Designs will be selling them, any time now. It is advertised in their catalogue.

Danny.

3612. Question: Patch Editor/Save/Dump for Yamaha TQ-5?

Newsgroup: comp.sys.atari.st
Date: 1993-12-15 17:07:08 UTC
From: br@wan.inf.rl.ac.uk
Message-ID: <14447@hardy.rl.ac.uk>
Source record: 196614

I have a rather ancient Yamaha TQ-5 synth/sequencer (as well as an EMT-10, and a Cheetah master keyboard). I bought a 1040 STE because I became so fed up with the TQ-5's awful sequencing. However, someday soon I reckon the internal battery on the TQ-5 will give out, and I'll lose all my custom patches.

I've picked up some PD patch editors, and they give some degree of twiddleability, but were obviously designed for different Yamaha models. And none the MIDI drivers I've tried (eg MIDItalk) can both save and restore TQ-5 patches (Miditalk seems to read them, but the TQ-5 won't reload them; Concerto (magazine freebie) goes into a fit.)

Can anyone suggest something better? (Apart from buying a better module than the TQ-5 - not an option at the moment, alas!)

(All a bit academic at the moment, as my Atari's just gone back to the shop for repair under warranty (sounds suspiciously similar to the "Help! My STe keeps crashing!" problem, but I didn't see that thread before sending the beast away... looks like I can expect a long but fruitless period of machinelessness...)

I'd appreciate e-mail: it's not that I don't read this group often, but our news feed seems rather dodgy at the moment.

Thanks,
Brian

If you want to format a disk with AdSpeed, set it to 8MHz, otherwise the
timing in the format code is shot to hell. I have exactly this problem with
my ST with the TOS format call, and virtually all PD type formatters.

Cheers, Steve.

Yes, but this will definitely minimise the scale of piracy.

>missing from your review in Atari ST Review magazine.

I have not seen the issue yet, but these figures were submitted to the
mag. They may have cut some out due to space restrictions.

>Mind you, your tests are based on GemBench, I presume. Is there a more
>realistic version available than that given away on ST Review recently?
>The reason I suggest that it is not realistic is that it seems to give a
>similar weighting to some functions that are only rarely used (like
>VDI enquire, justified text) as to more important functions (plain text,
>scrolling, windows etc).

The results were based on GEMBench, but I did run many more tests -
scrolling text in First Word, Zipping files, dithering 24 bit images to
monochrome in GEMView and others.

As far as weighting the results in GEMBench - I thought long and hard
about this and decided to leave it a simple average. Yes, VDI enquires are
less used than VDI text, but it's very subjective to decide what is more
important. If you use you computer for graphic apps, then the VDI graphics
test maybe more important to *you* than all the text based tests. I
decided to leave it to users to interperate the results themselves, rather
than deciding what was more important on their behalf.

>I think that a useful addition to GemBench would be the output of text
>using GDOS/FSM-GDOS/FontFDOS/SpeedoGDOS where installed.

GEMBench used to have a GDOS font test, but I removed it because there was
no way to compare machines as people were using different fonts and a
whole variety of problems came about. The problem with Speedo tests is
that the test time depends on the size of the cache and whether the font
is already in the cache from a previous app using it, before running
GEMBench.

>And going back to the subject of accelerators, I reckon that spending 300
>quid on a T36 accelerator for an ST is throwing good money after bad;
>that money is a good chunk of the way towards a Falcon.

But 200 pounds on the T28 might not be such a bad investment.

I can't think of anything else. Yes, you can break any system, but this
one may be just difficult enough to minimise piracy to a managable scale.
It's like any crime, you can't totally stop it, but you can install the
best alarm system you can afford.

I have been told that Lucas Films Battle of Britain runs in any 16
color resolution. It is supposed to look real nice in TT Medium. Can
anyone else confirm this? I heard it from an Atari dealer who said he
could no longer obtain it.

>Q. Do Atari still make and market the STacy and/or STbook? If so,
> does anyone in the Seattle area (_if_ there is any ST life here!)
>know of
> an outlet?

STacys were built in 1988, all sold out by now :-)

>Q. What are the specs.?

ST-Book: 1 MB RAM, 40 MB harddisk, no floppy drive, data transfer cable
and software included.

>Q. Which is best?

ST-Book: 1960 g with rechargeable battery (lasts up to 10 hours)
Stacy : about 7 kg, no battery at all.

Guess which I like more :-)

>I need at least 20meg disk space and a DMA port. Does the STbook have
>this?

They have 40 MB hard drives and a DMA port. ATTN: Special DMA cable
needed, the connector is extra-small. This cable is available through
Atari and does NOT cost a fortune.

bye, Peter

|> and then read them back on an IBM.

Use FORMAT on the MS-DOS side and be sure to format a 720 KB disk!
USE FORMAT A: /F:720 on "modern" MS-DOS or FORMAT A: /T:80 /N:9
on "really old" MS-DOS
This should give you a double sided single density floppy
(MS-DOS can't read or write single sides floppies)

This should be readable and writeable on every TOS even 1.0!

|>
|> I found an IBM program that does this, but when I re-opened my atari file

This proofs that you are able to format and read them, you can't interpret
them (Well DOS can't)

It would be nice to know which programm you are using. You can't expect
MS-DOS to do anything useful to SIGNUM or Calamus files.

|>
|> Does anyone know where I could find a better IBM program that will make

The only problem is that MS-DOS has no "s (german sharp s) and uses
a beta. This could be changed by a little TR SED VI Emacs ... script.
(And i don't think you care about that :-))

SW>ST-ZIP is okay, but due to huge header data, the resulting files are
SW>usually bigger than their lharc counterparts. Also, Lharc (2.3x) is a
SW>LOT (and I mean a LOT) faster!

The main-problem with ST-Zip is that it's still very buggy. ST-Zip cuts pathnames longer than 44 chars and produces very often damaged archives or bombs ;-)

SW>I saw something in the 'whatsnew' file mentioning Minix, so maybe 2.32
SW>supports XFS filenames!? (My german isn't quite good enough to make
SW>out what it all said!)

Yes, LHarc 2.32 supports some of the XFS-advantages like long filenames, case-
sensitive filenames... In older versions there was a stupid bug ;-))

BTW:
It's time to enhance your german ;-)

SW>ST-ZIP's interface however, is nice and simple! Even the local 'don't
SW>have a clue's ' Can work it okay!

Lharc 3.00 will have a GEM-interface similar to ST-Zip but - believe me - much more better and faster! I hope to be able to release LHarc 3.00 at the
end of this year... Long filenames are very nice if you don't have to use some of this awful CLIs ;-)

Criss...

|>

Assuming you are staring at the new colour/3D desktop...

You can do what I do. Set Neodesk to Auto run during boot.
You need to add the path to NEODESK in you GEM.CNF file. You
will also need to add the ability to run .EXE files in your
GEM.CNF file.

From my GEM.CNF file:

```
setenv PATH=.,C:\MULTITOS,C:\NEODESK3
setenv GEMEXT=PRG,APP,GTP,EXE
```

Now reboot your system and smile. Look under you desk accessories.
You now have TWO desktops!!! NEWDESK and NEODESK!!!

No longer will you have to envy everyone with Dashboard on their PC!!!

It takes getting used to but it sure is nice to have multiple desktops.

Of course I also play a recording during booting with the following in
my MINT.CNF file:

```
exec d:\wave\waveplay.prg d:\waves\STTNG\welcome.wav
```

3627. GENEVA QUESTIONS

Newsgroup: comp.sys.atari.st
Date: 1993-12-15 20:36:09 UTC
From: dhbutler@magnus.acs.ohio-state.EDU
Message-ID: <199312152034.PAA23772@magnusug.magnus.acs.ohio-state.edu>
Source record: 196675

Hi All,

Here's a message I sent off to Gribnif software concerning some problems
I've having with GENEVA. Please note that overall I am quite impressed with the
package and am not posting this here to complain about it, but in hopes that
some of you might use GENEVA and have some suggestions;

Dear Gribnif Software

Yesterday I purchased GENEVA from TOAD computers while in the Washington
Area. So far I am extremely impressed; the interface
is excellent, especially the tear-off menus. I do have a number of problems and
questions, as well as a couple suggestions. I have not been able to locate
answers to these problems in the manual. Hopefully you will be able to
shed some light on them. You will need to know the system I am using:

HARDWARE:
Mega 4
TOS 1.04
T25 accelerator board (68000 chip is 25mhz)
ISAC High-resolution Mono/Color board (1024*768*16colors max)

SOFTWARE (please note I've already turned off everything I don't absolutely
need after installing GENEVA; the following are auto programs I use virtually
every time I turn the system on)

Auto (not listed in actual order):

Jarxxx
GENEVA
Warp 9 Version 3.50 (comes with T25) (run after Geneva)
G+Plus (run after Geneva)
ISAC driver
EPD (extended palate driver)
HP deskjet/laserjet screen dump program
NeoLoad
Suberboot (& suberboot"a")
Data Diet 1.0a

Accessories:

Warp 9
G+plus
SpiritEd
XControl (latest version as far as I know, it has no cosmetic problems
w/GENEVA)
4096

Data Diet

Programs I run (and have problems with):

NeoDesk 3.04 - a) I had to upgrade from 3.01 to 3.02 to 3.03 to 3.04, and during the step from 3.02 to 3.03 it asked me for my "Extras" Disk. Since the 3.01 I originally purchased did not come with an Extras disk (at least not one I could find), I have not been able to upgrade my Neodesk control panel or printer que. I also was not able to get the .Inf file updating program and had to redo my preferences from scratch. Please let me know what to do (Should I start searching for a lost disk or is this an oversight in the updater program?)

b) It would be really nice to be able to turn off the backdrop picture option! The reason for this is that there is a ShareWare backdrop program/acc combination that
works in all resolutions on all monitors except Falcon TrueColor. Unfortunately, even if I have this running, Neodesk places its own background color over it! (OK, so that's minor, still, a nice backdrop at 1024*768*16 colors would be just *so cool*!-)

c) Due to a conflict with my video card and Neodesk (as well as other programs), I've been hunting and hoping for a way to set up a Macro with a DA (4096). I was just wondering if NeoDesk 4.0 might have this feature. If you have any suggestions along this line I would love to hear them!

Calamus 1.09n - Any windows Neodesk has open stay open and cover up necessary parts of Calamus. This forces me to "sleep" Neodesk every time I enter Calamus, which is not too bad, but is annoying and time consuming.

Outline Art - Same problem as Calamus. Not that both of these programs will also leave their windows all over the desktop unless put to sleep. So my question is; is there anyway to automatically set some programs to sleep or hide or minimize their windows or anything along those lines when I run another program? (I'm looking under the sleep heading in the manual, and there seems to be no reference to this sort of option).

GEMINI - I had switched from Neodesk to Gemini (sorry guys) because of a conflict with my video card and Neodesk. (Gemini naturally produced *other* problems, *ssiigghh*). With GENEVA running, Gemini says it "cant make Trash Directory", demands a disk in drive A, then loads but won't run any programs (it says: can't find Runner.app). BTW, If you ever fix this color-palate bug with the ISAC card I'll be very grateful (this is one I've mentioned before; The ISAC card has a 4096 color palate, but Neodesk and a few other programs don't recognize this properly. As a result, whenever one of these programs is run it sets my Red, Green, and Blue to 14,14,14 instead of 15,15,15, thus making my white a nice light shade of grey instead of white. The makers of the ISAC card are literally clueless as to how to fix this.)

Well, that's all the problem I had for now, but I have some other questions concerning the functioning of GENEVA;

1) Whenever I run a program set for single-task mode a dialog box pops up and makes me hit OK. Is there anyway to turn this off, it is annoying.

2) Is there a way to save all default menu (tear-off) locations, open DA's etc? For example, when I boot up, I wish it would automatically place the "Task" window in the upper left corner of the screen, and the Desk Accessory Menu in the lower right and so on. I can't seem to find a way to do this.

3) The nice 3D buttons and such are available in just about everything except Neodesk 3.04. Is this normal or am I doing something wrong? (oops, I guess that was another problem).

Thanks in advance for any help you might be able to give me!

It was SUPPOSED to be at the Garland Incredible Universe store the week before Thanksgiving. Haven't seen it yet. I'm the secretary of the North Texas Atari User's Group and we've got an inside line into when it will be there. So far, nada. In fact, several of our members have pre-paid for one at the Arlington store with no luck.

Maybe you'll be luckier than we are...

None of them, or in another sence, all of them. It's supposed to be "TOS compatible", which probably means that most well behaved applications will run (only legal system calls etc).

3635. Falcon memory upgrade

Newsgroup: comp.sys.atari.st
Date: 1993-12-15 21:56:42 UTC
From: bill@main.morris.org
Message-ID: <1993Dec15.165643.114@main.morris.org>
Source record: 196601

Several weeks ago, I asked about 3rd-party memory boards for the Falcon, and posted that the final choice was one sold by Toad computers in the USA, for $65 (was on special, now I think its about $65).

I got in, and installed it. Kinda a nightmare. Atari was right in that there is very little room in the Falcon. The new memory board fits in where the 4mb memory board sits, ie you pull out the old 4mb memory board. Problem is that with the SIMMs, it stands a little too tall, and you need to cut out some of the shielding. Well, the shielding is a real flimsy metal, and after I cut it out, it was bent to all hell, so I said fine, and threw it away. Installing the cover, the SIMMs are just a wee bit taller than that, so the cover bows up a small bit, right between the F7 thru F10 keys. Doesnt bother me any, but what a pain. Took me about an hour to install, tho, its just the lack of room that made things hard.

Boots up, and apparently due to the Falcon memory model, it doesnt recognize anything about about 14.2mb. Hey, helluva difference between 14mb and 4mb! But why does it stop at 14mb? What is using the top two? TOS or what?

It also takes a little longer to boot up. Not counting the memory count, when it finally says BOOTLOADED and starts to load my AUTO stuff, it seems a bit jerky. Anyone know why? For instance, prior to adding the memory, the last thing in my folder was the ScreenBlaster driver, which pulls up a menu of rez selections. Now, there is about a 5-10 second pause before I see that. Again, not a problem, but I am curious as to why. Is it loading things in memory top-down, so its slower, or what?

Anyways, running MultiTOS, the Xcontrol panel, MTOS Alert, GDOS, SAM, AFM, Before Dawn, DeskTrakker, and CoNnect 2.2, I have over 11mb free! Totally cool!

Hmm... Well, just in case, are there any PD drivers that will improve on AHDI
or should I stick with it? I run TCache so a cache is not really needed (unless
it's better then TCache).

What?!? You don't want a 13Mhz 68000 box with flashy graphics and sound co-processors?!?

> Let's face it. DOS boxes rule the world and Macs are close behind.

I guess you've never used a DOS box on a network, eh?

An Atari PowerPC-based machine would be wonderful. It'd fly real well if it were PowerOpen-compliant (Atari follow standards? HA!), then we could use the DOS/Windoze emulator that will be running on all PPC machines. Whether any PPC-based computer will be running Mac apps is up to Apple... I still haven't seen anything to suggest that non-Apple PowerPC-based computers will be able to run Mac apps.

An Atari TOS/GEM personality would be great on top of a UNIX of some sort; I'd still kinda like to see NeXTstep running on it for an affordable price...

> each chip do what it's best at. Runs most ST, PC, and Mac software (3in1).

Putting an '040 in would be pointless... '040 emulation on the PPC is
already at the level of a 25Mhz LC040. Putting a real '040 in would
drive up the price quite a bit (not just by the cost of another CPU...
SMP designs are expensive enough; imagine all the extra stuff required
to get two _different_ CPUs going together!).

IF Apple lives up to its hinting, *any* PowerOpen-complient machine will
be able to run DOS/Windoze/Mac apps.

Strangely enough, dealers can't make _any_ money off PCs unless they
sell a LOT of them, don't support them, and add extra goodies are unreal
prices (like software, or an extra 4M of RAM, or a larger hard drive,
etc).

3641. GCC lib: bug in fputc?

Newsgroup: comp.sys.atari.st
Date: 1993-12-15 23:16:48 UTC
From: gijs@mbase97.hacktic.nl
Message-ID: <H.eg.CTA3fjBV&IY@mbase97.hacktic.nl>
Source record: 196609

Hi,
I'm doing the simplest of I/O operations: I try to write
a number of bytes to a file, and read it back.
Writing uses fputc, reading fgetc.

When comparing the read values to the original, bytes are
mysteriously missing or added at some points. The first byte
is missed, for instance, around byte 25.

Rewriting things to use fread and fwrite produced similar errors.

Is there some known bug in the gnu library with file I/O?

ld says it uses -lgnu. I ftp'd it from the archive about 4 months ago.

I'm not using mint when running the program.
GCC version is 2.4.4.

This is frustrating! The application at hand does a lot of complex
midi-I/O, which I all got to work in the last couple of weeks.
And now I'm not able to do simple disk I/O!

PLEASE reply or followup if you have any clue!

________ATARI VIDEO GAME SYSTEMS_____________________________

Sometime in the almost forgotten mist of history, a wizard by the
name of Nolan Bushnell invented the video game and created the
American company with the peculiar name. Later the tradition was
carried on with the 2600 VCS, but eventually it was doomed to fail
against the two giant eastern warriors, Nintendo and Sega.
That was until one day in the year 1993. The day that would there-
after be known as "The day of the Jaguar".

Year____Model___________RAM_____________Engine & Speed___________

DSP Jerry 26.6MHz RISC

_______ ATARI 8-BIT COMPUTERS _____________________________________

Microcomputers dropped like a bomb in the late seventies. Every
company with some self respect wanted to be first on the ball.
Few managed to do so well as Atari did with their powerfull
8-bit series that prospered for over one and a half decade.
While computers like the TI99/4A quickly disappeared, Atari
managed to improve their models and sustain the backlash after
the early years of unlimited expansion. But Atari was bleeding
badly. The one billion dollar company almost went under in the
struggle, something that would later open the door for the next
person to enter our story...

Does anyone know if SPECTRUM or UNISPEC are capable of running on a MEGA STE?
Any "tricks" we need to be aware of?

Thanks,
Scott dunham_scott@htc.honeywell.com
or dunham@homer.htc.honeywell.com

3644. GOAL! from the author

Newsgroup: comp.sys.atari.st
Date: 1993-12-16 00:23:39 UTC
From: amiga@hosta.dircon.co.uk
Message-ID: <amiga.756001419@hosta>
Source record: 196691

Hello,

I have only just joined this newgroup, but I had heard that there were
some problems with GOAL! on ST on a MEGA 4 ST.

This is suprising, as the game works on my Mega 2 fine. If the person
who was having problems can email me, I might be able to help.

The Warning about it 'being full of bugs' and crashing all the time can
only apply to this particular setup. The game has been extensively tested
on 1040STFM and MEGA 2 ST's, and the released version has no crashes at
all as far as I am aware. (Certainly they have not been reported to me by
Virgin). So you should be able to buy in confidence (at least of you
don't have a MEGA 4).

Should it turn out that there is a problem with compatability with MEGA 4's,
contact Virgin (address/tel. on back of manual), who should come to some
arrangement.

If you wish to contact me anytime, email to:

amiga@hosta.dircon.co.uk

Regards,

Dino Dini

Please, please, please,
Help me

I'm wondering how to finish the Adept's Challenge in Omega.

I've figured out that I need to enter each 'elemental station' and not
leave
but I can't get past Death - I've killed him over and over with
hellfire, but
he eventually just disappears.

What next, or what have I flubbed?

Thanks,
Sam Groves

I am not trying to undercut your arguement. Just wanted to say that the music/video stores around here (some not all) will let you return both CDs and Videos simply because you do not like them. They often will only give a store credit, but they still take the stuff back. (btw, most videos today are copy-protected, and you loose picture quality/color when you copy them)

> a LOT (and I mean a LOT) faster!

The smallest unit of disk storage is the cluster; clusters are at least 2 sectors (unless you're using a DOS 1.44M floppy), and sectors are at least 512 bytes. Unless the header info drives the file size over a 1k threshold, it doesn't make a difference. Even at a mere 2400 baud, 1k is just ~4.5 seconds (assuming about 232cps, which is what I usually get).

It really doesn't make much of a difference what you use; they're all about the same speed (+/- 5% or less, probably), they all compress about the same amount (+/- 5% or less, probably)... Some of them work MUCH better than others on non-DOS filesystems (ex, zoo!) though; I tend to use what works best (hmm, most of the stuff I bring home from my OS/2 machine at work is usually repackaged by me into tar'd and gzip'd format; it uncompresses faster and doesn't mess up filenames).

NetHack, but I hear you're close to the author... ;-)

There's a game called "Wonderland" (as in "Alice in"; it's a suped up text adventure) that works in all ST resolutions (!), but it doesn't use GEM... it sort of creates its own system that's a bit like a Mac and a bit like X.

I've got a GEM version of Mah Jonng, but I think it's monochrome-only.

There seems to be a trend in "GEM" games; they're still resolution-specific. :-(

It would be MUCH better to check for 16 or more colours. SimCity would
be much nicer on a larger screen.

It'd be ideal if it ran on any graphic mode, like most Mac games (which,
if they don't, check for "graphics mode that I need, or better").

You could probably patch SimCity so it doesn't check the screen
resolution; then it'd be up to you to ensure you've got at least a
16-colour screen. It's just silly to go to all that work to get it
working in GEM, and then put in a stupid check for one specific screen
mode (which is a pretty basic mode, too).

Luckily, with all that RAM you can dump in the Medusa, running MiNT and
MultiTOS (face it, if it's not MiNT/MultiTOS compatible, it probably
won't run on the Medusa at all) with it's new and improved AES is no
problem.

Unless, of course, you want to make the same mistake most PC owners
do... get a fast processor, and starve it for RAM (4M is NOT enough for
Windoze, let alone real operating systems like Linux with X and OS/2).

Someone told me about PowerNET in email; I'm glad to hear there is
some software that works with the LAN port.

Pity none of it works with AppleTalk, making it useless if you want to
attach to a Mac network. :-\ Which was my point, really.

>their once-lucrative computer business.

You know. I have just about had it with the pompous arrogance of certain members of the Atari community. For all of the brilliance many people out there claim to have, why havn't they started up their own computer company with blazing success?

No the Tramiels havn't put Atari over and above the rest like we all would want...No the Tramiels didn't smother us with love and affection with customer support....But for crying out loud, they have kept Atari alive for 10 or so years after their announced death, and in _very_ good standing!

Just what would happen to the company if they set aside an advertising budget of $40 million to push the STE, or the Mega STE, or the TT, or the Falcon030 like everyone wanted??? We would have seen 40 million pass through the electronic media with _any_ return. MS-DOS and APPLE have the computer market. That is a fact. There is no way of penetrating the computer market with all of the money Atari has. We would have finally seen the death of Atari.

So What about pushing the Atari Lynx with such an advertising budget. I would conclude we would again see the money pass without any return. Just look at the

Lynx. It is a nice unit, but there is NO solid base for the unit. There is no major entertainment system to back it up Sega and
Nintendo has. When we look in our gaming magazines, whey do we look at? The Sega and Nintendo Entertainment systems. Once we buy these systems, we then will purchase the hand held systems. Also, look again at the gaming magazines. They are wall to wall games and systems...and Atari only has ONE dippy little hand held computer system that would maybe have two pages of press. Now you can bitch and moan about the lack of games and developers, but why should they (and Atari) put such a huge budget into a hand held computer gaming system when the TOS line brings them more revenue (or less losses)....

Now look at the Jaguar. It is an entertainment system that real people would actually consider buying....and one that could actually give some kind of return for an advertising budget we all are craving. This system, unlike a hand held system, has the potential to make a dent in the computer
gaming market. The Jaguar, unlike the Falcon030, CAN cut its way into the market....

Now we all know the Tramiels didn't do the best job they could have, but come on folks, before claiming you know better and (thanks God there hasn't been any death threats lately) saying they are incompetent, THINK first. Just becuase Atari is advertising doesn't mean they now have waken up, it means they finally created a system that can penetrate a grand market. Mass advertising for the ST,STE, MEGA, TT, PORTFOLIO, FALCON030, LYNX would have been pure stupidity. $40 million only will go a small way. I applaud Atari for NOT spending all of there money on worthless business ventures like the TOS line, LYNX, and Portfolio....

My thoughts....

I picked up a copy of STraight Fax a few months ago from my dealer, who didn't know STraight Fax wouldn't work with the Robotics Sportster modem he also sold me. Toad informed me they'd send me their upgrade free in a month (2.0) or so, which would work with my modem.

I never heard from them, so I phoned and they told me they'd send me the upgrade for $20, and it would work with my modem. I agreed, and found the program didn't work with my modem. They had me log onto their bbs (a long distance call for me) and downloaded 2.10 upgrade, which didn't work either. Installing it also screwed up the desktop.info file, which resulted in the computer crashing whenever it read the file until I installed a new one.

After getting no responses on the bbs, I tried phoning. Someone there told me I should buy a good modem, and they support the Supra. He than rapidly ended the conversation, telling me I needed to talk to the programmer, and he'd call me back. He never did. That was a week ago.

There's a modem testing program you can download on their bbs which, if you have a Sportster, will tell you is "STraight FAX (TM) Compatible! Call TOADAY (sic) to order yours!" If you have a Robotics, it isn't. And don't expect any STraight ANSWERS.

> Are then any accessories that I could use for this (even if I have
>to pay)?

No, you don't need any accessories (other than the cable, the Sun
and the TT ;-). With UniTerm, remember to use modem port 0 (or is
it labelled 1? The one with the lowest number anyway). UniTerm is
an old beater from the times when there were only STs, which had
but one modem port. It's still an excellent terminal prg, but it
cannot be made to work with the additional modem port of the TT,
and it cannot use the two "serial" ports too.
Other than that, everything should work. I use a TT to log into
an Indigo with UniTerm, using modem port 0, so I know it works in
principle.

Good luck!

Source record: 196698

STalker 3 is a telecommincations program that works as a Program or Desk Accessory. All terminal I/O is in a window. It has a scripting language called BackTalk that is very C-like. I am using STalker 3 & STeno to write this reply and access the Internet. STalker is distributed by Gribnif Software. If you get STalker, you should also get STeno (available seperately) as STeno is an text editor that integrates with STalker to be used as a type ahead buffer as well as a capture buffer.

Also, I am going to be the new developer for both packages.

Danny:

First off, the Link has different software than is available publicly.
You need to upgrade by sending ICD $10.00 for the Link versions.

They are currently working on version 6.3.x. The last version available
on GEnie is 6.2.4. I don't know the difference between Link versions and
general ICDHost versions that they release to GEnie.

You can email them on GEnie at: ICDINC@genis.genie.com
They also have a BBS with they post their software to if you don't have
access to GEnie. I don't know if the software can be sent from GEnie.

Hope this is helpful!

>cache has a copy. If it does, then the valid bit in the cache is reset.

A question then comes to mind: does this bus snooping also provide the
ability to supply the bus with a valid cache datum if it resides in the '040s
cache buffer? Obviously this should be severely curtailed for memory-mapped
I/O, however it would do wonders for systems without cache, let alone fast
memory (and boy what if it was a ROM address!).

If not, then _why_ not?

The logic would dictate that it would be best to be assumed that no
locations are cache-able, but certainly it would help performance be able to
tell the MMU (or whatever governs cache) that locations XXXXXXXX through
YYYYYYYYY are cacheable areas of memory. If I recall correctly, the reason
that the newer chips have on-board cacheing (besides being convenient for
inst/data queueing) is that the on-board cache memory is not only faster than
main (DRAM) memory, but is also faster than standard cache memory. This would
imply that the cache on-board the CPU could provide a cached datum faster than
external cache could (limited by bus transfer speeds of course).

So, would this be doable, or just wishful thinking?

Do you use the mfs XFSs? Does it run stable for you? I try each new
version as they come out on a.a., but they are always unstable - I get
intermittant "Exiting MiNT" errors on my MTOS (and thats with it running as
MINTNP.PRG - it bombs faster with it on MINT.PRG). Thats a real bummer
because I would _love_ to use the V2 filesystem - the 32MB limit is a pain.

BTW, I recall a that there was a way to increase the buffer size for
read/writes to Minix partitions - does anybody remember this, or were they
perhaps talking about something else (perhaps directory cacheing? something
else?)?

I have never dealt with Toad so can't comment. I do however use STFAX and
like the program very much, altthough there were problems with my modem
(TKR) to start with. Unfortunately Class 1 and 2 and 2.0 have never been
defined properly and so the programmer of STFAX has to deal with each new
implementation of the fax/modem protocol. I know that he is aware of the
problem with the Sportster and is working on a fix right now. I suggest
you mail him directly at 73047.2565@compuserve.com

Ask your system-manager to enable login's from the serial port. This is
standard disabled and can only be enabled by root. Uniterm will work
fine (I used it myself for connecting an old 520 to a sun ELC).

TOS is erasing the whole memory before loading the programs. To speed up
the Bootup you can install the program Pinhead. I think this program is
on nearly every ftp-site with Atari-Software.

>

Hi Simon,

Depending on what you need to do with MIDI, GEM and TOS
may not work for you without major modifications.

I have developed a graphical front end, and new MIDI handlers
for the ATARI ST platform.

If you wish to check out my front end, I have uploaded an
icon editor to UMich, called icon.arc. The icon editor
doesn't have any MIDI functionality, but it is a good
demo of my front end.

I have can post a barebones MIDI recorder / THRU, with a
real-time keyboard display (61 keys, hardcoded to channel 1)
if you or anyone else is interested.

Things have been so busy at work, I have not been able to spend
time on the ST like I used to, recently...

And, I haven't creaked open my Sybex GEM programmimg book for
a couple years. It is in great condition, and since I never
plan to use it again, make me a small offer and it's yours!

I believe there is a public domain manual on GEM programming
(tutorial format) out there on the net somewhere also, but
I don't have the details. I think I may even have it online
here at work somewhere, and I'll look for it if you are
interested.

Mike,

I know some music stores will give store credit for un-liked product, but that's between the store and the buyer. It's part of the contract they make when the sale is made. It's important to note that. There is no 'consumer rights' issue involved. The buyer freely enters into a contract with the seller for the product sale. If part of that contract allows for some kind of refund/credit, that's cool. But to claim the buyer has some 'right' to be satisfied is incorrect. The buyer has the right to make the contract. What the contract contains is a matter of negotiation between the buyer and the seller. Some contracts will, in fact, guarantee satisfaction. But, again, that's not a 'right', but a facet of the contract.

The only 'right' the buyer has is that the product is true to its representation. If the buyer enters into the sales contract without being adequately informed about the product, or just doesn't care, it is the buyer's problem. If the seller misrepresents the product, it is the seller's problem. (Yeah, there are other things that might enter into this whole situation. The seller might use high pressure techniques to make the sale, and most states have some means of addressing that problem. The seller might be misinformed about the product, and inadvertently give incorrect information to a potential buyer. And so on... But, we were talking about the sale of intellectual property products, which is usually pretty straight forward.)

There is no 'right' to be treated fairly, or to be protected from poor business practices. Those are things that the consumer must do for him- or herself. If you don't like the way a business deals with you, patronize another one. In business, you vote with your dollars. Don't spend them with someone who doesn't do business the way you want. But, don't expect someone to step in and make things more to your liking...

Good point, perhaps that would not be an appropriate test for GemBench.
However, there may be room for a benchtest for Speedo, to give some
indication of the impact of cache size changes etc. Maybe I'll see if
I can come up with something here...

3680. Floppy Disk Noise ??????? Help....

Newsgroup: comp.sys.atari.st
Date: 1993-12-16 11:44:07 UTC
From: vctec@westminster.ac.uk
Message-ID: <CI4Ls7.5Jq@westminster.ac.uk>
Source record: 196624
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi again,

Another problem....I remember posting a similar message a few weeks ago, but did not receive any replies......so here goes again.... B-)

Since upgrading to TOS 2.06, my internal and external floppies have been making weird noises when accessed. Like a crunching, loud sound !!!

Now, I've asked a few experts in the fiels, namely System Solutions in the UK, and they told me that 2.06 was built for Hard Drives and High Dens floppies, so basically when the floppy drive is accessed, it looks for a high dens drive, and when it does not find one, it changes the step rate to accomodate the low dens floppy, and it keeps on doing this when the drive is accessed.

They said that they do not know of any patch program available that will keep the step rate to what it should be, but I recall reading on the net that there is one somewhere.

Anyone know where I can get it?

Any help would be appreciated.

BTW, I want to change to a high dens module soon, but the price I can not afford at the mo. I've heard that this months ST Doormat.....sorry ST Format will have a feature on building your own. It's supposed to be out today, so I'll go and buy it. Maybe I can build one of my own, without spending too much money.

Thanx in advance for people who reply.... ;-)

Danny.

hello, i need some information about ftp.

i need a program (tcsh-script) for ftp (i call it listdir).
now listdir should log me automatically in an ftp site, make a listing of
all files in the directories and subdirectoris, put them in one local file
and finally logoff.

first i wrote the following shell-script:
#! bin/tcsh
ftp <ftp-site>

then in the .netrc i put:
machine <ftp-site>
login anonymous
password petep@info.isbiel.ch
now my problem:
how can i force the ftp.program to create the listings?

any idea?

please mail to petep@info.isbiel.ch. i will post the solution later.

thanks in advance.

I have a few joysticks for sale...cheap...oh well, just repeated the subject message B-)

Anyway, I have :

The Bug,

Cheetah 125+

Quickshot II Turbo

Quickshot I (Yes, These too....but very cheap)

Cheetah Bollistick...for people who like the console type joypad

and also, a Snes joypad called Quickshot Intruder.

These are brand new and have never been used...I think they are shrink wrapped, so why not mail me and get one by Christmas.

Danny.

Yes, SimCity seems to be partly done in GEM, but as you say, it's not resolution independent. Chess Champion and Psion Chess are two other examples of this (they will even run in mono) but apart from that, I've never seen a truely resolution independent game using GEM.

However, one nice thing with the games mentioned above is that they will improve if you have Warp 9 or NVDI loaded. Neat.

No, no no..... as far as I know, the ST does not need parity. You should be able to use PC SIMMS too, which have a parity bit on them, but the ST ignores this when installed.

Whatever happened to betatesting?

First we had the utterly bugged Civilisation and now... Elite II !!!

Is this some sort of plot against Atari?

I'm very dissapointed and wont buy Frontier until its been fixed. I fear this
kind of things will really hurt software sales and boost piracy even further...

3687. SLMC804 and SLM605 Atari Laser printers

Newsgroup: comp.sys.atari.st
Date: 1993-12-16 13:53:23 UTC
From: djs@jet.uk
Message-ID: <1993Dec16.135323.23250@jet.uk>
Source record: 196628

I have a good SLMC804 controller, but a bad SLM804 printer. I may have
access to an SLM605 printer without controller. Does anyone know if the
605 print engine will work with the 804 controller?

Alternatively, anyone want to make me an offer for:
SLMC804 controller, as new. Includes drivers and manuals.
SLM804 print engine: Basically works, but
a) A toner spillage means it needs a good cleanout.
b) There is a very small mark on the drum, which means that output
has a very small 'blind spot'. Whether or not you could live with
this depends on personal taste.

Source record: 196632

How much do you think it would cost to 'encourage' Microprose to enahnce
some of their games for the Falcon ??

Games like F1 Grand Prix with the DSP powering thre 3D and sound would be
very fast and will sound like the real thing. Most or all Falcons are 4 meg
and above (or should be ...)

Also games with 256 colours etc. (from the PC or Amiga AGA machines) would
look great on a Falcon especially if they were linked in with the DSP.

So what if they are not original - you have to start somewhere don't you ???

So how do Falcon owners go about getting a game produced???

Would Microprose or any other company accept a large cash incentive from a
mysterious person and then code games or is just a 'We won't code for this
machine attitude' ... (I know they base their games on sales of hardware but without
software you don't get hardware!

I was quite surprised to see in the Dec (I think) ST Format (spit!) that there were quite a few Falcon Games about. I knew about Ishar1/2, Transartica and that SpaceJunk, Humans and the Minter thing were on the way. There was also mention of some 3d Formula 1 game, raiden, and several others. The Jag section noted that a new planned Jag game was based on an existing falcon game with some wierd name I can't remember like eixxozxn.

I am not sure, but it seems to me that the gnu lib is kinda old,
and support of it has been abandoned in favor of the mint lib.
Anyway, I think you should get yourself the mintlibs and try to
compile your program with it (use the -mint flag, even if you
don't have MiNT installed). Programs compiled with the mintlibs
run fine under SingleTOS as long as you don't call any MiNT
specific functions, of course.

It uses the same physical cabling. I only said you most likely cannot
interchange MAC-Atari. You can print LocalTalked, Laser writers share
the same rpinter, same drives, same modems etc. etc. THAT is possible.

However there is no software driver to work with the MAC..but you could
call up Dragonware and ask them about it.

>instead of ranting about developers getting ripped off, figure out a
>way that both developer rights and consumer rights can be protected.

If anyone can figure out a foolproof way to do this, it should be worth a LOT of money to a LOT of people/organizations. To date, however, the industry has not come up with the right scheme that satisfies everyone's needs. It is NOT an easy solution to come up with.

One primary difference between books/CD's/videos and software that has not yet been mentioned is the *ease* of which these can be stolen (duplicated). Because software can be copied so easily, quickly and cheaply, it presents a much more difficult problem than these other items of intellectual property.

I really don't understand the arguments some people make against limited DEMO versions of software products, however. For the most part, it really does sound (IMHO) that the people who complain the loudest about demos are those that would rather steal the s/w anyway. Demos that are well designed should certainly give the user enough of a "feel" for the product to know if they should purchase it or not. Granted, a few demos out there may be lame to some extent, but the vast majority are really more than sufficient. Loud, unjustified arguments to the contrary go direct to alt.pirate.bitching.trash. I agree that Atari software demos do seem to be few in number, but then again, so is Atari software in general. ;-)

Personally, I think the wave of the future is the demo CD. I have 3 of these for the Macintosh with well over 1Gb of not only very capable demos, but also the REAL products on the CDs. You try the demo and if you like it, you call the 800 number with a credit card and they give you an unlock code to copy the selected software off the CD to your hard disk or floppies. Electronic manuals are on the CD and/or they ship you the paper manuals. A good system.

BTW, this has been a good discussion on the net from you both (Eric & Gordie). Let's keep it professional *and* cordial, shall we? :)

3697. DM Game Saving Problems Corrected

Newsgroup: comp.sys.atari.st
Date: 1993-12-16 19:24:27 UTC
From: snoret@egon.unx.sas.com
Message-ID: <CI578r.DxC@unx.sas.com>
Source record: 196637

Thanks for all of the helpful responses to my previous post. I have since
been able to correct the problem. I just formatted a DSDD disk using
DCFORMAT from Double Click with the following parameters (at least the ones
I can remember changing:)

sides - 1
tracks - 8
sectors - 9

I have now successfully saved and resumed my (barely begun) game of DM at
least 4 times. (The first set of multiple mummies kicked my *ss! Luckily
I still had one character left to carry the bones to the 'Altar of Rebirth'
That thing's rather handy! ;)

Thanks again! Oh, by the way, anyone got any tips on using spells?

Rick

All 2,5" IDE drives have a 44 pin connector. 3,5" IDE drives have a 40 pin connector with a much wider pinout. The reason for the extra four pins on the 2,5" drives is, power supply is done through the IDE cable instead of using a separate power connector.

Full DM maps and a spell chart are available from atari.archive (at least, I think I put them there; Email me if you can't find them). As for spells, you need to build up all of your character's attributes as quickly as possible. One way to do this is to "exercise" them. Cast spells, throw stuff, swing your weapons, etc. whenever you get a chance (i.e. when there is water and food nearby). You can complete DM with just one character, if he/she gets tough quick.

One neat thing about the spells is that there are many that you can just figure out. In other words, put together the pieces that would make sense for a fireball, and you get a fireball. This algorithm can be applied for other spells as well.

I have the following system for sale:

1040 ST w/ 1 meg RAM and TOS 1.02
60 meg Miniscribe HD in shoebox case with ICD AdSCSI adaptor and
Adaptec Controller loaded with SW and PD software
Star NX-10 printer (old and beat-up but still delivers for around the
house kinda printing)

Dr. T's Tiger Cub MIDI software...will do notation to the 9-pin
printer and looks good!
SDI space adventure game from Cinemaware
tons of disks with more PD & SW and a few commercial downloads from
the Software Club on GEnie.

Asking $350 + shipping for the system.

>Jeffrey A. Krzysztow

Will the next version of Stalker use Speedo? And can you make its ANSI
implementation rival Freeze Dried's?

As much as I want to stick to the Geneva/STalker combo, I keep going back
to Freeze Dried (even though I have to re-boot without Geneva). Please
make STalker as quick and IBM-BBS-friendly as FizzDizz...I promise I'll
never go back!

And while you're at it, how about a truly GEM-based Geneva-friendly QWK/Blue
Wave
compatible offline reader/mailer? I've tried 5 or 6, and even registered
Captain Qwik, but none of them is up to snuff.

I spend a lot of time online for pleasure and for business-related
networking (I'm a musician/publicist). A seamless system to manage my
online activity would be worth a lot to me.

BTW, I saw Geneva demo'ed at the BCS/Atari meeting in October, and
thoroughly enjoyed Dan and Rick. I've since bought Card File 4, Geneva,
and Neo Desk (will upgrade ASAP). Love that Gribnif software!

Good luck and success!

Actually, the Mindset was not a clone, or even a compatible, although it was an MS-DOS machine, and used an Intel 8086 as the CPU <shudder>. That was one of the reasons for its failiure on the market. Given the fate of all the other early "non-compatible" MS-DOS machines (which often had better graphics than the PC), it might have actually sold better had it used a more civilized <grin> CPU.

Yes it will work perfect!

For thoses who want to enjoy it too,

I Have a SLM605 with SLMC 804 to sell; the drum had too a little mark.
I bought it as a set with my MegaST4 last month...
Printer had 3766 copies at counter and,exept this mark on the drum,it work
perfectly.-Very small mark :-))

I sell it 'cause I already have a HP Deskjet since a year.

Sorry to hear about the problems, but alas until I get some more cash I have
to rely on my old STE to develop Minixfs (donations of hardware would of
course help :-) You can up the cache sizes by editing 'config.h' (the place
should be obvious) and recompiling. If I ever release the binary config program
you wont need to recompile.
Steve.
PS This is a bit odd, it's the first time I've heard of such problems, are you
using MiNT 1.09, 1.04 had a few problems as I recall.

TOS 2.06 trys to read disks at a (I think) 2ms seek rate, whereas
normal 720K drives are only supposed to read at 3ms seek rate.

There is a patch for this on atari.archive.umich.edu

directory (Should be)

atari/Ste/ or atari/Diskutils/

the file should be in one or the other, and is called 'seekup.???'
(probably an LZH or ZIP). Hmmm, maybe I'll be luck and the system
won't crash if I try to look at my index file....

Wow, yep, it is in the atari/Diskutils/ directory - filename seekup10.lzh!

Bart:/

send ./Diskutils/seekup10.lzh
quit

(Just in case!)

I just re-read the docs (mdisk692.doc). Only thing I see that it says is that M-Disk is always drive M. Other than that, it looks wonderful (the US sick joke that reminds me of is "But aside from that, how did you like the play, Mrs. Lincoln?").

If anyone is going to give me the perfect answer (either moving M-Disk or REVERSIBLY disabling my last partition), please mail me as news on chinet lives on a failing disk.

I know exactly what you are referring to! In Gauntlet II, there is a
special adapter which allows 4 people to play at once. It fits onto
the printer port. However, the standard printer cable shorts out the
elf's fire button! Just unplug your printer cable and all will work
fine!

A way to make more people happy, but not change the situation, would be
to make everything hard-drive installable, but make a floppy with the
protection on it required to be in the disk drive. (e.g. a 'key' disk).

After installation, they could devote almost an entire disk to
'protection' even with 10k or so worth, that'd be a real pig for those
characters to crack! (What with most being 1k or smaller!)

I'm amazed no-one has done this on the ST (That I've seen...)

As I said, it was a passing idea, I do think that there might be some way
of testing the benefits of different cache setups etc, provided you control
the cache properly. The difficulty, as you know with GemBench, is making
the test reflect real-world operations as closely as possible.

>>og>But 200 pounds on the T28 might not be such a bad investment.

It's a German (of course) accelerator board, sold in the UK by Systems
Solutions. It is a 68000 (plus cache) running at 28MHz, and is only
available for certain ST models, eg STFM but not STe.

There is also a 36MHz version called, surprisingly enough, the T36.
They are 199 pounds and 299 respectively. Depending on whether you
ask me or Ofir Gal, they are either a reasonable buy (Ofir) or not (me).

Look at ACC-TRIS, a two-player TETRIS (or against the computer) that is fully
GEM and works under MultiTOS. It has just come out these days and is available
everywhere...
I didn't really try multitasking with it, but it works very well under multitos
so I guess it will do... And the computer can be very difficult to knock down.

Just put

shell <path>

where path is the path of the desktop to be used
e.g.
shell d:\desktop\desktop.prg

Works nicely, with the desktop being the 'default' background.

Steve.

3733. Storm

Newsgroup: comp.sys.atari.st
Date: 1993-12-17 11:36:50 UTC
From: john@albemuth.equinox.gen.nz
Message-ID: <H.eg.1NDU2Wa2Bhg@albemuth.equinox.gen.nz>
Source record: 196590

Hi there,

The other day I posted an article to here, saying how I was enjoying using Storm and in particular version 1.02. I have since had a few enquiries over where I got the patch to take it to 1.02. Since then I have lost most of my mailbox from a disk error so apologies for posting here rather than via mail.

The patch was hatched through the AtariNet file network to a local BBS. As it seems that a.a.u.e doesn't have it at the moment, I will endeavour to upload it there sometime soon. :-) I believe there is a newer patch on the way also, so if it makes it here I'll try to do the same.

Hope this helps someone.

Cheers,

Help!

I've been trying to transfer files off my ancient Atari 520st to a MacSE via MSDOS. Because the 3.5" 360k drives on my ST won't read an MS-DOS formatted 720k disk, I can't start the process. Does anyone know how I can get MS-DOS to

1) format a 3.5" disk single-sidedly? or
2) read single-sided atari disks?

Thanks an awful lot--especially to those of you who have helped me reach this deeper level of more knowledgable confusion,
Dan

Hi,

Quick question - does anyone know where I might get an official ATARI high density floppy drive from ? - preferable UK but I'm not too fussy ! :-) I know that System Solutions do one, but that's not an ATARI one and I don't want to have to cut the case on my Mega STe.

Thanks,

Martin

HiHo!

Has anyone successfully installed the GNU C++ Compiler on his
Atari and can send me his configuration?
I tried mgcc 2.55 gcc 2.45, 2.56 and 2.52 with mintlib 39
and the normal lib and the C++-lib 20 and I don't know
what else, and all I get when compiling a simple
'Hello world' program are internal compiler errors or
the linker can't find cout or other similar errors.
The standard gcc 2.55 with mintlib 39 is doing fine.

Thanks for the help in advance

joe

Hi!

It is not allowed to distribute the ICD-Utilities outside their BBS.
You are able to get the latest ICD-utils by connecting to one of their
BBS (not on the internet). Don't know the actual phone numbers (Ask you
Atari dealer).

Bye,
Wolfgang.

Hannu> example of good programming. -- Yes, I have short attention
Hannu> span. Could we move on, please?

That's funny... I didn't... Do you have a SCSI host adapter on it?

Actually, I've found many games which will not run with the HD turned
on. Phantasie III, for starters, and Dark Castle...

Why are Atari games so finicky? I would think that, considering the
limited vareity of hardware (at least compared to the PC world!)
programming ST games to be rugged would be at least less-than-difficult!

Also, why can so few games be installed on a hard disk???

>Just reinstall the software on another machine! You're OK as long as you
>have your original master disks.

No, Opcode's installation disks will only work _once_. So as soon as you have
a hd-crash, you'll have to get yourself new installation disks from the
manufacturer.
If you could use the installer disks as often as you please, the
copy-protection would of course be next to worthless, since copying the
installer disks would become possible.

The story is even worse. The installer not only installs the program but also
writes a kind of checksum-like-invisible-file somewhere on your hd. The
location of this file is marked and thus you may never move it -- i.e. don't
defragment your hd or else...
I understand the problems sw manufacturers have with pircay, but *this* kind of
solution is of course (IMnot-soHO) absolutely criminal too.

Bug fixes I think (especially to the C++ portion; it seems to change the
most between versions); I'm not sure though, I went from 2.3.3 to 2.4.5.

I use the Minix fs XFS under MiNT 1.08 (and 1.09 now); the 0.6 versions
are very stable, and I'm even using the strange ICD host utilities
(which have persistant bugs and their own way of doing things). I
haven't had a messed up filesystem yet with the 0.6 versions of the XFS.

BTW, this is on an ST with memory protection explicitly turned off (via
recompilation with no_mem_prot = 1 in one of the source files).

If the BBS software allows users access to any disk/path/file on your
system, it's worthless. Even the ftp daemon for OS/2 allows you to
limit all users to a specific directory.

A minix filesystem will also fix that problem.

>Jeffrey A. Krzysztow

I'm a happy Stalker user, and since this thread seems to have gone
into wishlist mode, here's what I'd like:

First and foremost, if possible, make Stalker work faster under
MiNT/Multitos. I've been told to get Connect for if I want to do
comms under MTOS, but I like Stalker and I think something is wrong
if users have to lose their software investment for the sake of
OS improvements. (Especially considering that Stalker is a clean
application).

I'm sure you've already given a fair bit of thought on improving Stalker's
general MiNT friendliness. There are probably a gazillion neat things
that could be done if Stalker took full advantage of the MiNT kernel.

Oh, Kermit would be a nice addition to the available protocols.

Good luck on your new project.

Cheers

Yves

But that's not the way machine ID's work in Unixland; you get a encrypted string to put in a file, which references the hardware ID, from the vendor. You cannot load the software and run it on another machine.

OK, I have a question about a GEM game and what it has to do...

Is it considered 'legal' to write directly to the screen memory to gain
the extra speed that is needed? As in, finding out where it is using Physbase()
(I think that's the call, it's been a while...) or by Malloc()'ing enough to
for the number of screens needed for buffering and such and then using Setscreen()
to set the video memory. Then writing directly to that memory to get the speed that
is needed.

Is this considered 'legal'?
It's the way I've been doing things, and the Falcon doesn't seem to mind, although
my program isn't true GEM (yet?) as it is resolution dependent, and my method for
getting the proper resolution is probably not totally 'proper'...

DOS should read single-sided disks with no trouble. I used to do it all
the time in DOS 2.1 days...

To format a disk under DOS as single-sided, use the single-sided option
(I think it's "/1"). There is also an option to use 8 sectors per track
instead of 9 (I think that's "/8"), which you might try using.

Sounds to me that while running in TT Medium it switched down to ST Low.
Does the screen become smaller? or does th graphic rez become finer?

If not I think it's only ST Low then...
>Somewhat off topic:
>Is it possible to automatically switch the monitor from Crazy Dots to TT
>video depending on the graphic mode selected at boot time?
>

If during booting up you press the <ESC> Key if will cancel booting into
CRDOTS and go into the TT resolution...if THAT is what you mean? However
to switch monitors while you are running CRDOTS in say TT Med rez. I don't
know if that is possible...but why would you do that? I mean run a CRDOTS
in TT Medium?

A little confused :)

Software for sale - - - - - Software for sale

Lexicor's Chronos, Prism Render, Prism Paint, Rosetta -- $250,
shipping included

Chronos is the BEST 3D animation program for the ST/TT. Unlike
CAD-3D, it's very, very easy to create 3D animations with this
program. It imports 3D2 files, so you can still use the objects you
have stored away, or create new ones with CyberSculpt.

Prism Render is used for rendering your animations. Chronos will render
up to 256 colors; Prism Render will render in more colors.

Prism Paint is a wonderful paint program that enables you to load the
animations you create and edit each frame individually.

Rosetta is a file translation program, used for converting different types
of 3D objects and other formats.

These three programs work best on a MegaSTE, TT, or accelerated ST or
Mega, although they work fine on a stock ST. They support the 68881 and
68882 as well. These are top-notch programs. I have BARELY used them,
since I haven't had much free time.

CyberSculpt -- $35, shipping included

One year at Comdex, when Lexicor was showing and selling their wares
there, Lee Seiler of Lexicor said that there were groups of
professional 3D animators and modelers who stopped by his booth. Some
were so amazed by CyberSculpt's capability and low cost that they
bought TTs just to run it! The cost of CyberSculpt plus a TT was a
bargain compared to what they had been using, so they jumped on the
opportunity. CyberSculpt works on any ST or TT (and I think Falcon)
in medium and high resolution.

MultiDesk Deluxe 3.4a -- $25, shipping included

If you want to load more than 6 desk accessories on a standard TOS
machine, this is the desk accessory and program to get. It's very
flexible. This version features non-resident desk accessories, so
you can load them into memory only when you really need them.

LookIt 1.2 / PopIt 1.3 -- $20, shipping included

LookIt is a fine utility for viewing text files and other files in
both text and hex modes. It has a lot of additional features, such
as marking blocks and saving them as files. You can even load a

series of files and switch between them.

PopIt is a desk accessory used for accessing your desk accessories with hot-keys. For example, if you want to bring up the Control Panel, instead of using your mouse to go under the Desk menu, simply type ALT-1, or any other key combination that you choose. Very useful utility!

DC Utilities -- $15, shipping included

Yes, some of it is a little outdated, but there's still some great stuff included on this disk. A couple of RAM disks, self-extracting archive utility, screenshot program, and even the first version of DC Squish! You can use this disk to upgrade to the new version 2!

Tempus 2 -- $15, shipping included

This is one fast and loaded text editor. Tons of features. A programmer's dream!

All these programs come with disks and original manuals. Chronos, Prism Paint, Rosetta, and MultiDesk Deluxe come in their original white three-ring binders. Everything is in excellent, pristine condition.

If interested, please contact me at ekrimen@netcom.com, or on GEnie at AEO.5.

Thanks!

Hello Steve!

>ST-ZIP's interface however, is nice and simple! Even the local 'don't
>have a clue's ' Can work it okay!

Use the GEM-pack-shell "2in1" (v.1.02) to get a ST-ZIP-like interface
(only 20DM shareware, author gregor_duchalski@do.maus.de).
Alternativly it has (well known by users of GXSHELL") 1-icon-handling.
Easy to set-up!

GREAT! That was the thing I ever looked for.

Sigh, why didn't I know about this 12 months ago when I had the time/
inclination to port such things... :-(

[Not your fault of course!]

(sorry about previous empty post - something's goofy)

Does anyone know if the program Spectrum 512 or the accessory Unispec will work on a Mega STE? I am unable to get UNISPEC.ACC to allow keyboard presses without bombing, despite running at 8 MHz no cache.

Thanks,
Scott

3776. Strange Falcon HD problem

Newsgroup: comp.sys.atari.st
Date: 1993-12-18 02:02:31 UTC
From: Jinlung Fung <jf4y+@andrew.cmu.edu>
Message-ID: <ch4aGrC00iV1I6KuRJ@andrew.cmu.edu>
Source record: 196522

Hi folks,

Have a strange problem with my external SCSI hard disks on the Falcon. I used to hook the drives up without a casing and the SCSI-II cable from the Falcon goes to my CDC drive and chained to a Syquest. Recently, I bought a casing and installed the drives in there. However, now my Syquest is connected on a shorter ribbon length compared to the CDC (which I think does not matter).

However, a strange problem cropped up. Even with the power supply to the drives shut off, if the Falcon is on, the 'Power' light on the casing (which I connected to the +5V line on the external PSU) stays on and the Syquest light indicators turn on dimly. If I tried to turn on the external PSU now, the drives do not respond by booting up until I turn the Falcon off completely (warm boot doesn't help) and then it starts booting up. I never had this problem with my previous setup. Does anyone have any ideas why this is happening?? (is it because the SCSI-II has a power line pin that interferes?? If so, why did my old setup work?)

Thanx for the help!

Ta Ta For Now,
Michael Fung

Hmmm...these are the older ANTIC Products and SPC is a very tricky format
that does things that your Mega STe doesn't like. ANTIC went bust before
the Mega STe came out I believe, so I do NOT know of an updated SPC
viewer.

Not even Cyber Paint 2 will run correctly on the Mega STe..

If you are using STalker on a Falcon, set it for TT/STE Modem 2 Port instead
of Serial port. This will not only give you access to the higher speeds,
but should let the DCD work properly if your modem supports it.

The next version of STalker should correctly recognize the Falcon.

Unplugging your printer will work, but it is overkill and a pain. Simply
turn your printer on, and set it to "offline". This will work fine, and
is much easier.

Well, I suppose as long as you keep all your drawing within your own window by
either making sure your window is on top or using Gem calls to walk the
rectangle list and only updating those areas using Direct To Screen, it might
be okay, though certainly not rez independant, since 256 color mode on a Falcon
is diffrent than 256 color mode on, say a Crazy Dots board. It could work
in theory, but I don't consider myself any sort of expert on the subject.

Well, as long as I've got Gribnif on the net...

I'm using STalker 3.01 and STeno 2.00 -- a great combination, IMO. I have but one problem: I can't use "Paste Clipboard (text)" (Alt-V) in STalker at all. It doesn't matter if I cut the text in STeno or STalker, STalker can't paste it. STeno recognizes it just fine, and I know my clipboard parameters are set up identically for both, but still this eludes me.

Any answers?

3783. STraight FAX & Sportster Modem

Newsgroup: comp.sys.atari.st
Date: 1993-12-18 06:21:36 UTC
From: PETERS@bdt.COM
Message-ID: <CI7wC1.47q@bdt.com>
Source record: 196533

Since my last posting, I've received a reply from Charles Smeton that an upgrade will be available soon which works with the Sportster. Apparently there's some problems with the basic design of the modem hardware. I would be interested in hearing about problems other people have had with the Robotics Sportster.

I also received a response from Dave at TOAD, who informed me that a new version of the modem testing program is available. The old one didn't work with the Sportster.

3784. Re: CoNNect problems

Why wait? I got my copy about two days ago....

> Rob
>
>...dare I ask the difference between 2.41 and 2.42 (other than the fact
>that I have neither right now ;-)

Well, the best new feature that I can think of is that you can go into
an editor like emacs, and if you set the correct button, you can double-click
the cursor to that position instead of having to do it manually (all those
cntl-Ps, -Fs, -Ns, -Bs). Very nice...only now I have to figure out the emacs
commands to allow the interpretation of the cursor keys to the appropriate
command (right now, all I get is Bs when I use the cursor command). Oh, BTW,
you need to hold the CNTL key down while double clicking to do that.

Oh, don't forget - he changed his "waiting" icon from the little
coffee mug icon to an animated icon of a quartered circle that rotates very
smoothly (I guess he took out the coffee icon so that when CoNnect gets an
interface to a coffee maker, you won't be confused about whether CoNnect is
just thinkging real hard, or whether it is making a pot of coffee).
:)

(Sorry Wolfgang, it had to be said. :)

Actually, now that I pull up the help and look at the history, I
notice the following changes:

The help-text now has icons for a going back a step, starting at the "base" of
the help tree, and one for listing all of the help sections alphabetically
(makes it easy to find "history" that way).

There is a new box for monitoring the file up/downloads. I haven't made up my
mind whether it is better or worse. I am tending to like the old style
because the new style has the information too close to each other and becomes
hard to read (which is the block CPS rate, and whichis the overal rate? ... Oh
yeah...). Anyone else agree/disagree?

zmodem upload is faster (yea!).

CompuServe B, B+ works better.

And of course, the reason for the additional charge: The %#@^%#$ hackers who broke his encryption code forced Wolfgang to spend time making better encryption algorythms.

I, however, can't wait until 2.5 is released - he says it will have fax support!!!!

(was there a "should" in there...Wolfgang?)

3786. Colour Icon Editor

Newsgroup: comp.sys.atari.st
Date: 1993-12-18 09:26:13 UTC
From: S.P.Taylor@bradford.ac.uk
Message-ID: <1993Dec18.092613.25736@bradford.ac.uk>
Source record: 196536

Right, so the only colour Icon editor is Interface. I just spoke to HiSoft, and they said that it was temporarily unavailable. But they also said that Atari used the Windoze icon editor to set up the original DESKICON.RSC file, and then ported it across. They said it would be a fairly simple operation.

So has anyone who has bought the Atari Compendium and does some programming got time to write a simple file conversion utility? I feel this would be welcomed with open arms into the Falcon owning community, and could attract a substantial shareware fee.

Any takers???

Steve Taylor.

3787. Video Shifter wanted...

Newsgroup: comp.sys.atari.st
Date: 1993-12-18 09:29:42 UTC
From: S.P.Taylor@bradford.ac.uk
Message-ID: <1993Dec18.092942.25787@bradford.ac.uk>
Source record: 196537

So, has anyone got an old Video Shifter chip they want to sell me? It should be the one from the 1987 STFM, I don't know the code number. I am told there is a 5 month waiting list for new replacements, and although I am not sure I believe the chap who told me, I would like a (cheaper) 2nd hand one anyway!

Please respond by E-mail as I have a huge net backlog to read!.

Steve Taylor.

3788. PD IMG editor???

Newsgroup: comp.sys.atari.st
Date: 1993-12-18 09:31:32 UTC
From: S.P.Taylor@bradford.ac.uk
Message-ID: <1993Dec18.093132.25857@bradford.ac.uk>
Source record: 196538

Right, just a quickie.
Is there a PD program capable of editing B&W IMG files reliably?
I know there is a commercial one or two, but I can't afford it, and I
don't expect to use it often.

Anyway, thanks,

Steve Taylor.

3789. New GEMBench release

Newsgroup: comp.sys.atari.st
Date: 1993-12-18 15:48:48 UTC
From: ogal@cix.compulink.co.uk
Message-ID: <CI8MLC.74B@cix.compulink.co.uk>
Source record: 196539

New GEMBench release coming soon to your favourite BBS

New Features and bug fixes in V3.30
---

* GEMBench got a face lift. The new design is based on v2 of the
HiSoft BASIC GEM Toolbox, featuring check buttons, a menu bar
inside the GEMBench main window and keyboard shortcuts for the
popup menus.

The Hardware Reference popup menus now have keyboard
shortcuts, F1 to F6 for computer type and Shift+F1 to Shift+F6
for the PC based GEMulator.

The window menu doubles most of the main menu bar but also
includes the registration dialog. The menu bar now replaces
the buttons that used to be located on the right side of the
window.

* GEMBench now works in TrueColour on the Falcon. It should also
work on the Nova TC card and Crazy Dots TC.

* A new registration scheme is now in effect. See REGISTER.TXT
for details.

* GEMBench does not crash anymore when trying to save to a
write-protected disk.

* There is no exit button for the main window. You can still
close it using the Closer gadget or by pressing Undo.

* In case you didn't know GEMBench works under MTOS, Mag!x and Geneva.

I was very happy to see that GEMBench 3.25 was number 2 on the GENIE
downloads chart in September. So I figured out of over 100 downloads in a
single month there must be a few people out there that actually liked the
program. However, I got *no* US registration so far. The UK response has
been much better and I even got a few German shareware contribution.
I have a few other projects on the go, but going by the response so far I
am reluctant to spend too much time on them.

Unplug your printer and all will be fine. The problem is that Gauntlet II works with a 4 way joystick adaptor that uses your serial port to provide an extra two joystick ports. Unfortunately your printer does a pretty good job of simulating the fire button of one of these.

Hang on a second, whatever bugs there may be are fairly minor, and
certainly don't effect its playability. And it works flawlessly across all
(16 bit or more) Atari machines, is hard disk installable, etc.

>First we had the utterly bugged Civilisation and now... Elite II !!!
>
Well, I found civilisation only had one bug that effected its playability,
and someone posted a patch for that. However I'm not going to defend
Microprose's attitude to Atari machines (nor condemn it - business goes
where the money is)

>Is this some sort of plot against Atari?
>
If anything the Atari version seems to have less bugs than the Amiga
version. It also runs faster on a Falcon than an A1200. And as someone else
pointed out the bugs are in the PC version as well

>I'm very dissapointed and wont buy Frontier until its been fixed. I fear thi

Well your loss, I'm afraid. If you like this sort of game then its a
must-have.

>gameplay like? Complexity... Lasting appeal etc...
>

The gameplay is much the same as the original elite, though there's a lot more depth to it. One of the nice things is that you can now upgrade your ship (standard startup is with a fighter as opposed to a cobra Mk3). There are a lot more ways to play as well, including working your way up in the military of either side. All in all, a decent successor. On the subject of upgrading ships, it would have been nice if you could keep your old ship (perhaps paying for it to be stored somewhere, or paying a crew to operate a regular run with it) when upgrading.

One of the problems (IMHO) with the original Elite was that combat was too easy. You targeted the enemy at a distance and shot them down before they even fired at you. This is no longer the case in Elite II. Combat is a lot trickier (though it gets easier with a bigger laser). You can sidestep this by targeting your autopilot on the enemy ship and then just firing at it as appropriate (didn't have much choice with the A600 version as it was almost impossible to kill anything manually, so it was quite a surprise when it was easier on the falcon)

)>Surely this would be very expensive as you would need to create a custom ROM for
)>each machine rather than just stamping out x000 from a standard copy?
)
)Possibly. I have no idea how much it would cost to generate a random
)number on each copy and stick it a t a fixed address.
)
)>How would the prog know it was the same machine/owner and not that it was being
)>installed on another machine?
)
)When you install the software, your machine's id would be written into the
)installation program, preventing you from installing it on a different
)machine. If you get another machine then, no simple solution. Hey, I
)didn't say it was a perfect solution :-)

But, what is to prevent you from copying the installation program
BEFORE you do the install? This is still no protection at all.

basically, there is no protection that works - so why should I pay for
the development time that went into the protection? I'm sure
programers don't like thier software being stolen, but protection
simply does not work. There is always a way around any protection.

In article <1993Dec16.175102.14949@newshost.lanl.gov> hutch@bellman.lanl.gov (John Hutchinson) writes:
)>instead of ranting about developers getting ripped off, figure out a
)>way that both developer rights and consumer rights can be protected.
)
)If anyone can figure out a foolproof way to do this, it should be worth a LOT
)of money to a LOT of people/organizations. To date, however, the industry has
)not come up with the right scheme that satisfies everyone's needs. It is NOT
)an easy solution to come up with.
)
)One primary difference between books/CD's/videos and software that has not
)yet been mentioned is the *ease* of which these can be stolen (duplicated).
)Because software can be copied so easily, quickly and cheaply, it presents a
)much more difficult problem than these other items of intellectual property.

While this is true with books, I think the real problem lies not with
the ease of copying, but in the perfection of the copy - the copy is
identical to the original in all aspects that matter. You can record
CD's onto tape, but the sound quality is (technically) not as good.

)
)I really don't understand the arguments some people make against limited DEMO
)versions of software products, however. For the most part, it really does
)sound (IMHO) that the people who complain the loudest about demos are those
)that would rather steal the s/w anyway. Demos that are well designed should
)certainly give the user enough of a "feel" for the product to know if they
)should purchase it or not. Granted, a few demos out there may be lame to
)some extent, but the vast majority are really more than sufficient. Loud,
)unjustified arguments to the contrary go direct to alt.pirate.bitching.trash.
)I agree that Atari software demos do seem to be few in number, but then
)again, so is Atari software in general. ;-)
)

I aggree, demo versions would cut down on piracy dramatically.
Connect is a good example of a demo done right. I've registered
Connect now...

)Personally, I think the wave of the future is the demo CD. I have 3 of these
)for the Macintosh with well over 1Gb of not only very capable demos, but also
)the REAL products on the CDs. You try the demo and if you like it, you call
)the 800 number with a credit card and they give you an unlock code to copy
)the selected software off the CD to your hard disk or floppies. Electronic
)manuals are on the CD and/or they ship you the paper manuals. A good system.
)

What happend to that developer CD? Is that still going to come out?

3802. Help: HP DeskWriter + Spectre GCR??

Newsgroup: comp.sys.atari.st
Date: 1993-12-19 01:08:20 UTC
From: yonder@netcom.com
Message-ID: <yonderCI9CHy.D8p@netcom.com>
Source record: 196456

Somebody _please_ help:

I'm trying to hook my 1040ST+SpectreGCR to an HP DeskWriter.

(1) Will it work? Please let me know if you have this working.

(2) How do I make it work? (hopefully the answer to (1) is yes!).

I've constructed a cable as described in appendix C of my Spectre docs: which is an Atari serial (DB25) to ImageWriter II (8-pin DIN) printer.

I configured spectre to use the serial port as the printer port under the "printer" menu.

My Spectre GCR is version 3.0.

I've loaded all the software from the deskwriter installation disks (release 2) -- including screen fonts and printer fonts.

symptoms: I go to print a document (in MS Word 4.0) and I can access the page setup and print resources fine. When the Spectre attempts to print, it looks like everthing is working fine (the hard disk is accessed, the "hit command-. to stop" dialogue comes up, and I can still move the cursor (now a stopped watch), but nothing ever happens at the printer. At this point I must reboot.

....Thanks Chris (yonder@netcom.com)

3812. Falcon hardware questions

Newsgroup: comp.sys.atari.st
Date: 1993-12-19 17:27:11 UTC
From: ATWARECK@ELECTRICAL.watstar.uwaterloo.ca
Message-ID: <ATWARECK.5.2D148EEE@ELECTRICAL.watstar.uwaterloo.ca>
Source record: 196481
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

Hi,

My recently purchased Falcon is exhibiting some strange behavior; I am
curious if any other Falcon owners have had similar experiences:

1) The sound output is REALLY noisy, especially during boot-ups;
nowhere near the advertised 'CD' quality (CD quality is rougly 96dB S/N
ratio, and audibly, the Falcon is nowhere close to it)

2) The monochrome mode sometimes boots with a 'wrap-around' screen,
similar to what some ST's experience. This also ocasionally happens after a
video mode change (to monochrome).

3) All four colour modes and ST LOW mode have narrow white borders
directly on the left and right sides of the display area, rougly 16 pixels
in 640 horizontal rezolution, although these borders are not the same size
on both sides.

Any comments are welcome!
Thanks,

Falcon030: $1299 for 4 megs of RAM/85 meg hard drive. Also
comes with MultiTOS, AtariWorks, SpeedoGDOS, other stuff.
TT030: Does anyone know? Supposedly Atari is releasing more
of these, but they haven't so far (as far as i know).
Of course, you can also find other ST machines from dealers.
A four meg STe can be had for under $500.
Hope this helps,
Scott tirrell

I think I prefered the older style myself.

>zmodem upload is faster (yea!).

Yea! I was able to sustain about 1800cps between my 14.4k modems: one at home, and one on a VAX running VMS and sz 3.03 (old). Dunno if its the new version of CoNnect, but I havent had any problems with CRC errors, timeouts, and packet retransmissions.

Prior, I was getting between 1500 and 1600 cps...

3815. GCC/GAS documentation

Newsgroup: comp.sys.atari.st
Date: 1993-12-19 18:39:22 UTC
From: millsp@govonca.gov.on.ca
Message-ID: <1993Dec19.183922.17974@govonca.gov.on.ca>
Source record: 196494

I'd like to know an ftp site (and path, I guess) for files that
document the syntax for the gas assembler and for the gcc language
extensions that go beyond the C standard.

Some of my immediate hang-ups are:
What does gas use for "address register indirect with postincrement"
(e.g. cmp.l (a0)+, (a1)+ in the REAL world)?

I attempted to get gcc to generate code that might do the above, but
it wouldn't -- it insisted on doing the compare and then explicitly
adding 4 to each address register. (And my reason for wanting to know
about gcc extensions to C is that while trying to force it to generate
the code I wanted, I told it to use the "register" storage class for
a couple of pointers. It's response was to complain that I didn't tell
it WHICH registers. Whose C syntax are we using, anyway?)

3816. mit2mot vs. gcc

Newsgroup: comp.sys.atari.st
Date: 1993-12-19 18:46:34 UTC
From: millsp@govonca.gov.on.ca
Message-ID: <1993Dec19.184634.18546@govonca.gov.on.ca>
Source record: 196495

Converting gas syntax to motorola sounded like an interesting idea.
My first attempt at using mit2mot to do that, however, got me enough
error messages that I assume I'm doing something wrong. The kinds of
things that gcc generates and mit2mot gets sick on are:
.skip
jbsr
pea 1024:w
lines with multiple instructions separated by commas, and others that
were too esoteric for me to analyze at a glance.

Any suggestions would be appreciated.

>
> What next, or what have I flubbed?

The spoiler hits!

Enter each station once, don't leave when it asks you; you'll be fine if
you're powerful enough.

Kill Death by force, not by Hellfire. Hellfire doesn't leave a corpse
or any items behind... it simply erases the victim.

Toss Death's scythe into the Void station.

Jump in after it.

This would be a _serious_ pain in the butt. Can you imagine scrambling through dozens of disks every time you ran a commercial program? "Now where is that $%#$% disk..." When I have something installed on my hard drive, I want to click on it (or type the name) and have it run. I'm one of those people that can't even stand running packed programs due to the speed hit; a floppy check would annoy me even more. I'll put up with it for games (for example, Uninvited runs nicely off my hard drive, as long as I've got disk 1 in the floppy that that @#$%@$ key disk check), but not for applications that I could be in and out of a dozen times in one day.

Then again, maybe everyone has neater desks than I do...

> would have been better if more people were there (Maybe there were).

The thing that annoys me is the cost of the entry fee these days, 7 quid for
the international computer show plus 3.50 train fare makes 10 quid.

I remember the days when entry to these things used to be 3 or 4 quid.

> but other stuff did not have much in the way of discounts. For example
> memory
> ipgrades, at the lowest for the STe, were 45 pounds for 2 Meg....this

>The market is driven by lots of hype. It seems natural for
>a stock to be inflated by hype, and then drop to normal
>levels, the same applies to the 3DO Company, who was up around
>45 for quite some time, and has slowly dropped to around 30.
>

Yeah, you are right. It is driven by lots of hype but a lot of other
things are considered by shareholders.

The first thing was a report by some man that Atari's stock will be around
$4-$5 next year. Everyone sold large quantities pretty cheaply after
they hard this report.

Atari only is reported to be selling 20,000 Jaguars this year. I heard a
report that it is 100,000 but it was not announced publicly by an
Atari representative.

The Jaguar was suppose to cost about $199 when first released. Atari then
raised the price stating they did not include the cartridge in this
figure! That demonstrated two things: 1) the product won't be in as much
demand as it was when it was at $199. 2) Atari is still being
mismanaged somewhat if they don't even realize that a cartridge should at
least come with the system when introduced. $249.95 is a large jump
in price--I don't care what anyone says.

The sales target for next year (worldwide I believe) is 500,000 units.
This is nothing. Nintendo sold 4 million of the SNES in the United States
in the first 6-7 months!

And of course, after the big media splash the Jaguar did. You would expect
the stock to settle somewhere. But the problem was nobody knew if the
splash was over with and it seemed to be at $12.00.

>

Some things that would boost the price of Atari stock are if Atari announced
that they would be making over a million Jaguars for next year. Or if

Atari announced they are lowering the price to $229. Or if Atari announced how successful it was this year so that major newspapers would report it. The price would also stablize more if Atari had more than one major product on the market. Atari doesn't even comment about how well the Falcon030 is doing worldwide. The only product is Jaguar, Jaguar, and Jaguar.

Source record: 196489

In a previous article, amiga@hosta.dircon.co.uk (Dino Dini) says:
+The Warning about it 'being full of bugs' and crashing all the time can
+only apply to this particular setup. The game has been extensively tested
+on 1040STFM and MEGA 2 ST's, and the released version has no crashes at
+all as far as I am aware. (Certainly they have not been reported to me by
+Virgin). So you should be able to buy in confidence (at least of you
+don't have a MEGA 4).

I installed a 2Mb reset-proof ramdisk as recommended by several posters.
This solved most of the problems with the game crashing. But I managed to
find a sequence of actions which caused a crash, ramdisk or no ramdisk.
The details have been emailed to Dino Dini himself. Either there's no way
around a 4Mb incompatibility problem, or Virgin need new playtesters. (:

Having had a chance to play it properly, I can honestly say that it's head
and shoulders above every other football game there is on the ST, even
taking the problems I have had with it into consideration.

More news as it happens.

Stephen

|> C-Kermit even bigger that Stalker, would it not...???

Maybe, maybe not. Not being a programmer, I won't venture into this question, except perhaps to say that I am not looking for the whole C-Kermit sheebang, with terminal emulation, on-line help, etc. All I want is the file transfer protocol (it was imlemented in Uniterm, which as I recall is not such a large program).

If implementing Kermit for Stalker really involves that much code, perhaps then the solution is to allow Stalker and C-Kermit to multitask under MTOS.

|>
|> I found Stalker very buggy, does not support ^@ from memory, (null command)

Funny, I frequently use Stalker to log on the computers at work, and I always use emacs. Never had a problem I didn't have myself to blame for. :)

3835. Archiver Wars (was Re: GCC)

Newsgroup: comp.sys.atari.st
Date: 1993-12-20 02:47:46 UTC
From: cherborth@semprini.waterloo-rdp.on.ca
Message-ID: <H.eg.L702KUDNYsY@semprini.waterloo-rdp.on.ca>
Source record: 196435

Contemporary archiver tests... I took a few minutes tonight and compiled some statistics for the current crop of archivers to fuel the current flame war. :-)

It should be obvious from these tests that there are two "classes" of archiver here. The algorithm used by lharc and zoo is inferior to the one being used by zip and gzip (GNU zip). Part of the extra overhead in zip (compared to gzip) will be due to the fact that zip is a true archiver, while gzip is a compressor (ie, it only compresses one file, it doesn't compress several files into one archive).

There are also two timing classes here; the more portable zoo and gzip, written in ANSI C, are slower than the nonportable lharc and stzip, using 68000 assembler (I'm assuming stzip uses hand-coded assembler). Personally, I'd rather have C code, which can be easily recompiled on a new platform with instant optimisation for that platform (ie, -m68020 flag in GNU C to optimise for TTs and Falcons). There are also C versions of lharc (Japanese, but easy to build on a UNIX system) and zip (from the Info-Zip project) available.

File 1 - testfile.tar, 140288 bytes; source code and compiled programs

Archiver	Compressed Size	Compression Time	Decompression Time
lharc	71505 (139.3%)	0:45.22 (132.2%)	0:08.96 (100.0%)
zoo	71639 (139.6%)	1:14.91 (219.0%)	0:18.76 (209.4%)
stzip	52530 (102.4%)	0:34.20 (100.0%)	0:10.89 (121.5%)
gzip	51316 (100.0%)	1:08.60 (200.6%)	0:09.24 (103.1%)

On this file, gzip compressed the best (by a whopping 1214 bytes; insignificant unless you're transferring at <= 1200 baud). stzip compressed the fastest (by 11.02 seconds), and lharc decompressed the fastest (by 0.28 seconds).

File 2 - testfile.tar, 1401856 bytes; source code, object files, and a compiled binary (MiNT 1.09 source + object files + compiled mint.prg)

Archiver	Compressed Size	Compression Time	Decompression Time
lharc	509918 (107.0%)	6:40.44 (100.0%)	0:47.86 (100.0%)
zoo	510052 (107.1%)	12:09.21 (182.1%)	2:06.05 (263.4%)
stzip	478620 (100.5%)	6:47.64 (101.8%)	1:13.34 (153.2%)
gzip	476359 (100.0%)	14:32.34 (217.8%)	1:14.47 (155.6%)

On this file, gzip compressed the best (by 2261... insignificant on a file this size, though it does make it one cluster larger on small disks). lharc compressed the fastest (by 7.2 seconds... insignificant in these times), and also uncompressed the fastest (by 25.48 seconds, another insignificant value).

Feel free to whip this into the Software FAQ or your local archiver flame fest. No clear winners in any category, really... the differences between archivers in the same class (for compression and for time) are rather insignificant.

>not come up with the right scheme that satisfies everyone's needs. It is NOT
>an easy solution to come up with.

I believe the solution lies in the area of public key encryption. I believe
that the only reason why it has not been explored is that the essential
information has been withheld for a variety of reasons (insert
favorite conspiracy theory here...)

one possible mechanism (will probably will be trashed by by those in
the know on PKE) is that you will get a key from a vendor constructed
from your public key. decrypting the key will yield another key that
is decrypted by the application so it can know how to run. what
will prevent copying of the mfg's key to nother machine?? beats the
hell out of me! ask a cypherpunk or cryptophreak how to play this game :-)
maybe something from the digital cash world will work.

>One primary difference between books/CD's/videos and software that has not
>yet been mentioned is the *ease* of which these can be stolen (duplicated).
>Because software can be copied so easily, quickly and cheaply, it presents a
>much more difficult problem than these other items of intellectual property.

do I have to think of everything??? :-) the ease of duplication
is something sw users have come to count on and this "feature" is one
that folks will not want to loose. after all, I really like being able
to collect my applications on one hard disk and not have to remove
and insert something evertime I change apps.

>I really don't understand the arguments some people make against limited DEMO
>versions of software products, however. For the most part, it really does
...
in many ways, I think really good demos are harder to make than the real app.

>Personally, I think the wave of the future is the demo CD. I have 3 of these
...

it can be a good system if and only if the key follows the user from
machine to machine. it would be really nice to have a apps description
that I could carry around from machine to machine (and backup).
yea, yea, I know I'm dreaming and it won't happen till uncle bill
has achieved total world domination via NT...

>BTW, this has been a good discussion on the net from you both (Eric & Gordie).
>Let's keep it professional *and* cordial, shall we? :)

deal. I've been having a series of bad hands (ulner RSI) days lately so I've
been ignoring posts when I couldn't be rational. if I seem to be
flaming, please do me a favor and ignore what I shouldn't have posted :-)

I have a PCB board designer program that needs a key disk to run and
I'm ready to toss the application. I lost countless hours trying to figure
out why I couldn't mod the demo boards until I ran it off the second
key disk I bought as a backup. the stupid key disk was defective and
the app didn't tell me! it just assumed that I was running a stolen
copy and stuck me in demo mode.

I think we need a better technique... :-)

all I can say (with a bit of a :-) is:

from wired 2.01.35 without permission...

In your face disclaimer: Ever read those microscopic license disclaimers
before installing your latest software purchase? We thought not, which
is why we couldn't pass up reprinting this one, from Haventree
Software's EasyFlow program. "If EasyFlow doesn't work: tough. If
you loose millions because EasyFlow messes up, it's you that's out
millions, not us. If you don't like this disclaimer: tough. We reserve
the right to do the absolute minimum provided by law up to and
including nothing. This is basicly the same disclaimer that comes with
all software packages, but ours is in plain english and theirs is
in legalese. We didn't want to include any disclaimer at all, but
our lawyers insisted."

I don't know what would be worse, product liability law catching up
with software or software setting liability standards for the rest of
the world...

I am sure that this has been discussed here before, but is there a patch which corrects that a single click is taken as two clicks? This happens to me now that I have upgraded to TOS 2.06. Are there any other patchs out for 2.06?

Thanks folks,

Actually, after using it more, I find that I _really_ like the new
accounting for multiple files - files downloaded, time for _all_ files to be
downloaded, not just the one you are presently on, etc. I guess to put all
that info on the screen and not make it bigger, he had to push some info
together...<sigh>

Cool. Until they get the 14.4ks installed here at Poly, I won't see a
whole lot of speed improvement on the the present 2.4k/9.6k modem pool.

Actually, I think the Help icons (at the top of each help window) was
one of the most helpful changes - especially the "list all" icon. It makes a
nice alphabetised list of the entire help file.

How to get drumpats.doc, drumpats.zip, drums.doc and drums.zip from the
archive at
Dept. of Computer Science, Utrecht University:

NOTE: In the following I have assumed your mail address is john@highbrow.edu.

Of course you must substitute your own address for this. This should be
a valid internet or uucp address. For bitnet users name@host.BITNET
usually works.

by FTP: (please restrict access to weekends or evening/night (i.e. between
about 20.00 and 0900 UTC).

ftp ftp.cs.ruu.nl [131.211.80.17]
user name: anonymous or ftp
password: your own email address (e.g. john@highbrow.edu)
Don't forget to set binary mode if the file is a tar/arc/zoo archive,
compressed or in any other way contains binary data.
get pub/MIDI/SONGS/MISC/drumpats.doc
get pub/MIDI/SONGS/MISC/drumpats.zip
get pub/MIDI/SONGS/MISC/drums.doc
get pub/MIDI/SONGS/MISC/drums.zip

(or first cd to the directory, and then get the local filename part, to
avoid "permission denied" on your system)

by mail-server:

send the following message to
mail-server@cs.ruu.nl (or uunet!mcsun!sun4nl!ruuinf!mail-server):

begin
path john@highbrow.edu (PLEASE SUBSTITUTE *YOUR* ADDRESS)
send MIDI/SONGS/MISC/drumpats.doc
send MIDI/SONGS/MISC/drumpats.zip
send MIDI/SONGS/MISC/drums.doc
send MIDI/SONGS/MISC/drums.zip
end

NOTE: *** PLEASE USE VALID INTERNET ADDRESSES IF POSSIBLE. DO NOT USE
ADDRESSES WITH ! and @ MIXED !!!! BITNETTERS USE USER@HOST.BITNET ***

The path command can be deleted if we receive a valid from address in your
message. If this is the first time you use our mail server, we suggest you
first issue the request:
send HELP

Why do Medusa (Swiss?) license Benelux ROMs? Surely it would be more
sensible in the long term to license 4.04 ROMs which are
internationalised.

3851. Stalker 3.0 buffer

Newsgroup: comp.sys.atari.st
Date: 1993-12-20 12:47:50 UTC
From: ai063@FreeNet.Carleton.CA
Message-ID: <CIC3Jr.5y@freenet.carleton.ca>
Source record: 196406

When I log on to most local BBSs, the NON-CAPTURE buffer collects all the screen text (up to 2000 lines) without having to switch to Capture mode. When I log on to Carleton U. FreeNet, the NON-CAPTURE mode collects only about a screenful, so I can't scroll back very far to read something I've missed. The same thing happens with the Ottawa Public Library. Does it have something to do with the VT100 protocol (used at FreeNet) or the ANSI protocol (used with the Library). My 1040ST with STalker 3.0 and the GVC 2400 modem usually runs with VT52. Is there some adjustment I can make to the software or hardware to get the NON-CAPTURE buffer to collect text from the screen? Thanks.

There is no need for that. If you don't want the AUTO-folder to be executed, press CONTROL during booting, if you just want to leave out NVDI press both SHIFT keys!

3853. Disk Backup

Newsgroup: comp.sys.atari.st
Date: 1993-12-20 13:14:53 UTC
From: psurge@cs.utexas.edu
Message-ID: <2f48gd$65s@muleshoe.cs.utexas.edu>
Source record: 196408

I am moving in the next few days and I need a good utility to back up my hard disks before I transport them. I have a Mega4 STe with a high density floppy drive. Are there any backup utilities that will use the high density disks? Most of the ones I have tried seem to have a hang up somewhere along the line or assume the disk is a certain size. Elfback seems nice but it always tells me I don't have enough memory for the ram disk (even though I still have over 3 megs free), uses the hard disk, then fails to copy the LZH file over to the disk.

I have a sneaky suspicion that it may be my disks, they are preformatted IBM, but I didn't think that was a problem...

3854. Which version of GCC

Newsgroup: comp.sys.atari.st
Date: 1993-12-20 13:28:11 UTC
From: mkite@lincoln.gpsemi.com
Message-ID: <CIC5F0.Etn@lincoln.gpsemi.com>
Source record: 196421

Ok, I've been watching the discussion about gcc for a while and I'm still confused. I have a Mega STe with 2 Mb of memory. Firstly, is that enough to run gcc ? Secondly, which version of gcc should I get ? what about if I want to run with MiNT (when I get round to getting that sorted) ?

Thanks in advance for any guidance offered (e-mail or postings, not too bothered).

Later,

Martin

One of them is to disable the DMA sound capabilities and one of them is
to enable a `high-density' button in the desktop's format routine, but
don't ask me which one! :-(

Hi everybody,

I am not sure if this is the correct newsgroup, but I got no replies in the newsgroup that I thought was most appropriate (some PC graphics newsgroup). Well, I have a number of Spectrum pictures (extensions .SPX and .SPC), and I only have a PC (sorry to invade your newsgroup). Does anybody know if there are programs for a PC that can display these kinds of pictures. If the answer is yes, what are they called, and where (FTP) can I get them?

Thank you very much,
Cheers,
Ben Jos.

Good idea, but can we talk Atari into doing this? :)

Of course, this doesn't prevent the user from making a copy of the software
first and using the copy to install on the hardware.

Seriously though, isn't such a scheme possible with PC's (reading the BIOS set)
and didn't they try this awhile back. I seem to remember something about it.

Other than a minor inconvenience, I'd say the chief complaint is one of cost. Dongles are hardware which adds significantly to the cost of the software package. Minor in relation to the cost of major packages like Cubase, perhaps, but prohibitive for less expensive items like games. And who wants a drawer full of dongles that you have to swap all the time?

Source record: 196448

One think about piracy, is the price. With CD's only being maybe about
$10US each, they are affordable. But when software is $50US for something
'not-worth-it', it'll be cracked and copied within minutes of being
released!

People have to make a living, but companies should study economics a bit,
high-price=low-demand and low-price=high-demand. Get somewhere
in the middle rather than in the former, and they'd be okay!
(Mind-you, usually high-price doesn't change demand, just sales!)

Less individual profit would lead to greater overall profit!

Hi,
I've been off the net for a while and was wondering if
anything new has come around to give the ST some new life? What
is OS9? What is GEMBench? Is there a new LZH ttp? 9Beyond
(oops) I meant: Beyond Quester's LZH 2.01i? Are there any new
PD do it all de-arcing shells? Has anyone released any new
software based emulators for the ST. (Hopefully someday someone
will release something like PC Ditto in PD! :-)) Has anyone
seen anything that really knocked their socks off lately? And...
Has anyone heard of any new programs from David Becker. (The
ZEST and DBWriter guy. Excellent stuff.)
If you can answer any or all of the above questions,
I would appreciate some E-mail.
Thanx in ADVNC,
G. II. L.

Just nit-picking, but shouldn't that reference to 'serial-port' be 'parallel port'? I know that's where my 4-player adaptor goes .... ;^)

Karl.

I'm using plain ol' MTOS. I believe that is MiNT 1.04. Guess I should
get get that compiler working on the latest MiNT...

I think I *have* uploaded Diablo 1.6 to a.a.u.e. Anyway: it's on
ftp.uni-muenster.de in pub/atari/Atari.

3881. What is happening to Atari stock (since October):

Newsgroup: comp.sys.atari.st
Date: 1993-12-21 06:55:57 UTC
From: klasmekj@ucunix.san.uc.edu
Message-ID: <2f66lt$jd3@ucunix.san.uc.edu>
Source record: 196357

I have gotten several requests about Atari stock so I decided to just post
publicly the daily stock dump from October 1, 1993 to today.

Compiled by month:

-- --

Daily Stock Dump

some days ago i posted the following problem:

> i need a program (tcsh-script) for ftp (i call it listdir).
> now listdir should log me automatically in an ftp site, make a listing of
> all files in the directories and subdirectoris, put them in one local file
> and finally logoff.

i was surpriesed, how many answers i got. some of the writers asked me why
i need that, because almost every ftp-site has their NEWFILES and INDEXFILES.
well, i became the moderator of the Atari archive on our school. unfortuna-
tely it runs on a novell server. i prefer working on our suns, so the only
way to access to the ftp archive is via ftp. thats why i'm writing now some
tools to create the index and news files automatically.

many thanks to everyone how replied to me, specially to:
Ate Brink, Georg Thimm, Girardin Luc, Georg Kraemer, Stampf Nicolas,
Ken Yap, Christian Masopust, Konstantinos XONIS, Robert Anisko,
Wolfgang Ley, Thomas Gusset, Richard Czech,

here also some of the solutions i got:

Try using ncftp. I know you can get a file directly from the command
line. You may be able to feed it from a script. Ask archie where
ncftp 1.6 is kept.

---
define a macro in your .netrc called 'init' (executed after connection
establishment) which does the dir command.

---
ftp can use a inline script like
```
#! bin/tcsh
ftp [ftpsite] <<END
dir * [localfilename]
bye
END
```

---
i got even some programs which creates a whatsnew-file i don't post them
here because they are to big or because i don't know if the author would
be pleased to see his program published.

To capture your session, you may want to redirect the output to a file.
Something like this:

```
ftp 128.252.135.4 > ftplog
-OR-
ftp 128.252.135.4 | tee ftplog
```

The first form should redirect everything to "ftplog" (but unfortunately not to the screen).
The second form should redirect everything to "ftplog" AND to the screen (I say should as I've had variable results on different systems, but I usually pipe my "archie" sessions to a file this way so it should work).

A complete description (incl. example) is included in the file /pub/README on ftp.tu-clausthal.de (139.174.2.10). Access via FTP, FSP (port 21) or email ("mail-server@ftp.tu-clausthal.de").

```
#! bin/tcsh

ftp -n <<ftpcmds >output
open ftp.isbiel.ch
user anonymous password petep@info.isbiel.ch
cd atari
verbose
dir sound
dir unix
dir grafik
:
:
:
quit
ftpcmds
```

These are good points, though I must admit that I would always go for
an additional bit of hardware to provide security rather than some clever
software (though clever hardware and software would be ideal) because
of the relative costs of duplicating hardware compared to software.

The answer might be to have security based around a magnetic card reader or
something similar which could provide some physical security, coupled with
some encryption/decryption software. The initial hardware would be a bit
costly but the resulting savings in `dongle' manufactuing costs might be
significant. Of course, magnetic cards are quite easy to duplicate
as it is.

The demoversion of Utopos 1.50 is at atari.archive.umich.edu, and it
is actually in two copies. One of them, uto_demo.zip, I uploaded a
long time ago. The other is utopus15.zip which seems to be the same
thing, although the length of the latter is a few bytes shorter. Great
game anyway.

3886. 6 or 12 meg STe ????

Newsgroup: comp.sys.atari.st
Date: 1993-12-21 14:10:24 UTC
From: vctec@westminster.ac.uk
Message-ID: <CIE20r.MvF@westminster.ac.uk>
Source record: 196363
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

Dear friends,

Hi again. :-)

I recently saw in a magazine.....ST Doormat...sorry ST Format (Just what David Encil from Titan Designs said...stuck with me), an advert by Marpet, the memory upgrade specialist !!! and of Forget Me Clock fame.

It said that the Xtra RAM board was now available for the STe, and required TOS2.06....support for earlier versions being available soon. And only 60 pounds for the unpopulated board. Not bad I thought, and gave them a call to find out more.....

My main query was about where the board would fit....and this was what is sad for me. It is supposed to sit on the 68000.

Now my 2.06 installed in my STe, is via a switcher board by Compo, which itself sits on the 68000. The only other expansion being for a PC emulator, which I was considering buying. Otherwise the board is a dead end for any other expansions onto the 68000.

I was told that the 2.06 would have to be socketed onto the motherboard and my 1.06 ROMs removed. Great, I thought.....the 1.06 are actually soldered onto the motherboard. and I am no genius at soldering :-(

Is anyone familiar with this board by Compo? Is there any way that I can keep the board as well as the install the Xtra RAM board? Marpet told me that they were incompatible. If so, then how would I install any PC emulator, as they require an adaptor to fit over the 68000? I can chuck the existing switcher board and go for a seperate adaptor for an emulator, but I thought that they too fit over the 68000.

What about accelerators.....don't they too fit over the 68000?

Any ideas on this topic would be helpful.

Danny.

Does anyone know what the second disk is for? I admit I haven`t gone very far in the game,but the other disk just doesn't seem to serve any purpose.

If anyone's interested, the game runs exceptionally well with the 16mhz and the data cache on the Falcon :)

Brian.

It sounds like you need to put your ST in a tower case to help expand it. call System Solutions and discuss options with them.

Hello All!

18 Dec 93 08:40, Michael Baffoni wrote to All:

MB> And of course, the reason for the additional charge: The %#@^%#$
MB> hackers who broke his encryption code forced Wolfgang to spend
MB> time making better encryption algorythms.

Ridiculous reason to increase the amount of money registered users have to pay. Now the registered users become the victims of hackers. This is no way to go.

If features would have been added (features, not bug removal, that always should come for free) which justify the increase in registration fees, I wouldn't be complaining. I don't see these in 2.40, so I think the increase isn't justified.

Greetings... - Jan -

I am interesting in buying midi software to:

Write music
Teach my children the keyboard
Drum patterns, generate sheet music, general sequencer

Nothing too fancy - I understand Tiger Cub is a good option.

Anyone out there interesting in selling theirs or know of a good place to
buy it in please respond by E-Mail if possible.

Thanks
Alex

I already have a tower case Iain.

The problem is not one of space, but of where the things go... After installing
a Xtra RAM board on top of the 68000, there is no provison of installing
anything else onto the 68000, hence no Compo TOS Switcher, PC emulator, or even
accelerator.

Danny.

>I'm amazed no-one has done this on the ST (That I've seen...)

Oh, but it _has_ been done before. And verily, such a cry of anguish and
despair arose from the people that the developers heard their plea and
discontinued the use of such torturous anti-piracy schemes lest they be
bereft of the last of their paying customers, few though they may be. :)

And this method STILL doesn't prevent multiple installations from a COPY
of the original diskette. Back to the drawing board...

|>

Ofir, would you care to expand some more? As far as I am aware the
options for extra MIDI outputs on the Atari are (1) cartridge port based
(eg Unitor, Midex, the Log3 box) (2) serial port based. Are you saying the
serial port option is better? Or has someone made a Centronics to Midi
or even DMA to Midi box? Lots of people are using Unitor out there...

Why doesn't the Midex work with Cubase Audio? And will the same be true
of Log3 and Notator Logic Audio, or is it just Steinberg's problem?

I am really interested in the issues as both myself and a friend are
considering upgrades from Notator on the ST.

Cheers

Hi netters,
Revision 3 Message -
Even more games added, ALOT have been sold
There will probably be a revision 4 but not 5.
Revision 2 Message -
Even more games get added to the list.
Revision 1 Message -
Since posting yesterday, there have been additional
revisions to this sale. First if you want to ship to
Canada, I will charge 5 dollars more for shipping.
Second, if you want COD, I will charge 5 dollars more
for shipping. Finally, new games have been added to the
top of the list and games that have been spoken for
have been removed.
Original Post Message -
I have the following games for sale. Each one sells for
5 dollars and that includes shipping in the continental
USA. There is NO warranty with these games. If you want
me to try them on my Atari STe v1.62 TOS before sending
them out, please let me know. Please be advised that if
you do ask me to check them out, I may not be able to
ship this month (Christmas is a VERY busy time for me).

Dragon's Breath
Xenon 2
Breach (no box)
Cyberball (no box)
Shanghai (no box)

It is classic Minter (ie. shoot the shit out of everything). The mouse controls your four wall guns. The left button fires a "fence" gun, to get bad guys that slip through your fields of fire. Sometimes, the mouse reverts to controlling your bouncing gun in the middle (which is computer controlled most of the time). At these times, your wall guns will disappear.

Not that I wish to critisize your program in any way (in fact, I think it's excellent), but I don't regard programs such as GEM-Bench to be very suitable as shareware. Why is that so? Well, the first time I run it was when I bought my Falcon to discover how well it compared with my older computers. The next time I ever looked at it again was when I bought NVDI and I guess it will be until I buy a hardware accelerator before I load it again. So, for a program that is maybe only going to be used once or twice ever, I'm not too willing to fork out my money compared to programs like Connect that I use almost every day. While I understand and appreciate the work that has been involved in making GEM-Bench, I really can't be bothered to go to the trouble and expense of paying a shareware fee in a foreign currency, since this will immediately bring the costs up another five pounds. I really wish there were some easier and less expensive way to handle shareware registrations!

This is not in any way intended to suggest that you shouldn't pay for shareware. I strongly advice everyone to pay for the programs they use and enjoy. Programs like GEM-Bench however, rank low on my personal priority list. I'm very sorry Ofir, but if I ever release a shareware program, I hereby promise you a free registration!

I remember seeing a PC picture viewing program that supports some Atari
formats, but I cannot remember which formats. To check, ftp to
wuarchive.wustl.edu, cd to /mirrors/msdos/graphics and get the Index (then
grep for "atari" or "SPC"). It should be in there somewhere.

3907. True Paint demo uploaded to atari.archive.umich.edu

Newsgroup: comp.sys.atari.st
Date: 1993-12-21 20:22:00 UTC
From: patrik_sanfridsson@p2.stacken.ct.se
Message-ID: <2d175d3c@p2.stacken.ct.se>
Source record: 196400

```
Filename: tp_demo.zip

Location: atari.archive.umich.edu
ftp.uni-kl.de

---------------------------------8<-------------------------------------

Demo version of True Paint
--------------------------
version 1.01 9th March 93

This version of True Paint works like the full version
except:

* there are no facilities to Save files, Palettes, Fill Patterns or Setups
* there are no animation facilities
* you can only load JPEG (JPG) and TPI (True Paint Image) files whereas the
full versions supports many file formats - see the File Formats item on
the File menu for the currently supported formats. These are disk loaded
so that the full version gives you more free RAM than this version.
* you are reminded that you are using the demo version every so often.

Note that importing JPEG files is much slower than importing other
file formats because of the high degree of compression involved.
It is also very memory intensive; particularly for large images.
Loading and Saving True Paint Image files is very quick.

Note also that use of Bezier Curves requires Font, FSM or Speedo GDOS.

If you have purchased this on disk directly from HiSoft you can
return the labelled demo disk for a .5 credit towards the purchase
price of .39-95 inc (U.K).

Note that this demonstration version is freely distributable but
that naturally the rebate is not applicable if you haven't purchased it.

TruePaint costs .39-95 inc VAT in the EC and .36 outside the EC.
Postage is free inside the U.K, please add .6 postage for other European
countries and .8 if outside Europe.

A key disk doesn't prevent multiple installations from a copy of the
original diskette? Of course not, but these installations are going
to be of naff-all use if the key-disk doesn't exist to verify the
protection!

The protection would need to be checked upon every bootup of the software.

Whilst this would be pointless with software such as Pagestream, which
is basically Hard-Drive only. Games, (Elite-II for example), would
benefit from this, as the users could install them on Hard-drive, and
due to the enhanced protection available on a key-disk, there would
be (marginally) less people able to crack it, and as the disk check
would maybe only take a couple of seconds, (give or take disk location
time). It's no *real* problem (I wouldn't mind....). And any less
number of copies benefits everyone, maybe.... As most people that
copied it would never buy it anyway, simply because they can't afford it
or be bothered to buy it, so they just copy it! But, the company might
make a couple of extra sales from those people who aren't crackers and
can't copy it..... (There's even *some* disks which can't be copied
with the Discovery-Cartridge.... without a fair bit of work....)

Hopefully this all makes sense..... :)

If I remember correctly, back in the last days of the 8-bit Atari,
games were released on bank-selected ROM cartridges. Because of the
bank-selection technique, I believe these cartridges were pretty-much
copy-proof. Could this protection be used in the ST series?

I believe the patch you're looking for is called BUTFIX (or BUTTFIX,
or maybe BFIX). Anyway you should be able to find it on A.A.

Another option is the ACC extender (I also forgot what it's called,
MAXIFILE or something???) It has the button fix built in and you
can toggle it on or off...

VIJ...

> with MiNT (when I get round to getting that sorted) ?

2M may be enough to compile small modules with gcc; 4M is much nicer
(and I've _still_ run out of memory compiling a few things). 2M
certainly won't be enough for compiling C++ code if you get into that
(and you should, even if you don't know C too well!).

2.4.5 was the last version that produced reliable 68000 code; the 2.5.x
versions are broken (they include some 68030 instructions when building
a 68000 binary... whoops!).

Hi,

With all of this talk about fax software, I am curious whether anyone has considered porting GNU fax. Strangely, I found out that this exists while reading the Ghostscript newsgroup, since GNU fax works in conjunction with GS. I downloaded the source from prep.ai.mit.edu and had a look at it. It appears that a port might be possible, although MiNT would certainly be required.

I don't have the time to try the port myself, nor do I have a fax modem. But it looks like a fun project form someone who wants some cheap fax software.

I remember a ROM cartridge for the VIC-20 which I copied (because no one would sell them :-( ). It was quite trivial. The ST is harder, but not impossible.

The main problem is cost - floppies are much cheaper to produce/duplicate.

|> day. While I understand and appreciate the work that has been involved in
I use GEMbench a lot. Everytime something new comes along to help speed up either GEM or VDI or system, whatever, I install it and run GEMBench to see what the effect is. ST Review (I think) had about 5-6 progs on this months cover disk to improve system efficiancy and it was fun juggling all the different parameters with GEMbench testing the result. For the peace of mind regarding system tuning, I'd say it's worth it.

3935. Got an RLL HD--now need controller, Host Adaptor, specs!

Newsgroup: comp.sys.atari.st
Date: 1993-12-22 10:34:49 UTC
From: metalhed@kaiwan.com
Message-ID: <CIFMq1.F3G@kaiwan.com>
Source record: 196314
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

The Odyssey continues...

Picked up an RLL HD--70 megs after factory-bad sectors, $50 US, pretty good deal. What I need now is this...

What host adaptor and controller should I get? I have heard ICD's host and Adaptec controllers are best, but I'd like options...

Where can I get them, and for how much? Used is FINE, I need *cheap*, hoping to get controller/host adaptor/software/power supply for under $100 total.

Plus, I assume that some of the software will be loaded into RAM--I'm still on a 520ST, and don't want to sink money into any RAM upgrades that I can't take with me to my Falcon (which I should be getting next year some time)...

Also, will need the specs on the drive I have--cyl, heads, sectors/track, et al... Here's the make/model:

Fujitsu Limited drive, 86 megabytes.

Part #B03B-4805-B003A#NT
Serial #209224
Revision #B9

On the side is what looks like a UPC bar code, with the #001350 209224

If anyone has the specs for this drive so I can format it and check it out, I'd appreciate it, or the # for Fujitsu so I can call them and find out.

Lastly, I'm assuming that I can plug the controller and drive into the Falcon's SCSI-2 port, correct? This is important, so that I can take the drive(s) with me when I move up...

Thanks!

dc25@cornell.edu (Dan Coleman) writes:
#
#I've been trying to transfer files off my ancient Atari 520st to a MacSE
#via MSDOS. Because the 3.5" 360k drives on my ST won't read an MS-DOS
#formatted 720k disk, I can't start the process. Does anyone know how I can
#get MS-DOS to
#
1) format a 3.5" disk single-sidedly? or
2) read single-sided atari disks?

franks@hpuamsa.neth.hp.com (Frank Slootweg at CRC) writes:
#
#> ...I found out, that just modifying
#> byte #22 (the media descriptor) from $F8 to $F9 did the job!! ...
#
Note that the "I" was not me, so I am only passing on what someone
#told me. I have no real experience with this.

The "I" was me. And I still use this trick to transfer files between an
MSX (3.5" SSDD) and a 386 (3.5" DSHD). On my MSX, diskettes are formatted
with media descriptor byte 0xF8, but MSdos 3.3 and above don't recognise
them properly. If I set it to 0xF9 (the "default" value (for 720k and 1.44M
diskettes (?))), it works well on both MSX and PC.

If you want to format SSDD disks on your PC, you can use fdformat (look
for FDFORM18.ZIP at SimTel). But beware: if you have a HD (1.44) drive,
DD (360/72) formatted diskettes (either HD or DD!) cannot be reliably
used in a DD drive. Formatting at DD must always be done in a DD drive!

mcovingt@aisun3.ai.uga.edu (Michael Covington) writes:
#
#DOS should read single-sided disks with no trouble. I used to do it all
#the time in DOS 2.1 days...

Unfortunately, MSdos does not support SS disks any more since 3.2...

#To format a disk under DOS as single-sided, use the single-sided option
#(I think it's "/1").

Some versions of MSdos' FORMAT command indeed have the /1 switch. But if
you try it, you get a message like "Drive does not support this".
Just like "FORMAT /T:80 /N:18" in a DD drive won't give you a HD diskette ;-)

Dear Netters,

Here's wishing you all the best in the festive season, and for the coming New Year.

Christmas means different things to different people.....presents for some..... religion for others.......and party time for the rest.

I am not a Christian, but do believe in God. As this is a celebration for the birth of Jesus, I too celebrate Christmas. I believe that all the religions teach the same thing, and so there should be no difference between people of different religions.

Basically, all religious teachings come from the one great power, so all religions must be the same....just preach it differently.

So, let's celebrate Christmas, with love and goodwill for one another.

Peace.

Danny.

I got the dialer to work. It was because of my stupidity! :) It works fine. The only complaint I have, is that all BOLD items on the VT emulation blink!! This is very annoying. It still doesn't emulate the lines, but that can be ignored. The blinking can't!
Connect is a very nive program. I just want a perfect one! :)
Connect is a blessing to the Atari platform, keep it up!!!!

3949. Falcon as a Speccy :-)

Newsgroup: comp.sys.atari.st
Date: 1993-12-22 14:27:37 UTC
From: roymcp@garbo.uwasa.fi
Message-ID: <1993Dec22.142737.6734@uwasa.fi>
Source record: 196325

Seeing as the Falcon has a built in microphone socket, have any of the programmers of the 8 bit machine emulators (like the Spectrum one, or the C64 emulator) considered updating their software to take account of this feature? Being able to load a game like "Monty on the Run" on the Falcon from the original cassette may not be the cutting edge of game playing technology, but I for one would find it an amusing scenario! :-)

Keep smilin'

Wrong I'm afraid. HD disks have a different coating with different magnetic
properties. Most modern floppy drives can generate enough flux to use an HD disk
at 720K but an older drive may well have problems ie work intermitently, get
read errors etc.

Steinberg have made a centronics to MIDI interface. The old model is
called SMP24 and the new one SMP2. Both are extremely reliable, provide 4
MIDI outs and 2 mergable inputs and of course sync via MTC.

I wouldn't trust the serial port for more than one, maybe 2 midi outputs.
According to Steinberg there is not enough CPU bandwidth to drive the
extra MIDI ports on the MIDEX while handling audio. Some hardware wizards
around here will probably be able to shed some more light on this.

Try it, and find out, I'd say...

5.25"HD has 80 tracks, while 5.25"DD has only 40 tracks.
So the tracks are closer together, needing a narrower head. When
formatting a DD disk in a HD drive, only half the width of the track is
covered by the head, which leaves plenty of noise for a DD head. So, you
are correct about the 5.25" part of the story.

3.5"HD has 18 sectors/track, while 3.5"DD has only 9 sectors/track.
So the sectors are closer together, needing a shorter head. When
formatting a DD disk in a HD drive, only half the length of the sector is
covered by the head, which leaves plenty of noise for a DD head. So, you
are wrong about the 3.5" part of the story.

(I don't know whether my statements are completely right either; but one
thing I know for sure: formatting a 3.5" diskette at DD in a HD drive,
sometimes results in a COMPLETELY UNREADABLE diskette for a DD drive!)

Marcel.

3954. ICD ADSCSI Question (UK)

Newsgroup: comp.sys.atari.st
Date: 1993-12-22 16:05:18 UTC
From: cf580@city.ac.uk
Message-ID: <1993Dec22.160518.28790@city.ac.uk>
Source record: 196330

Hi all. I've got a hard drive based around an ICD interface which I bought from a friend, sans manual. He's now moved, so I don't have his phone number, and I'm suddenly getting an awful lot of sense errors; readin, writing etc. and I guess the drive is finally going down the tubes.
The problem? Well, without a manual, I don't have a clue as to how to add another drive to the interface. Space isn't a problem; it's all in a tower case. So, could some kind soul lend or photocopy me their ADSCSI interface manual? (Yes, I realise it's questionably legal, but I can't see why it'd be any use without the board itself)
I'm living in London, BTW.
E-mail rather than post, preferably, since the university is closing for the next fortnight and any messages will expire before I read them.

TIA -

Tim Wright - T.J.Wright@city.ac.uk

I realise this, which is why the shareware fee is so low.

If you want, send me your own currency. 15DM or $10 or whatever your
currency is. I'll use it to pay for shareware that comes from your
country.

BZZZT! Wrong answer! He was asking if there is an Atari emulator for the Macintosh, NOT if there is a Mac emulator for the Atari.

To answer the question; to the best of my knowledge there is no emulator on the macintosh to emulate an Atari. However, if you have a PC, there is a very nice hardware/software emulator by Darek Mihoka (creater of the 8-bit emulator for the ST) call the Gemulator. (It works quite well)

Cover the hole on the disk and the drive will assume 720K density and it
works just fine.

3959. GCC >=2.5.7 not for 68000 ST�s ?????

Newsgroup: comp.sys.atari.st
Date: 1993-12-22 16:29:52 UTC
From: gc85@hrz.uni-giessen.de
Message-ID: <CIG35t.7EL@muster.hrz.uni-giessen.de>
Source record: 196331

Hi all
I have heard some roumors saying that from GCC 2.5.7 the 68000
is no longer supported, and that there are plans to drop the 68k
out of the GCC.

Any comments in that roumor ???

I hope it is just a roumor !!!

When is a new "as bugfree as possible" GCC-release for the ST even
with a 68000 inside expected ??

Troy Carpenter (psurge@cs.utexas.edu) wrote:
: I am moving in the next few days and I need a good utility to back up my
: hard disks before I transport them. I have a Mega4 STe with a high density
: floppy drive. Are there any backup utilities that will use the high density
: disks? Most of the ones I have tried seem to have a hang up somewhere along
: the line or assume the disk is a certain size. Elfback seems nice but it
: always tells me I don't have enough memory for the ram disk (even though I
: still have over 3 megs free), uses the hard disk, then fails to copy the LZH
: file over to the disk.

I tried several "freely" (in quotes because of shareware) available
backup programs for backing up my TT's harddisk, but none of them
works satisfactory. Here is a summary:

1. BACKUP (or STBACKUP):

- does not run on a TT, no matter what flags are set or not.

2. The VAULT:

- Works, but copies files one-to-one, i.e. there is no compression
you need at least size_of_harddisk / 1.44 MB HD-disks for a complete
backup.

3. Elfback:

- Doesn't work with a ram disk, even if it occupies the whole
memory.
- Needs LHARC which + slows down backup speed considerably when
there are a lot of small files on a partition
+ often leads to failure of the backup process
due to LHARC error messages
- LHARC archives are not removed after having been copied
to a floppy disk

Summary: There seems to be no useful backup program available on the net.

Paul Civati (Paul.Civati@mettav.royle.org) wrote:
> What exactly is RTF (I know what it stands for), and how does it differ from
> ASCII?

Rich Text Format. I believe it is an attempt at a standard way for document processing programs to export a file in such a way as to be imported elsewhere with a significant portion of the special formatting information (indentation, fonts, boldface and other text effects, etc.) preserved. Thus, it is mostly a text format, with agreed upon codes for various textual effects. Take a peek at a Microsoft Word manual for a more detailed explination (they are holding the doors of America open, and should be easy to find).

This is not a bad idea, but more folks will have to use RTF for it to fly. Also, it is not clear to me that RTF provides enough flexibility to allow transparent importation of files. I have always had to dink with things after they have been through an RTF ex/import (i.e. fix up spacing, choose better fonts in the new program, fix footnotes, etc.). On the other hand, it certainly does save a lot of work over importing as plain ASCII and having to add all the textual stuff in.

Is there a Public-Domain/Share-ware CV (Curriculum Vitae) creator for the ST? In English, and preferably runs in color....

I didn't do CV's at college.... Another year of typing would have driven me mad. (3-years in a row is bad enough of copying bits of paper onto other bits of paper... :) And CV's were part of the years course after I stopped taking typing, and I don't have any charts of layouts etc. (I want something that looks professional!)

I couldn't spot one on atari-archive, but there's plenty of other sites I haven't looked at.....

>Beta-Carotene* 25,000 IU
Ca> (*not vitamin A)

Ca> Okay, my Multi Vitamin says this:
Ca> Vitamin A (Acetate & Beta Carotene) 5,000 IU

Ca> What does *that* mean?

Beta-carotene is a precursor of vitamin A, the body can readily convert it to vitamin A. Active vitamin A is found in fish oils, eggs, and milk and Beta-carotene is found in vegetables (carrots, cantalope, etc.). The benefits of Beta-carotene are:

-it is non-toxic at even high doses. You can take so much of it that your skin turns orange with no known harm (this has happened to me when overdoing it with carrots and a juicer). Vitamin A is not so forgiving.

-Not only can Beta-carotene be converted into vitamin A as needed, in its own form it serves as an anti-oxidant.

I've found beta-carotene to be good for acne related problems. There is a (prescription) form of active vitamin A that was designed specifically so that users could take elevated amounts (in the 100,000 range, something you would be a fool to do with regular vitamin A). I tried Beta-carotene at elevated levels (again, in the 100,000 range), and found it works quite well with no side effects.

Vitamin A Acetate is, *I believe*, a water soluble form of vitamin A, which is normally fat soluble.

Vitamin A (whether converted from Beta-carotene or in active form) is used primarily in the body's epithelial tissues. These are the "lining" tissues in the body: the linings of the genitourinary tracts, the mucous membranes etc. The most common noticed deficiency is impaired night vision.

Well I have a few dozen votes for the Top 10 of 1993. But I really still need more time is ticking away.

At the moment it is more of a top 5 list, so come on and help me out.

Send the following about your favorite Atari games/applications.

Title
commercial/PD/shareware status
author (if you know who)
type of program (application, game, midi etc...)
why you like it (Not necessary but would be nice)

Please contribute and brow beat your friends ;)

Thanks for your time,

Dan Ackerman

>but was more or less told to get lost and wait till October..

>But I am still waiting...!!

>You see I live in New Zealand, we don't count...!!!

>But think again Gribnif, my money counts..!!

>No wonder people are droping Atari by Storm, with support like this....

>Roger.............. sheppard_r@kosmos.wcc.govt.nz

>This is so simple, no Atari support = no Atari..........

Sheesh! Relax Rog. GENEVA comes with an upgrade patch to bring Neodesk
to v.3.04 so it works with *GENEVA*. If you don't have GENEVA, you don't
need the upgrade. If you buy GENEVA you GET the upgrade.

Gribnif support is excellent, and their products are top notch. Get the
facts before you get excited, ok?

3977. Re: 520st to Mac file transfer

RTF is 'Richfield Text Format' and is a pretty standard text transfer
form. Most PC word-processors support it. 'Word' does for starters,
(Which is actually probably the closest thing to a decent word-processor
on the IBM-clone's!).

Basically, it's just an alternative save method, which has become a
'standard' for text transferral between platforms & applications, which
will let you use most of the formatting etc. from whatever you type the
file into, on whatever machine you import the RTF file into!

3985. MSDOS BACKUP command ...

Newsgroup: comp.sys.atari.st
Date: 1993-12-23 10:25:20 UTC
From: c2sgy@dmu.ac.uk
Message-ID: <1993Dec23.102520.27894@dmu.ac.uk>
Source record: 196263

Is there a little program that will unpack a disk which has been backed up on a PC using the BACKUP command.
Basically it uses all floppy disk space for saving all the necessary files and then when you unback the disk it will copy it back onto your hard disk in the same configuration.

The only way to download software is via a PC so backing up the directory and then unbacking it to my hard disk at home would save enormous amounts of time.

Any ideas ???

Marcel Wijkstra (AIO) (wijkstra@fwi.uva.nl) wrote:
: ps@ocisgi7 () writes:

: #This is true for 5" drives, and definitly false for 3" ones. The difference
: #is simple: 5" HD drives have tracks twice as small as DD drives do, while
: #both types of 3" drives have the same track width.

: Try it, and find out, I'd say...

I would not say it unless I tried it, or would I?

: 3.5"HD has 18 sectors/track, while 3.5"DD has only 9 sectors/track.
: So the sectors are closer together, needing a shorter head. When
: formatting a DD disk in a HD drive, only half the length of the sector is
: covered by the head, which leaves plenty of noise for a DD head. So, you
: are wrong about the 3.5" part of the story.

I am sorry, but this statement is a sad misconception. DD disks are written
by PC floppy disk controller (FDC) at the bit rate of 250,000bps (not 250K
bps!). HD disks are written at the bit rate of 500,000bps, so that each
sector occupies two times less than DD one. This could lead to read errors
if you are trying to connect DD _drive_ to HD controller and drive jams
high-frequency recording on HD disk to much, but this is absolutely irrelevant
for our particular problem, because _width_ of drive head is exactly the same
for 3"DD and 5"HD drives. You are probably not aware of the fact, but FDC
always record the _whole_ track during format operation, IAMs, GAPs, AMs,
data fiels and all. Therefore, recording along the track length is always
continous and can't leave any significant noise as long as recording signal
meets specification of magnetic coating (which it does) and width of read
head is the same on all drives (which is true).

: (I don't know whether my statements are completely right either; but one
: thing I know for sure: formatting a 3.5" diskette at DD in a HD drive,
: sometimes results in a COMPLETELY UNREADABLE diskette for a DD drive!)

Oh, it IS true, but due to a diffirent reason: In it's infinite wisdom,
IBM hardwired HD-media sense signal into AT FDC bit rate select login, so
that it will refuse to select a 250,000bps bit rate with HD media inserted
and 500,000bps with DD media. (Let me note that, curiously enough, it will
not refuse to select 125,000bps and 300,000bps rates on any of media types,
although these are even more alien for 3" disks). So, probably, your controller
just silently formatted your disk at the 500,000bps data rate with 9 sectors
per track, giving it the appearance of DD one, but making it unreadable in
by DD controllers anyway. Just make sure you always use the correct media, and
all your drives are properly adjusted, and you'll be fine with 3" DD disks

written in 3" HD drives...

Cheese,

/Serge.P

No idea what's causing the problem. Are you using the latest versions?
NVDI and Overscan are fully compatible although one has to be run before
the other (I forget now). Stalker is res-independant anyway.

I've heard that too, but I think the next FreeZe will be version 2.30
and not 3.0. Aaron has said that he doesn't have enough time to
provide users with proper support, so he has arranged for Atari United
to handle the support side of things while he does the programming.

Having posted five messages on various topics lately with 0 responses, I'm beginning to wonder whether they're only *seeming* to get out, or whether their content is too esoteric (or stupid) to be worth a reply.

As an attempt to quell my paranoia, here's a fairly straightforward request:
The GNU gas assembler says that it accepts Motorola syntax as well as MIT syntax and, in most cases, seems to do so. However, the statement

movel (a0)+, (a1)+

gives two instances of the error, "Missing operand value assumed absolute zero."

What is it trying to tell me, and what is the correct way to do address register post-increment?

(Using Motorola operator syntax, "move.l," gets me "Unknown operator...statement ignored.")

3999. Atari's Stock--Plunge in $$ revealed...

Newsgroup: comp.sys.atari.st
Date: 1993-12-23 17:08:57 UTC
From: x91mikowski@gw.wmich.edu
Message-ID: <1993Dec23.120857.13650@gw.wmich.edu>
Source record: 196280

Hi,

A few folks were wondering why Atari's stock has plummeted in recent weeks, so I thought I'd shed some light on the subject with a few facts.

1. An anaylst on CNBC made the comments that "Atari stock is overvalued at $10/share, and should fall to ~$4.50 in a few months."

2. The next day, options trading opens on ATC for the AMEX which allows one to "bet" on the future price of ATC stock at $5, $10 and $15. That analyst probably bought quite a few options at $5 for herself and her clients and probably had prior knowledge of that announcement. In this type of trading a much larger margin can be made on a small move towards your option price.

Later,
Bernard

4000. How to deinstall Minix filesystem?

Newsgroup: comp.sys.atari.st
Date: 1993-12-23 17:56:40 UTC
From: jules@cs.ruu.nl
Message-ID: <CII1uG.7Iw@cs.ruu.nl>
Source record: 196281

Recently I installed the Minix filesystem which comes with MiNT on a partition of my hard disk, just to try it. I decided that I don't want to keep it, but how do I get back to the regular filesystem without having to format the *whole* harddisk? I tried zeroing the partition and it seemed to work, but now 1.5 MB are used although the partition is completely empty?!

Thanks in advance,

-- Jules

4002. High resolution color for the ST?

Newsgroup: comp.sys.atari.st
Date: 1993-12-23 19:13:27 UTC
From: PETERS@bdt.COM
Message-ID: <CII5EF.JDr@bdt.com>
Source record: 196282

Wouldn't it be great to be able to hook up a high resolution color monitor to your ST (that includes monochrome, of course)? Is there just no economical way to do this? There must be a few other ST owners out there besides me who would shell out a few bills for the hardware----as demonstrated by our delight in being able to upgrade TOS, RAM capacity, etc. (so that our beloved software [like Pagestream, etc] runs even better!]

4003. Re: GCC >=2.5.7 not for 68000 ST�s ?????

I've heard a similar rumour. Sounds like the Free Software Foundation's
been bitten by the Microsoft Bug -> upgrade or forget about it.

> When is a new "as bugfree as possible" GCC-release for the ST even
> with a 68000 inside expected ??

Well, 2.4.5 works pretty well, even for C++ programming...

IIRC the demo version runs fine on the falcon, not sure if there ever will be a
full version, the demo was released ages ago and nothing AFAIK has been heard
about it
since.

Atari United will be carrying version 2.30 of Freeze Dried Terminal,
Aaron Hopkins is working on version 3.0 as we speak, and hopefully early
next year he will have it done. I will post further info about this
as I hear it. If you want to talk to Atari United directly, just
send mail to me (My wife is the co-founder) or to BIBLINSKI@DELPHI.COM

I hope this helps.

Format a disk on the PC:/

FORMAT /F:720 A:

(Replace A: whatever drive has a 3.25-inch drive attached).

This will format a disk readable by the PC, and the Atari, which you can
then copy any files from the ST onto, and then read them with the PC.
Saving the files as plain ASCII should make them importable into most
PC word-processors etc. (Some are fussy about certain characters such
as line-feeds/carriage returns being omitted etc.)

I have a French ST mag from a couple of years back which details such an emulator. It never surfaced in the UK and I really don't know if it was anything more than vapourware. The screen pics were convincing though, but my French wasn't up to it ;-)

I'll see if I can dig it out.

Roland.

Ps. This is my first USENET message - and if it works I'll be amazed! :-)

>get MS-DOS to

> 1) format a 3.5" disk single-sidedly? or
> 2) read single-sided atari disks?

In config.sys, use DRIVER.SYS to define a 3.5 single-sided drive:

device=driver.sys /d:0 /h:1

This defines the first physical drive as *also* being a new drive (the letter
will be after all drives defined/found previously) that is 360k 80 track,
single sided. Format disks on that drive and the ST will read write them with
no problem.

There's also a program floating around that'll let you make the ST format
disks so the PC can read them, and another that "corrects" the formatting
using the PC, but I find this approach the simplest.

Obviously, if your 3.5 drive is B:, then you change the /d:0 to /d:1.

Won't work. The earlier version of the Atari OS did something weird
with the location of the first sector. They could read amd write disks
formatted on PCs but not the other way around.

/1 only works on 5.25" drives. You have to define a single-sided 3.5"
drive with driver.sys to make the kind of disks he needs.

Here at work there are lots of dongles for programs, namely programs such as AutoCad, etc. They seem to daisy-chain together quite well, I know of one guy who has 3 dongles all linked together quite happily, and I think he can still even use his printer!

Anyway, even if a dongle is used, way back in the late '80s when there were one or two dongles for atari software, I did see some software which had the dongle check hacked out of it ....

This reminds me of a humorous experience I had while wearing my sysadmin hat. We had a visiting Japanese scholar who had brought with him a box of floppies containing a book he had written. His entire visit revolved around the files contained on those floppies, so imagine his dismay when none of them could be read in any PC tried (which was many). Finally, I am consulted. This poor Japanese guy, surrounded by various faculty members who were hosting him, explains his problem and asks if I can help. Feeling lucky, I nonchalantly grabbed a roll of electrician's tape, taped over the HD detect hole on one of the disks, and stuck it in the drive (getting some very funny looks in the process). Bingo, it read fine! I thought the guy was going to faint, he was so happy :-).

Of course, his problem was that he purchased a box of DSHD disks, but his PC had an old DSDD drive. The drive cheerfully ignored the HD detect hole and formatted them DSDD. However, when stuck in a HD drive, the HD detect hole (in conjunction with braindead MSDOS) would not allow the disks to be read.

Stacey,

Aaron has v2.30 in alpha test now, and should have it beta testing after Christmas. ATARI UNITED! will be handling all upgrades and new registrations, as well as doing some ongoing support via a bimonthly newsletter. Watch for our announcement when v2.30 is ready for public consumption.

(He's also working on v3.0... Which could be rather amazing, if he manages to do all the things he's thinking about.)

4024. Is there still a binaries newsgroup??

Newsgroup: comp.sys.atari.st
Date: 1993-12-24 04:26:14 UTC
From: crubel@encore.com
Message-ID: <CIIuzs.9zK@encore.com>
Source record: 196202

Hi all-- and Happy Holidays,

Just wondering if there is still an Atari binaries
newsgroup, I haven't received any new listings in quite awhile
and well who knows if this old computer is working right or not.
Anyhow I'ld sure like to know, and I'ld also like to know
the best FTP site(s) for the ST.
Thanks in advance for the info. I've been out of touch with
the atari for awhile and am getting back into it again.

The comp.binaries.atari.st and comp.sources.atari.st are still there, and
are currently moderated by Steven Grimm. Mainly due to the popularity
of ftp archives (good ones are atari.archive.umich.edu,
src.doc.ic.ac.uk, ftp.uni-muenster.de and ftp.cs.ruu.nl and many
more), little is contributed to these groups.

Steven and I have been talking about transferring the moderatorship for
the groups. If everything goes well, I will start working on the groups
soon. Steven maintained an archive with all the binaries and sources posted
on the groups; those will probably go away.

I will investigate the possibilities to extend the purposes of the
groups to make them more useful. As most people have ftp access
nowadays, it should be useful if there is a newsgroup with
announcements of what new things are posted to the ftp archives, in a
consistent format, with a good description of what (binaries, sources
as a main distinguishing feature) is in the archive. A good example of
a well-documented ftp site is sol.cs.ruu.nl. In the INDEX file at this
archive, the files are classified using a system of letter codes.

I hope the archive maintainers will not mind my showing a short extract:

lhxarc.zoo 910705 de Unpack LHARC files. V1.04
pfx.zoo 901212 de LHARC compatible executable shrinker
stzip.tos 931202 de c PKZip archiver clone, V2.3
unarj.zoo 930119 des Unpacker for arj files, V2.30
unlzh.arc 900227 de Extract files from LHARC archive. V1.4
^^^^
where
d: documents included
e: contains executable
s: contains sources
c: software was checked and works at first view

I shall certainly include more detailed information, such as on what
computers it works, how much memory is required, etcetera. It should

be noted that the binaries and sources groups already follow a similar convention.

I would appreciate your thoughts about this issue; I should like to use the groups for both binaries/sources themselves and announcements, but still with the distinction between binaries and sources. There should also be regular postings containing descriptions of the archives and what can be found where. I shall also contact the maintainers of current ftp archives about proper communication of new uploads. For example, the file 'how.to.upload' at atari.archive could contain the urgent suggestion that after uploading, an announcement is sent to the maintainer of the proper group (comp.sources.atari.st or comp.binaries.atari.st).

Currently, the maintainer is koreth@hyperion.com. Sources should be sent to atari-sources@spud.hyperion.com, binaries to atari-binaries@spud.hyperion.com. In the near future, this will probably be changed to avg@cwi.nl for all purposes. More information will soon be posted on the relevant groups.

Comments and suggestions are welcome. (mail or post on comp.sys.atari.st).

NVDI is res-independant. The drivers are for number of planes in use. It
has drivers for 1,2,4,8 and 16 bit displays. Warp 9 does not run in 16 bit
colour and is very slow at anything other than monochrome compared to NVDI.

Bare nonsense. There's several really cheap modems with Rockwell 144DP-21 chipset, they all work fine. I'm using two of them at work, an external one for data and a DOS internal one for FAXing. Both work flawlessly, and so does my private Supra V.32bis.

Source record: 196220

Don't bother with cables. There is a PD program that will allow booting
from drive-B. (Looks at a.a index.....)

Hmmm... can't see the program on atari.archive, but there IS a program
that will put a boot-sector on drive a, to tell the computer to boot
from drive B: (re-reads boot sector etc.). I'm sure someone will
know the program I talking about & where it is....

If all else fails. 'DC-Bootit' will let you boot from alternate drives,
and will also let you boot with different seek-rates, and hertz-rates.
(It needs to be loaded from GEM however!)

DC-Bootit is on atari.archive.umich.edu in the atari/Utilities/Dc/
directory. dcbootit.???

I hope that's of some use!

The ST game "Bolo" is not the same as the Mac game Bolo; the ST game is
actually a really cool Breakout/Arkanoid clone which I highly recommend,
although it has nothing to do with the Mac game of the same name. If I
remember correctly, there is a bug that crashes the game at the very end
(after 25 screens or so), but other than that, it is a very fun game...

Waddaya mean Atari is dead? Timex Sinclari, now that's dead!!!! IBM 360 -
now that's dead (except for JCL, a long-living-never-ever-ever-ever-ever-die
cancer that is infecting the world, as we talk!!!) TI 99 is dead too (anyone
want to buy one cheap? I got one at a yard sale for $2! I also got a
Timex Sinclair, which I worship :-) plus a few manuals, sitting in a
box - I am the proud director of a computer graveyard!) My Atari gives me
much amusement that I don't find on the serious computers I use at work.
Also, it saves me much $$ on arcade games, since the Atari games blow away

most arcade games!!! Jack - you just don't appreciate 1985 technology -
you are getting bowled over by "Intel Inside" and Unix!! Let's face it -
Atari always was the best - you can still find their 2600 machines littering
flea markets from here to jessup, Md. I love my "jackiontosh" and will
use it until it can't be fixed by anyone or anyplace and until every
Atari dealer in the D.C. area closes down - then I will go mail order and
travel around the U.S. looking for Atari Sts lying in some beat up
box at a Ham Fest, in Finley, Ohio, looking for a kind owner to nurture and
care for this great being!!!!! You have to keep up the faith of Atari in
this season of Hanukah and Xmas!!!! Happy Holidays and New Year, ye
faithful Atarians!!! Never give up the hope - someday, Star Raiders will
come out in a Virtual Reality version, like Lawn Mower Man

----- Mike Winters

From: craig@yonder.equinox.gen.nz
Message-ID: <H.eg.Z6LAvlZVWgc@yonder.equinox.gen.nz>
Source record: 196227

In <CIInM0.DFB@world.std.com>, Yat W Siu writes:
>To my knowledge these programs support Fax:
>
>Straight Fax, QFax, QFax Pro and soon Connect 2.50..

Does anyone have any ideas where I could get more info on these,
and where I could mail order it on credit card from? (anywhere in
the world).

I've got a G3 Faxmodem, but no software for it. I think my chances
of finding some in this country will probably be something close
to nothing :-(

Craig.

If you are able to start your computer with GEM you can use dcbootit.
If you have a working a-drive you may want to use b_boot (boots from a
(only the bootsector, no AUTO-folder/Accs etc), makes all settings to
boot from B: and resets -> booting from B:).

Both are available on ftp.tu-clausthal.de (139.174.2.10)
/pub/atari/systools/boot/*. Access via FTP, FSP (port 21) or email
("mail-server@ftp.tu-clausthal.de").

Bye,
Wolfgang.

Just get a new 50-way cable with 3 50-pins SCSI connectors on it...

To add more SCSI-HD's on the 50-way-ribboncable get a third 50-pin connector
and add it to the cable (If it's long enough!) just like the two old ones!!!

Then just change the SCSI-ID on one of the HD to be something else from the
first HD's address....

There is a slip implementation called 'ka9q'. It supports serial and midi
connections. It is available from ftp.tu-clausthal.de (139.174.2.10)
/pub/atari/telecomm/tcpip/*. Access via FTP, FSP (port 21) and email
("mail-server@ftp.tu-clausthal.de").

Try kaq9. It is in a file called STICP.LZH on ftp.tu-clausthal.de.
Unfortunately, I don't know the exact path to the file.
Maybe there are newer versions, but I don't know about that...
Hope this helps.

The author of Transendence BBS informed me of this several months back. Why you would want to is another matter. Seems much simplier to just purchase a larger drive. A tape or CD ROM comes to mind,

I can't afford a laser (or should I wait until I can?), but I need something better than my Panasonic 2123 24-pin. I'm using Atari Works, Notator SL, Pagestream 2.1, and Calamus SL.

I see Desk Jets and Bubble Jets by Cannon, HP, and others for around $300. Is any one of these particularly good/bad with the above software on a 4-meg 1040STf?

Thanks for your opinion!

4060. MiNT 1.04

>>720k or 1.44 meg. One of the other switches alows a second SCSI drive
>>from the internal HA.
> Tell me more - This sounds interesting.... I thought the SCSI interface
>only could handle one SCSI device ? And I could have need for one
>more (CD-ROM or streamer)

This is nonsense, of course. The Mega STE internal host adaptor can handle
ONE SCSI device, no more. No DIP switch, neither on the HA, nor on the
Mega STE, can change this behaviour.

4063. Re: TC screen grabber & QWK reader

Newsgroup: comp.sys.atari.st

There are a lot of Falcon Video Digitizers out there that can handle True Color or Falcon True Color (that is different <grin>).

Wizztronics will soon have theirs finished and I think Titan Designs are also making one (not sure).

But otherwise there is the MatDIGI from Matrix, Screeneye, Videomaster? or at least another one from Microdeal, and a JRI Grabber.

That's all I can think off the top of my head.

Cheers

Did some year-end cleaning and I need to get rid of some of this stuff.
If you are interested in any of this stuff please reply via e-mail
(and any REASONABLE offers will be considered).

Misc. stuff:
Epson Action Printer 3250 24 pin printer w/tractor feed add-on $135.
Silver Reed 87EP Elec Typewriter w/parallel interface $60.
Atari (orig) joystick $3.
GE 13" Color TV, NOT cable-ready. Nice picture. $70.
Sega Genesis. Old model with headphone jack and volume control. Comes
with
one controller, box, etc. (everything except the RF box) $65.
Sega games: Chakan $10. Lightning Force $10.
Lots of Sega Mags-free if you buy the machine
Z-Nix Super Mouse II PS/2 mouse $7.

IBM games/programs:
GEM desktop and GEM graph. 5 1/4" disks. $7.
IBM OS/2 2.0 manuals (NO DISKS-you can order them for $69 w/the form)
$5.
Seven Cities Of Gold-commerative edition. $15.
Lemmings. $15.
Indianpolis 500. $10.
Command Adventures:Starship $25.

Atari ST stuff:
Magic Sac Mac emulator cart "complete" $40.
Supercharger IBM XT emulator box w/power supply $100.
Timeworks Publisher v.1 $35.
VIP Professional Spreadsheet $25.
MultiGem Plus w/utils v.1 (doesn't work on STE) $20.
Populus (doesn't work on STE) $15.
Kult $5.
World Class LeaderBoard Golf $5.

Buyer pays shipping and COD (unless pre-paid). All software is
original and comes with orig manuals, but no boxes (I threw 'em
away). No manual for the Supercharger, but lots of text files on
disk, incl info d/led from GEnie.

MAY be interested in trades...If interested please leave e-mail.

Dan,

Thanks for asking!

Here are the reasons that I got into, and stay with, Atari:
(all commercial)

Emagic (ex-C Lab) Notator
This midi seqencer features score printing and layout as
well as timecode features. Powerful and it will 'get
funky!' In professional full-time use, I have not found
any limitations to its use.
Supports virtual multi-tasking, allowing me to use
Notator and the following apps (virtually)
simultaneously!

Steinberg/Jones Avalon
This is a sample editor for the Atari. It supports all
the samplers I need, has easy and fast editing and more
features than I need (and they still don't get in my
way!)

Doctor T's X-oR
A 'one-size-fits-all' synth editor, X-oR uses 'profiles'
of MANY different midi devices and allows editing and
librarian functions for all. Client walks in with
synth, midi reverb (whatever), I dial up the profile and
we customize some sounds. Voila!

DrumKitz by Kevin Houser, PG Music
DrumKitz is a software sysex editor for the Alesis D4
drum module. It allows full control over sounds and
drumsets and allows me to save set-ups specific to a
song or a whole project. _Literally_ saves HOURS of
D4 tweaking. (PG Music is responsible for
Band-In-A-Box, a very popular interactive/sequencer for
Atari, and Kevin now works with/for PG.)

Sort-of-dishonorable-mention....
I don't use FreezeDriedTerminal much anymore, but I love the
program even tho Aaron Hopkins, the author, kept the
shareware $$ I sent him and would never send me a KEY for
the program. Blatant larceny by the author doesn't keep
FZDT from being a brilliant telecom tool and fun to use
...just watch your wallet around this guy.

4067. LATIN1 Code Set to Complete a Flash TRN file

Newsgroup: comp.sys.atari.st
Date: 1993-12-26 15:45:36 UTC
From: aa515@FreeNet.Carleton.CA
Message-ID: <CInFs0.96s@freenet.carleton.ca>
Source record: 196249

I have completed a partial TRN so that Latin1 codes translate into
or display correctly. I was wondering if someone had a list of the
complete Latin1 set so I that might be able to finish the task.

I'm using an older version of Flash as a comm program.

Please E-mail. Thanks

>Don

>P.S. ===> If answering by email please use: donm@ucon.gun.de

I use Captain Qwick and MaxiMiser. There are others, but these two seem to work the best for me. They should be available in the usual archives. Let me know if you can't find them.

Neither of these is totally satisfying--I think this is one area where a shareware developer could make a few bucks with a "better mousetrap." I'd love to see a QWK reader that was completely Geneva compatible (ie. MultiTos- GEM-legal), and that could handle Blue Wave packets.

Never heard of the modem, that's why I haven't got an opinion about it.

I run a *VERY* big BBS, with users from more than 20 countries, and the ONLY modems having problems connecting to my BBS are modems that use the Rockwell chipset - and I'm not the only one with this experience.

Sorry, but you're wrong! Overscan and NVDI work fine together, as long
as you're using "Autoswitch Overscan" and load NVDI before Overscan is
installed.

4074. Wanted: Atari ST BASIC compiler, math software, small SCSI drive

Newsgroup: comp.sys.atari.st
Date: 1993-12-27 02:56:08 UTC
From: ocia@tekig5.pen.tek.com
Message-ID: <12993@tekig7.PEN.TEK.COM>
Source record: 196155
Cross-posted to: misc.wanted,misc.forsale.computers.other,comp.sys.atari.st

Looking for a BASIC compiler for the Atari ST, original disk and a manual
that will execute floating point code at least a bit faster than Atari BASIC.
It would be helpful if it could compile from floppy and run on an ST520FM.
Need not be the latest and greatest version.

Other math software for the Atari ST would be of interest. There used to
be a version of Maple that ran on the ST but other things might be of interest.

Looking for a small SCSI drive. Needn't be fast or large but needs to work.
Can be a bare internal drive but might be interested in a case/power supply.

please reply by email if at all possible
thanks

One thing that might help is FormDoIt. It is an auto folder program that
extends the capabilities of the error dialogs. One additional feature is
that you can select any button with keyboard equivs (I'm pretty sure at
least, as I have never used this feature). It is available via ftp.

The copying file in mint 1.08 distribution says that only the unmodified
source code is redistributable but the binaries are not. So you must
learn how to compile C programs and compile it by yourself. Good luck.

As of version 1.38 gas does not accept Motorola syntax. Register post-increment has to be specified as a0@+, pre-decrement as a0@-, and register indirect as a0@(disp) or a0@(disp,d0:w) or a0@(d0:l) for example. Another thing to whatch out is that branch instructions should be specified as jeq, jne, ... instead of beq, bne,... (special exception: jbsr for bsr); the latter are taken as fixed sized.

Thanks for the information. If 1.38 doesn't like Motorola syntax,
I would have been less confused if it had consistently rejected it.
(cmpl (a0), (a1) caused no complaint, for instance.)

I also notice that gas 1.38 doesn't automatically translate 'cmpl'
when used with auto-increment, but requires 'cmpml' explicitly.
(My original problem was not identifying that bug while trying to
use gas with MIT syntax about a week ago.)

Wrong, I used to use my 3.5" drive on my old 520ST with my dads IBM all the time.
The IBM has a way of formatting single sided disks, and it worked perfeclty.
I transfered files all the time. The only drawback is the small amount of storage available.
Anyway, it worked fine with TOS 1.0.

It'll revive things for Atari; they'll never release another computer,
IMHO.

> There is little to no press coverage after the initila minor blurbs that
> popped up here and there....

That's still more than they get when releasing a "new" computer (I can't
really bring myself to call a 16Mhz '030 machine a new computer... even
the idea of putting a DSP in it isn't new; and the "new" one before that
was a 16Mhz '000). They've even got a few dozen developers signed up,
which is more than the Falcon030 ever had.

> ATARI IS A DEAD PLATFORM FACE THE FACTS!

Not as a games console. If they were, Nintendo wouldn't be making
vaporware announcements about their "new" MIPS-based console, which
might be out some time in the next three years...

Then you must've had some old -lh1- lharc archives, some ARC files, a
bunch of old ZOO files (using the old crappy compression), and probably
a few old ZIP files too.

Converting from old archivers to modern ones will almost always save you
some space.

The main problem I see with GEM games is that you can't do
double-buffering; you can see this same problem in Windoze games that
try to do animation. This pretty much excludes any game that needs any
kind of animation. Even doing something like the Ultima games (before
VI anyway), where you have a field of tiles which are slightly animated
(they change every n seconds), isn't going to work very well (although
that'd be easier if we all had TTs; the ST/STe/MegaSTe probably aren't
fast enough to do it without the delay being annoying... Falcons might
be fast enough).

> etc] runs even better!]

It's very painful to upgrade _anything_ on an ST. Putting a high-res
colour display on such a slow computer would be very frustrating... The
low-res resolutions that the ST supports out of the box are pretty much
all it can drive at a reasonable speed.

Again, useless (or a serious pain in the butt) for running multiple
programs (remember that little thing... MultiTOS; and Geneva), not to
mention the fact that you can't yank things out of the cartridge port
while the machine is on...

GEM programs *halt* when an alert is up under MultiTOS; not good if
you're transferring files. GEM _and_ TOS programs *halt* when the
floppy is accessed; not good if you're doing anything.

How long does it take _you_ to dig up a particular disk? I'll bet it
would take longer if it was a piece of software already installed on
your hard drive (it sure takes me a while to dig up the floppies for
anything on my hard drive).

I have one new copy of the Hotz Translator software for Atari computers. Runs on my STFM and my Falcon, includes original software disks and a large manual. one of the most complex yet easy to use music software packages for the Atari. asking 100 dollars. leave e-mail if interested.

4108. 1040st Rev.c modification help

Newsgroup: comp.sys.atari.st
Date: 1993-12-27 19:35:33 UTC
From: asmodeus@telerama.lm.com
Message-ID: <2fnde5$42a@telerama.lm.com>
Source record: 196147

I just bought a used 1040st for my girlfriend for xmas, and I am running into a few problems in upgrading it.

When I opened it up to put in tos 1.2 instead of the 1.0 that was in it, I found only 2 chips instead of 6, c070705-38 and c070706-38 chips. Also under the 06 chip was a z-time socket(piggyback) timer. I was not given any disk with the computer, and was wondering how I should proceed from here? Should I just install the 6 chips, and leave the ztime in? Should I take the ztime out, and put in the 6 tos 1.2 chips? (btw, there are 6 sockets, with the current chips in the u63 and u67 sockets, and the others empty and no sign of jumper wires.

How do I access this timer? How do I set the thing, and do I need to run any program in the auto folder for the time to be kept? How can I get these programs if needed?

I got a good deal on this, and now I wonder if it was such a great deal. :)

Limited liability, as opposed to sole proprietor/partnership (etc.? I'm
getting out of my area of understanding here!). Microdeal Ltd. was the
trading company, Microdeal was a trading name used by the company. HiSoft
is not a limited company, HiSoft is merely the trading name of the proprietor
(as are Microdeal & AVR, trading names that is).

(catching up on a zillion articles I missed over the holidays...)

Wolfgang, can you give maybe just a list of the settings (Display/Emulation,
i.e. Character sets) for VT emulation (lines included) as well as ANSI.
Basically, just a "Use these four character set settings..."

With all those options, it can get a little confusing sometimes :-)

Actually, to do simple animation (like the waves moving in ultima) I'd use color cycling of three or four shades of blue, or something similar for lights. But you're right. Any game that requires lots of full screen changes is just not going to be done through the OS on any platform without having a really high end machine or hacking and doing direct to screen within your own window. I don't think and OS supports double buffering for applications, but I could be wrong... For that sort of game it makes sense to not go through the OS, and there are plenty of games for the ST line that do that. I'm working from a different perspective, which is that the game may not be as flashy, but you cam play it when you have a case of writer's block without having to quit from your word processor (assuming MTOS) and compatability across all Atari machines including graphics cards & clones.

The languages in the Benelux are Dutch, French, and to lesser extent,
Frysian and German. To my knowledge, no Dutch ST roms are produced --
UK roms are standard in the Netherlands -- in Belgium and Luxembourg
you might find French roms (can anybody confirm on this?)

> Keyfiles are now freely transferrable.

Well, that may be more a statement of the reality of things, but it isn't legal. The proliferation of keyfiles are the primary reason we're discussing a complete revamp of the keyfile system.

ATARI UNITED! is an organization dedicated to providing support for the TOS platform. AU!'s first project is to register as many TOS users as possible, thereby creating a list. Depending on the inclination of each registrant, that list can be 'rented' to developers, dealers or even Atari itself. The actual names will always be kept strictly within AU!, and not sold or made available to anyone else. (Renters send mailing pieces to AU!, who will then label and mail the pieces.)

AU! will be running ads in non-Atari specific publications, to reach TOS users who have fallen outside the mainstream of the Atari community. To pay for those ads, the ATARI UNITED! SoftWareHouse was created. AU!S's first offering will be FreeZe Dried Terminal v2.30. AU!S will handle the registrations and some ongoing support for v2.30, in North America. European registrations will continue to be handled by the existing agent. We are working on lining up other shareware products for the AU!S label, but as of now, we don't have anything to officially announce.

If any shareware authors happen to read this, and might be interested in working with us, please feel free to send me e-mail! We'd love to talk.

You might want to take a look at Microsoft Arcade for Windows (someone
demonstrated it to me). The animation, etc, is smooth and very true
to the original games. However, unlike most Windoze programs, this
one "takes control" (if you switch to something else, the games go into
"pause" mode).

I would imagine that GEM games would probably have similar restrictions
to Windoze games, and as such, perhaps the same techniques employed
on either platform could work?

Actually, I think there is a program called MDIAL or something like that
that will put all alert/dialog boxes into their own little window. This could
alleviate this problem...

(two if's though: I dunno what would happen if you ran out of windows, though
this wouldn't be a problem under MTOS/Geneva/Winx; also, UIS III seems to
be a little touchy about being put in a window (i.e. it crashes sometimes :-})

Floppies are a last-case scenario for me. Only rare times, like if I
reformat my hard drive for some reason, or I update my version of
Gemview (the floppy has my info on it) do I even mess with floppies...

This sounds like it could be useful if you could substitute GNU zip
instead... does anyone know if the author is still updating the program?

> Summary: There seems to be no useful backup program available on the net.

True.

You left out Turtle, which also can't handle high density floppies and
doesn't compress files.

From: trockij@nmr1.Cyanamid.COM
Message-ID: <2fper3$div@c3po.jvnc.net>
Source record: 196102

Can anyone direct me to a good version of Unix for an Atari ST, either a 1040STe or a Mega 4? I have a "demo" of Minix, but it is much too bare for me to make any sort of decision.

I understand that there are several versions of Unix available for the ST, but I have only seen Minix.

Please leave some descriptive (wise?) information, and an FTP site where I can get them (that is, if they are public domain / shareware).

In that case, ImageCopy2 is *much* faster than GEMView, especially at displaying XIMG files and TIFFs. It also has much better dithering facilities with better results, mainly when viewing 24bit images at 256 colours.

'That area'?? Western Europe you mean? How about 'each country has its own
language' ...? But as far as computers, Atari ROMS, etc are concerned:
English. Except for Germany of course, since they do everything (and I mean
everything :-) in German, including their ROMs.
My god, imagine you have to '\"offnen' (open) a document or to 'speichern'
(save) something to your 'festplatte' (hd)... :-)

Last time I looked at a recent 5 1/4" HD drive, it looked like the
heads were ganged, i.e. there were 2 sets of 2 closely spaced heads. I
think thats how they got around the problem of DD diskettes in HD
drives. The earlier drives probably didn't have the ganged heads.

I've done this with lots of Macintosh diskettes - the conversation
usually went "What kind of Mac do you have at home?" "Oh.. its a Mac
SE" "Does it have a label that says 'Superdrive' on the front?" "No.."
"Bingo! I'll just tape over this hole here, and voila!"

Note that IBM PS/2's handle diskettes differently from clones. Clones
can "see" the hole, IBM PS/2's can't. We have all kinds of braindead
students who format DSDD diskettes at HD on a PS/2 in the labs and
either start losing data after a few weeks of use or take it home and
can't use it with their clone.

Boy, what nonsense do these guys tell...

The jumper strap next to the 6888_1_ socket is to be removed when a 68881 is installed. When there's none, remove a certain resistor.

Fact is, there are some VERY EARLY MegaSTE units that can't handle HD drives due to a bug in the PCB layout. Early MegaSTEs also didn't have the 68881 jumper, but these two things have nothing to do with each other.

>: : Thanks an awful lot--especially to those of you who have helped me
>reach : this deeper level of more knowledgable confusion, : Dan

> No it will not work Atari in their wisdom used the 'wrong' side of the
>disk for the single sided system....

(sigh) Bare nonsense. Atari, as well as any other vendor of single-sided floppy drives, used the lower surface of the disk. So did Commodore in all the PET, CBM, VC154x floppies, so did Apple in the early Macs, and everybody else, including IBM's 5,25" 180 KB floppies.

Atari used standard Epson and Chinon drives, btw. Nothing especially manufactured for their wisdom, just stock drives with a nicer front bezel.

The point in making single-sided drives was: the only r/w head was fixed to the bottom plate of the drive (radial movement possible, of course), whereas the later added second (upper) one had to be liftable for removing and inserting disks.
Single sided drives had a fixed head and a liftable brush on the other side, applying a certain pressure to the disk.

No drive manufacturer would have been stupid enough to make a drive with a liftable head and a fixed brush underneath...

Yep, there is a version of Videomaster Falcon that includes an RGB-splitter to
enable True Colour grabs!

> Does anyone know of a QWK off-line reader for the ST?

Well, there's Mountain QWK-reader (much recommended!) and Captain's.... Those
are the only two I've heard of...

BZZZZT! Wrong Answer! (stole this one, I confess :-)

NVDI does handle Overscan blown STs. Just place NVDI.PRG before
OVERSCAN.PRG in your AUTO folder.

>works. Thanks.

In plain STs, one can "hack" it by swapping pin 19 and 20 of the Yamaha
sound chip. It's a bit tricky to solder, but it works.

Newer models, like Mega STE and TT, have jumpers to swap A against B.

It could indeed be faster when viewing X-IMG's and TIFF's, but I thought we were discussing loading in GIF/JPEG files, it's now a lot faster than Image Copy 2 on processing those. It may be better with true colour, but the dithering of GIF's is about the same.

Watch_it beats both (viewer only) as far as processing GIF's goes, and it runs on all Atari's from the ST upwards.

Will FZDSTerm v2.30 and later still be released as 'shareware' as I had to do a special deal with Aaron which we were both happy with to register my copy. And unless FZDSTerm ends up on GEnie, or even better, atari-archive, I'm not gonna get it! (And if v2.30 has VT-100, I'm using nothing else, lets hope v3.00 is MTOS/Geneva Friendly :) (And doesn't look like Stalker/Connect/Storm which are good, but bland 8-)

I was having problems with that before; my copy of MiNT would crash during the check of whether to turn on memory protection or not. Yes it makes no sense, but that's the solution that Eric suggested I try.

4153. For sale: Atari ST Shoebox with Syquest 44 MB drive

Newsgroup: comp.sys.atari.st
Date: 1993-12-29 03:03:05 UTC
From: wyant@eplrx7.es.duPont.com
Message-ID: <1993Dec29.030305.5953@eplrx7.es.duPont.com>
Source record: 196127
Cross-posted to: misc.forsale.computers.other,comp.sys.atari.st

Selling a complete shoebox for the Atari:

1) two-bay shoebox with ICD host adapter and latest (6.2.2) ICD software (shoebox has room for two SCSI drives; host adapter includes clock)

2) Syquest 44 MB cartridge drive (SQ555; fits nicely in one bay of the shoebox)

3) Five 44 MB cartridges for the Syquest drive

This was originally a Toad 44 drive configuration and it is still in excellent condition. We wish to upgrade to a larger drive.

For the package: $345.00 (piece pricing can be discussed)

P.S. a Seagate 85 MB fixed drive (ST 296N) is also available.

4154. Request for Help with Atari ST game: James Pond

Newsgroup: comp.sys.atari.st
Date: 1993-12-29 03:06:26 UTC
From: wyant@eplrx7.es.duPont.com
Message-ID: <1993Dec29.030626.6024@eplrx7.es.duPont.com>
Source record: 196126

I recently purchased "James Pond" new for Christmas. It comes on two disks - a boot disk and a program disk. The program disk won't read and it will not autoboot. GEM merely indicates that the disk cannot be read. Diamond Edge cannot even get started to recover the disk. An IBM disk utility says that the disk has a bad sector and a corrupt FAT (directory).

Can anyone help? The game is no longer in production, so it is unlikely that sending it back (to where?) will yield anything worthwhile. My daughter is very disappointed.

Thank you for your assistance.

Re: James pond trouble....

The company that produced James Pond should still exist, as they have
reasonably recently done James-Pond 2 for the CD-32 (Blecch :)

It may just be a virus on the boot-disk. In which case it would
just be a case of replacing the boot-sector with the correct one.
(I don't have the program, and I'm not sure if 'Antidote' supports
boot-writing from a database, as I'm still waiting for it to turn up
amidst the christmas mail surge :)

I'm sure however, that if all else fails, I could dig out the boot
sector and send it to you!

(You could Buy UVK (Ultimate Virus Killer), but buying something to
fix 512-bytes of code is a bit sad. (Although, the program does
come in handy, even with the extra useless bits (who cares whos
birthday it is on x date!?)).)

More than likely, there is someone out there with an original of said
program who can sort this out far easier than myself, not that I
of course mind helping someone who is in such a state of possible money
loss! (A horrible thought if ever I saw one!)

Add-on to prior message:/

The company *many* not exist concerning James-Pond, as they wouldn't
much have to re-code James-Pond for the CD-32, as it's basically
just an Amiga-1200. All they'd have to do is stick a marginally
better sound-track on it and stick it all onto CD!

Bound to be hope though.... :)

4163. New Falcon user questions

Newsgroup: comp.sys.atari.st
Date: 1993-12-29 08:39:49 UTC
From: Desmond_Liu@mindlink.bc.ca
Message-ID: <35323@mindlink.bc.ca>
Source record: 196136

I'm a new Falcon user (yay!) with some miscellaneous questions.

(1) To move software over from my ST to my Falcon, I've hooked up a null modem cable between the two. I've been able to get the two machines talking at 19200, but I can't seem to get Z-modem to work (I've used Stalker, FZT, and STorm without success.) Has anyone else successfully transferred files over a direct serial connection?

(2) How do you lower the !@#$% volume in Breakout? It seems to keep setting the volume of the internal speaker to maximum.

(3) I've got GNU C/C++ 2.5.6 (libraries & include files at patchlevel 95) up and running, and I'm trying to compile MiNT 1.08. I'm running into compiler errors and warnings. Most of them are of the sort "XXXX is being redefined" and lots of type mismatches. Should I worry about these warnings or ignore them?

(4) Related to question (3), I'm running into a lot of these warnings with my "Hello, world" C++ program. Is this normal? Why do I think I have something setup incorrectly?
(5) My "Hello, world" program initially didn't compile when I typed "gcc hello.cc" because the linker couldn't find "cout". But when I typed "gcc hello.cc -lg++.olb" it worked fine. Shouldn't the compiler driver automatically tell the linker to link in this library when compiling C++ code? For that matter, how does GNU C/C++ know which files to link from your $GNULIB directory. A simple C program like "Hello, world" doesn't require you to use a "-l" switch to link in a particular library, yet if you use the GEM or curses library you need to specify the library.

|> (5) My "Hello, world" program initially didn't compile when I typed "gcc
|> hello.cc" because the linker couldn't find "cout". But when I typed "gcc
|> hello.cc -lg++.olb" it worked fine. Shouldn't the compiler driver
|> automatically tell the linker to link in this library when compiling C++
|> code? For that matter, how does GNU C/C++ know which files to link from your
|> $GNULIB directory. A simple C program like "Hello, world" doesn't require you
|> to use a "-l" switch to link in a particular library, yet if you use the GEM
|> or curses library you need to specify the library.

The only library that is automagically linked in is the C library
(-lgnu, or -lmint when -mint is specified, or -l*16 with -mshort).
Note that you can live without -lg++ if you don't use iostream or any
other class in -lg++. groff (i think) is such an example with uses
only stdio for input/output.

One of the Big problems with FZD is its programed in Basic, and there
is no support for Zmodem, only XYZ and that is far to slow for high
speed modems, also no background support, and no extended command line,
(arcv) Aaron did not know what I was on about when I asked him...

Here FZD is used many by Teenagers, they like all stupid buttons and frills
that are not needed in a Terminal program....

From the News that has been posted here, I don't think that FZD will be posted
into the normal public domain...

>>-Tim Gallivan

I did read some were that GNU Fax is ONLY FOR ZyXEL MODEMS....!!!

If that is so, why port some thing that mosts of us will never be abel to use..

There was a big list of modem support for Class 2, posted on comp.dcom.modems,
the ZyXEL did not come out to well at all..

There is major incompatiblity with Fax modems and Fax software, some don't
have class one some have class 2 and some have class 2.0, also some
have Sierra chip sets...

So I think it will be a very long road...

A real UNIX OS requires a PMMU to provide virtual memory which is something the
normal ST does not have. So you have to stick with minix.

A long time ago there was a unix for the TT, but the support was dropped again.

Hope that helps

Only in ST High res. (B&W that is). You can run it in any graphics mode, and
you will get colors (including full 16-color ANSI if you're in a 16color mode,
like a MonSTEred ST Low... (actually, if you use "System Font: 8pt" as
your font (and perhaps turn off the scrollbars) then you see pretty
much everything while in ST Medium (only 4 colors, but it's a start :-)

>(Especially one I can't use all the features of due to having such a

I just uploaded an adventure game that I just finished writing. It's called
Dangimere and it is sorta like a cross between Bard's Tale and Alternate
Reality. It may seem a little crude but it was a proof-of-concept game
for me, the next ones I release will be much smoother and with more
animation, plus they will be completely mouse driven. Anyway, it's
on umich (atari.archive.umich.edu under the atari/New directory)
The files are called DANGMER1.LZH and DANGMER2.LZH, please read the
READ_ME.NOW file that is in the DANGMER1.LZH archive.

enjoy....

I think you're making a biased generalization here. I will admit to you
that FZDT has no support for background, but that is its only fault. You
are not limited to XYZ, FZDT supports any external protocol you want to
install. I use GSZRZ with FTZDT and a 14.4k modem. The CPS on
transfers is excellent.

2.30 will be out soon, and I'm assuming it will clear up the
incompatibilities with higher rez and newer machines. It may even have
support for background... I don't have a fettish for stupid buttons, I
like FZDT because it does everything I need it to.

4181. $99 14.4k modem works!

Newsgroup: comp.sys.atari.st
Date: 1993-12-29 18:43:37 UTC
From: lancer@wpi.WPI.EDU
Message-ID: <2fsj4p$1pq@bigboote.WPI.EDU>
Source record: 196005
Cross-posted to: comp.sys.atari.st,comp.sys.mac.comm

I've just joined the ranks of LineLink 144E owners... I use it on an
Atari 1040STf (running STorm) and a Mac SE (running Zterm). It works
pretty well, I must say, even though it only cost $99!

I reset it to the factory settings first thing, then I went through
and reset a few things to my tastes (long connect messages, force the
lights to show true status, etc...) and it worked fine! The included
mac hardware handshaking cable was good, too, and seems rather rugged.
It included AccuWeather software for Mac (which I won't use),
MAcKNOWLEDGE comms software (which I won't use either) and a
CompuServe intro membership...

I ran a modem tester from Toad Computers (a good place for Atari
software) and it reports:

Modem class: 0 (data), 2 (FAX)
Caller ID: not present
FAX speed: 14,400 send & receive
Silent Answer: not present
Chipset: Sierra - SQ322X
Firmware info: copyright 1993 SSC, v1.0 - 08/27/93

Also, it reports that it is STraight FAX (an Atari fax program) compatible.

So it looks like it's a good way to get a cheap modem. $99 from Mac
Warehouse. Look up the number... *grin*

One thing, though. It seems to have a problem falling back from
v.42bis. I finally just set z1 to non-v.42bis and z0 to regular so
when I call a non-v.42bis number I just do atz1... Sort of a hassle,
though. Perhaps there is a fix for this I don't know about?

Also, the Mac flow control doesn't agree with the ST side of things.
That too can be reset though...

cheers!

.s.

4182. GSZRZ 2.28 now shareware

Newsgroup: comp.sys.atari.st
Date: 1993-12-29 18:49:59 UTC
From: boyd@hardy.math.fsu.edu
Message-ID: <2fsjgn$l0u@mailer.fsu.edu>
Source record: 196002

After exchanging email with the author of GSZRZ (excellent GEM Zmodem implementation from Germany, much faster than xyz.ttp), he has agreed to release version 2.28 as shareware (or perhaps "evaluationware"). The version he is selling is up to 4.0. The highest previous version was 1.9 (2.28 is far superior to 1.9). I need to hack on a new readme file first, and include it in the distribution. It should appear on atari.archive and other places real soon.

GSZRZ 2.28 has all the features of 1.9, plus lots of useful new command line options (turn off mouse interrupt, define actual baud rate, define buffer sizes, etc.), a Mac-style fuel bar indicator of download time, and is much faster than any other ST Zmodem I have seen (I get about 1550-1600 sustained CPS on binary downloads, on a Mega2ST w/14400v.32).

BTW, I have seen it posted that the Zmodem in the newest Connect is blazingly fast (I have not seen it). Of course, you cannot use its Zmodem with other programs. GSZRZ can be retrofited to many modem programs, like FZDT, Uniterm, etc.

I don't see a problem in FzDT being programmed in basic (or in any
other language for that matter), as long as it works well. BTW, what
basic is it that it has been programmed in? At least I wouldn't think
it's a slow one, because the ANSI-emulation of FzDT is the fastest I
have seen.
About protocol support, you can install any external protocol in FzDS,
not just XYZ. Also, I don't understand why you say XYZ is far too slow
with high-speed modems; it gives me up to about 1930 CPS when
transferring compressable files with my v.32bis modem. I think it's
fast enough if it can keep up with 19200 bps.
About backgroudn transfers and ARGV you are of course correct. So
let's hope they will appear in future versions of FzDT. No terminal
progarm that I have seen has been perfect.

>Here FZD is used many by Teenagers, they like all stupid buttons and frills
>that are not needed in a Terminal program....

First of all, I don't see how a terminal program gets any worse by
teenagers using it. And I think you should reconsider your view of
teenagers and whether or not they tend to like stupid buttons and
frills any more than the rest of us do. Personally, I don't care if
there are frills or not, as long as the program is easy and convenient
to use, and does a good job on what it's supposed to do.
Second, I don't think FzDT has any more teenage-users than other
terminal programs (not that it would matter even if it had), and
unless you have been making some kind of statistical research on what
kind of people use FzDT, I don't think you can imply, like I think you
did, that FzDT is some kind of a 'teen-terminal' that is only used by
stupid teenagers or their like.

If I may add another 'of course': This is of course only true for the
original Atari SCSI host adaptor. Other adaptors, handling up to eight
SCSI devices are available from plenty of sources.

But I guess I missed something of interest to me. What is this about
those DIP switches in the MEGA/STE and the TT? What do they do? No need
to elaborate here again, if this has already happened, but a pm to me
shedding some light onto this topic will be welcome.

Happy new 1994!
Eddi

>someone in the US uses would also work in London....!?)

>So, the PSU's can autoswitch between 110V and 240V!? (and 50/60hz)

The Jaguar uses an external 9VDC power supply. In the UK this power supply is built on the 3 pin mains plug, and is marked 240VAC input, 9VDC 1.2A output.

>language it's your problem.

Yes, you're right -- I completely forgot the existence of French and Spanish roms and thus stand corrected.
And re: languages. It's not that I don't want to speak in my native language, but in general English is _the_ computer language (historically and factually). So it seems not more than logical to try to maintain a kind of 'standard' in this respect (why not?) and keep using English.
Take for example a Dutch program for the Macintosh I happen to have. 'Save' is 'Bewaren' (Cmd-S), while 'Quit' is 'Stoppen' (Cmd-Q), etc. So the entry starting with B == cmd-S, the one starting with S == cmd-Q, etc, etc. Changing the keyboard shortcuts to match the Dutch words (i.e. cmd-B and cmd-S) would make the whole mac-interface very inconsistent and thus is no option. Result: another form of inconsistency which can be very confusing. Give me an English program anytime, please.
In order to maintain consistency as much as possible, I changed my Dutch version of the Mac-OS (which came with the computer) with an English version. Result: I now have a Dutch manual and an English OS -- whenever I'm searching for something concerning the Desktop, I have to look up 'Bureaublad'. Etc. Arrgghh.
ST examples? A German terminal program has alt-E for 'Empfangen', where an English program has alt-R (receive), while the German has alt-R for RSR232, ... Pure-C: wonderful compiler/environment, but how many UK/US users have bought it? Very little I'm afraid. I could go on for ages, but I supose I made my point clear. I _do_ have French, Dutch, German and Enlish programs, but I wouldn't mind if they released English copies for all of them...

And re: Germans doing everything in German: seriously, I don't understand how a whole nation can stand to look at John Wayne speaking *German*. It sounds absolutely ridiculous in my ears.

And lastly: please note the :-)'s in my original message.

And for all of you who still read these ramblings: a very happy, healthy, inspiring, fantastic 1994, no matter what language you speak :-).

>> Can anyone direct me to a good version of Unix for an Atari ST, either
>
>A real UNIX OS requires a PMMU to provide virtual memory which is something t
>he normal ST does not have. So you have to stick with minix.

If you really *must* have UNIX on an ST, then Minix is your only choice.
I had several different versions running for a couple of years. The best
being M-Kernal 68K which was distributed by 'The Minix Centre' in the UK.
They appear to have dropped it in favour of Linux on the PC. I've dropped
it in favour of MultiTOS which does everything my Minix system did *and*
runs all my *other* software.

The other Unix type systems around are OS/9 and Mirage. Neither are very
well supported at the moment and don't seem any better than Minix.

Whatever - you need 4Mbs and a reasonable size hard disk to do anything
more than a few basic commands.

:-)

I am having a problem when using Harlekin 2 under Geneva. When I access the Manager/Scrapbook function, the mouse pointer disappears unless I can get it up to the menu bar. Then I have to hold down the left mouse button to keep the pointer in sight! This doesn't occur when I use Harlekin by itself or Geneva by itself. I have also gone over both manuals for some clue related to the pointer, graphics, screen, display, options, etc. but no luck. Any ideas? Thanks in advance.

The Falcon and T28 on the ST are about the same speed although 030
compiled programs may be faster. A Falcon of course has the advantage of
much better graphic modes, DSP, up to date OS, VGA compatibility, better
audio, faster serial port, HD floppy drive, SCSI2 and IDE support, better
PSU, up to 14MB RAM, virtual memory support, memory protection support,
proper co-processor support, etc...

The SC1224 only supports analog RGB, no composite or Y/C (chroma/luma) video, so using it with the VCR is out.

However, as I recall, the SNES can output analog RGB, but someone else will need to provide you with the info on how to hook that up, as I do not have it.

Forget John Wayne, you should see Mork and Mindy (Robin Williams) saying
nanoo-nanoo in German :-)

It is very frustrating to see all these great German programs and have no
idea how to use them. I guess the Germans just like their language. The
only way to change such trend is to stop dubbing films and use sub-titles.
The effect of this is remarkable and can be noticed by anyone visiting
Israel. Almost everyone speaks English. Starskey and Hutch American English
of course :-)

> info when using sz, like file names and other commands, (argv) for batch
> uploads etc...

Yes, it can (2.28, the version number sprinkled throughout my post). I use
it with Uniterm (in fact, I have my macros available via anonymous ftp), and
with FZDT. You do not need a shell. With Uniterm, the macro first builds
the command line (using user input from a fileselector or text dialog), then
calls rz.prg or sz.prg. For FZDT, you simply modify the zmodem up/download
dialog to run rz/sz.prg with the correct command line options. You can put
special wildcards in that FZDT will expand to be the destination path, or
files to upload, or whatever. I am not sure how it works with STalker or
others, but it is undoubtedly simple.

I would be quite surprised if version 3.4 or 4.0 (which I will soon have) is
any different. The fact that rz/sz.prg needs command line options is not
particularly unique. All external modem protocols do (xyz.ttp, etc.). It
is trivial with most modem programs to build a command line and pass it when
executing the protocol program (in the case of FZDT, it is a touchy feelie
mouse dialog you have to set up only once). Even with programs that do not
have this rigged to be trivial, you are in business as long as you can build
strings and execute external programs in the script language.

> The other Big problem is how do I upgrade it to version 4....???

Michael Ziegler's email address is in the readme file. I can attest that
it works.

> What will version 4 give me over 3.4..??
>
> But what is the point of all this, its all most usless with out a sz shell...

Again, this is unlikely, given any popular ST modem program (heck, even the
unpopular ones).

Roger in NZ...

Aaron is aware of those shortcomings of FzDT, and plans to rectify them in either v2.30 or v3.0. (An assembly rewrite is likely for v3.0.) I'm not sure what all will be included in v2.30, but as it will be released as shareware, everyone can take a look and decide for themselves.

Version 3.0 will probably be commercially released, but v2.30 will remain a shareware offering.

We'll make an official announcement when things are closer to being released.

Well for one thing they don't allow you to select the file, no file selector,
you can with some Terminal programs send a fixed command list, but then all
things are not fixed, like how many files to send....

GSZRZ works very well with Software that supports it, and that is about 3
programs and they are all German, mosly with out English support...

No!

>Weird.

Yes!

I don't know Pagesteam, but does it use GDOS? If so, have you recently
changed to SPEDO, or the PRINTER.SYS.

And, remember there are two memmory flags, one for loading into TT
memory, and one for doing mallocs from TT memory. Som applications that
don't like both set, runs fine with the run flag set and the malloc
flag not set. Have you set them both or only one of them?

>* Mickey Boyd *

Not many people can program Uniterm macros, I have tried and gave up,
from what I remember FZDT , you need a Text file with the file names that you
wish to upload in it, gee what a gludge..

I will state again SZ is not easy to use with out a SHELL..

Try it with Flash 1.6 and find out....

I need some thing that I load up and it works, not next week but now...!!!

I did find a shell some time back, included with a German terminal program for
GSZRZ, it supported X/Y and Zmodem...

I still rest my case...:-)..

Only thing you can do is change the unit number with the switches
on the internal adaptor.

>programs and they are all German, mosly with out English support...
>
>

I give up on you Roger. Obviously yuou never read the manual, and if you
did you didn't understand it. I repeat, GSZRZ works with ANY program that
lets you use an external protocol. I am using it now with an English comms
program that was not written with it in mind.

If your comms program does not allow such basic feature as running an
external program and passing it a couple of arguements, then you have a
very bad comms program.

Just in case someone's reading this: YOU DO NOT NEED A SHELL FOR GSZRZ. You
just need a decent comms program. The only thing I need a shell for is when
linking BASIC and assembler routines for GEMBench.

>Hey, I thought the MSTe offered a second serial port that was the same
>as Modem2 (or was that Serial1?) on the TT (which means up to 156k bps

Actually the MEGA STE has TWO extra serial ports....

Modem 1 is the old standard port (but in a 9 pin connector version)
Modem 2 has much higher speed but lacks DCD and CTS (i.e. no modem)
Serial 1 is only on TT's
Serial 2 has all signals, and are much faster (this is THE ONE to use)

There also is a RS-422 LAN connector (very fast, Appletalk compatible)

For those of you wanting a magazine that covers ONLY the Atari line, it is here. It is called "Wild Cat" (formerly "The Lynx"), and deals with the gaming side of Atari machines.

Eight full-color issues each year are published, each one full of opinions, reviews, news, tidbits, secrets, letters, and all that fun stuff. This is a FANZINE, though, and not a professionally-run publication - it isn't biased, but it is only 12 pages long).

If you're interested, you can send $1.50 for a sample issue (or $12 to subscribe for a year) to Phil Patton at: 131 Dake Ave.
Santa Cruz, CA
95062

Sorry, but this time, no subscriptions are accepted from out of the United States.

>Regards,
>Matt S.
>usul@mcl.ucsb.edu

Hello,

The Atari SC1224 does only support RGB-Signal with seperate VSYNC and
HSYNC. Here is the pinout of the Atari's monitor-plug:

1 - Audio out
2 - Composite sync (H+V)
3 - ST: General purpose output, STE: Master clock input (for genlock)
4 - Monochrome detect (ST/STE switches to high res. if low)
5 - Audio in
6 - Green (G)
7 - Red (R)
8 - +12V output (max. 10mA)
9 - Hsync (H)
10 - Blue (B)
11 - Monochrome output
12 - Vsync (V)
13 - Signal ground (GND)

I hope this helps you ...

Desmond Liu (Desmond_Liu@mindlink.bc.ca) wrote:
: I'm a new Falcon user (yay!) with some miscellaneous questions.

: (1) To move software over from my ST to my Falcon, I've hooked up a null
: modem cable between the two. I've been able to get the two machines talking
: at 19200, but I can't seem to get Z-modem to work (I've used Stalker, FZT,
: and STorm without success.) Has anyone else successfully transferred files
: over a direct serial connection?

: (2) How do you lower the !@#$% volume in Breakout? It seems to keep setting
: the volume of the internal speaker to maximum.

: (3) I've got GNU C/C++ 2.5.6 (libraries & include files at patchlevel 95) up
: and running, and I'm trying to compile MiNT 1.08. I'm running into compiler
: errors and warnings. Most of them are of the sort "XXXX is being redefined"
: and lots of type mismatches. Should I worry about these warnings or ignore
: them?

: (4) Related to question (3), I'm running into a lot of these warnings with my
: "Hello, world" C++ program. Is this normal? Why do I think I have something
: setup incorrectly?
: (5) My "Hello, world" program initially didn't compile when I typed "gcc
: hello.cc" because the linker couldn't find "cout". But when I typed "gcc
: hello.cc -lg++.olb" it worked fine. Shouldn't the compiler driver
: automatically tell the linker to link in this library when compiling C++
: code? For that matter, how does GNU C/C++ know which files to link from your
: $GNULIB directory. A simple C program like "Hello, world" doesn't require you
: to use a "-l" switch to link in a particular library, yet if you use the GEM
: or curses library you need to specify the library.

Well, as much as I cry over the slow death of my beloved Atari, it
is becoming more and more apparent over time that the views of Jack
H. might be in the right direction. Let's face reality folks - You
can go down to your corner Amiga store and buy a brand new machine
for a cheap price. I got to travel 50 miles to buy a new Atari from
Toad! Gaithersburg MIGHT carry a Falcon. Oh, there are a few music
stores (Music Stores! Geez!!!) that carry them. I don't blame the
poor misguided souls who are buying 486s and Macs for cheap prices.
At least you can buy supported software! Just cuz I like playing with
a "toy" keyboard on an unsupported machine doesn't mean the rest of the
world has to be so foolish! I still think if the PC world would wake up
and add a decent sound board, as standard equipment and a few graphics
chips, we could have our new born Atari. Maybe IBM will buy out Atari
and call the new subsidiary ABM????? But, Mr. Horwitz - I am still using
my 20MB hunk of junk disk drive and my 1MB ST until the keys quit working
completely and the joystick attachment on the board disinigrates into
40 splinters!!! Oh, univeral Atarians, do not abandon hope.....
Just remember, it will be a slow death, since you can still get 800XLs
```

for $5. Soon, you will see STs sitting in junk bins in your neighboorhood thrift shop. I saw an Apple II all beat to hell up in Laurel, Md. with a few disk drives for $30 (only a few keys missing :-)).

] from what I remember FZDT , you need a Text file with the file names that
] wish to upload in it, gee what a gludge..

Have you ever tried using it?

It comes up with a batch-file selector, which you can select files from.
It then runs XYZ or whatever supporting program, and then sends the text
file to it. If running from hard-Drive, or using RAM-Disk protocols as
I am, you don't notice it doing this! It is a very compatible method
for programs not supporting extended command-lines......

(And a lot of protocol programs don't.....)

Source record: 196055

I'm looking for a cheap (or public domain) word processor
for a 1040ST. Features desired: WSIWYG interface, spelling checker.
If it runs on a 520ST also, that's a bonus. Doesn't need to
be a full-blown publishing system, though of course
that's always nice... :')

At least one person suggested ST Writer as public domain, but
I haven't found it in any of the archives. Pointers to
archives would help. Or - if you have something for sale,
that's nice, too.

(While I'm at it - does anyone know of Atari dealers
in the Chicago area?)

I just got off the Phone from Steves Hardware/Software in California.
This was the friendliest most Atari knowledgeable phone call I have
had in years! If you need anything for your system, buy from this
place. I talked to Steve personally and he answered every question
I had and was honest about every part of it.

>>Someone said recently that although the Falcon has a SCSI 2 interface it
>>can't physically reach the 10 Mb speed that SCSI 2's can achieve. Is

AFAIK there are at least 4 different types of SCSI2

1) Basic SCSI 2
2) Fast SCSI 2 (whats being talked about here)
3) Wide SCSI 2 (32bit path)
4) Fast Wide SCSI 2

Almost everything is currently limited to types 1 and 2. The fact that
the Falcon's SCSI 2 interface is a type 1 is no great loss considering that
this is still better than the internal IDE interface (or at least it should
be).

Come again what English manual, I brought mine direct from Michael,
its all in German..

I did ask him via Internet and he did send me a Translation, but its very had
to understand, but I would not call it a manual, more like a indexed list of
commands...

There is no mention of a File Selector at all, you must pass the file name in
the command line and any options that you need, so you DO NEED A SHELL to
support this program properly..

Tell me how do you do Batch uploads with it, it has support for ARGV, this is
needed if you have many files that are very deep inside a directory...

I use Flash 1.6, and intend to, untill there is a better Terminal program that
works, and I think I have tried them all...

I have found that with Flash 1.6, YOU DO NEED A SHELL for sz support...

I still rest my case....:-)..

>(2.28 is far superior to 1.9). I need to hack on a new readme file first,
>and include it in the distribution. It should appear on atari.archive and
>other places real soon.

If GSZRZ is the .acc xyz-modem program from Germany that I am thinking
about, this is good news for those people who have not upgraded to the newest
version of CoNnect - the reason being that if this is the program I am
thinking of, CoNnect has an option to use it instead of the built-in protocols
(and with CoNnect, you can set it up to auto-down/up-load), and it is faster
(from what I have heard) than the CoNnect's earlier zmodem.

>GSZRZ 2.28 has all the features of 1.9, plus lots of useful new command line
>options (turn off mouse interrupt, define actual baud rate, define buffer
>sizes, etc.), a Mac-style fuel bar indicator of download time, and is much
>faster than any other ST Zmodem I have seen (I get about 1550-1600 sustained
>CPS on binary downloads, on a Mega2ST w/14400v.32).

Hmm. Does this mean you are only connecting at 9600? (V.32 is the
4800-9600bps protocols, while 12000-14400 are V.32bis protocols).

>BTW, I have seen it posted that the Zmodem in the newest Connect is
>blazingly fast (I have not seen it). Of course, you cannot use its Zmodem
>with other programs. GSZRZ can be retrofited to many modem programs, like
>FZDT, Uniterm, etc.

Why don't you try benchmarking the two versions - 2.28 of GSZRZ and
CoNnect 2.42's version of Zmodem. I'm sure that a lot of people on the net
would be interested in the results.

You can do:

-sz *.C *.H send all files with extensions .C and .H using ZMODEM

You can also use a script file:

-s FILE.EXT

Where the script is an ascii file containing all the files you wish to
send.

Michael are you still handling Wolfgang's US registrations? And if so
can you post a translated version of the upgrade notice that came with
the new version? I'd like to upgrade but I'd kinda like to know how much
and where to send it and (last but not least) what I'm getting for it.
Lastly, is the fax option for 2.50 just for Zyxel modems (I hope not,
I'm already mad that I can't use the answering machine stuff--looks
awfully cool).

Admittedly, there is not a very good translation of the manual. However using the Ger2Eng Program and a little experimenting, I know what almost all the manual is talking about. And I don't know a word of German.

>There is no mention of a File Selector at all, you must pass the file name in
>the command line and any options that you need, so you DO NEED A SHELL to
>support this program properly..

Roger, I can see why people are giving up on you. I'm about to give up on you myself. Stop being so bloody ignorant, Man! YOU DO NOT NEED A SHELL TO RUN GSZRZ!!! Stop spreading this false information. I use it perfectly well with FreeZe Dried Terminal. I can do batch uploads and downloads as easy as pie, WITH a file selector. The only commands I have to send are as follows:

For Receive:

Filename: RZ.PRG
Command Line: Nothing!

For Send:

Filename: SZ.PRG
Command Line: -s #L

That's it!!! It doesn't take a rocket scientist to do that, does it?

>Tell me how do you do Batch uploads with it, it has support for ARGV, this is
>needed if you have many files that are very deep inside a directory...

You do batch uploads with it by following the instructions above using FreeZe Dried. You just select the files with the file selector and it uploads them. You see, the -s #L command is made up of 2 parts: -s tells GSZRZ to send the files listed in the file next to the -s command. The #L command tells FZDT to insert the name of TEMPSEND.BQL, the file created when you select files with the file selector.

>I use Flash 1.6, and intend to, untill there is a better Terminal program that
>works, and I think I have tried them all...
>I have found that with Flash 1.6, YOU DO NEED A SHELL for sz support...

That may be true, but saying you need a shell to use GSZRZ period is incorrect. And that IS what you were saying. If you refuse to get an up

to date terminal program, you certainly can't blame GSZRZ. And I would even say you COULD use it with Flash, but it's been such a long time since I did a Flash script I don't remember what you would need to do. My point is this, GSZRZ is an excellent program, German or not. It takes a little effort to learn how to use it, but it beats the hell out of XYZ and many other Zmodem implementations. It deserves no criticism, unless you want to blame Michael Ziegler for being born in Germany.

On this subject, does GSRZ or whatever, support the 'Zmodem-90' protocol?
(Which has built-in data-compression for us broke people who can't
afford data-compressing high-speed modems!)

I remember seeing one protocol mention something about it (XYZ v2.02b???)
But I've only just found something that supports it....

This Serial fix from Germany has been around for a number of years, its being updated all the time, its now called HSMODA01.xxx , its now modula, what ever that meens as the Docs are still in German, the HSMODEM1 is called HSMOD105.xxx from what I can gather its far better than SERFX20..

>:: Craig Shore. Phone +64 3 385-6554 (Christchurch, New Zealand.) ::

Peter Missel,
---
many thanks for your help, COMA 150 now seems to work, when using your setting and HSMODEM1.PRG.

There is a small problem with the Demo version, when I just enter one small line of Text, it prints at the bottom of a 70mm page, the Demo Title is at the top of the page, and my message is at the bottom, but the letters are cut off at the bottom, That was using no headers/footers, if I use the Demo IMG file, that is OK, it fills the 70mm page....

!!!!!!

One big problem is the Shareware Price, its far to dear for Shareware, its even dearer than a Commercial program...

This seems to be a Big problem with ALL GERMAN software, Shareware and Commercial, its far far to dear, and very little English support..

100DM works out about $150nz, there is no way I will pay that for a Shareware program, I can get STraight Fax for less than that, the only Problem with STraight Fax there is no Demo version.....

As we don't have any Atari dealers here, I would like to try before I buy..

I have the Program called Script version 1.0, I like it and I found the German Demo of Version III, very nice indeed, but how do I update this, there is no support for the English version now...

Its a pitty as the Atari lacks in Good word processors

Germany produces some of the best Atari software, or should I say some of the only Atari software, but only about 10% has been converted to English, to me this is a real shame....

The simplest way would be to write a macro file or something I guess.
That shouldn't be at all hard as the language seemed pretty similar to
Basic when I looked at it.

> I need some thing that I load up and it works, not next week but now...!!!

Why not try to do things yourself if you're not happy with what others
have done. There are easily available source codes for Z-Modem!! Also
remember that most people are able to find an easy way that suits their
own situations, without having to pull down what others are doing!

Maybe this helps:

from the manual:

----------cut here----------

Compression of ASCII files

-z If this parameter is specified, RLE compression is enabled.
It depends on the sender if it will be used. This parameter
can be useful if you transfer ASCII files and do NOT use
MNP5 or V42bis. RLE is a rather simple compression algorithm
but fast enough to enhance the transfer rates.

At last we agree on something, Roger. BTW, STraight FAX is very nice and
the latest version runs as a desk acc which is very useful. Maybe the
author is reading this and will produce a demo, not a bad idea. For one
thing, it's in English and comes with a printed manual.

Doug Byfield did willfully write on 30 Dec 93 (to All), and I quote...
DB> From: dbyfield@outb.wimsey.bc.ca (Doug Byfield)
DB>
DB> I am having a problem when using Harlekin 2 under Geneva. When I
DB> access the Manager/Scrapbook function, the mouse pointer disappears
DB> unless I can get it up to the menu bar. Then I have to hold down the
DB> left mouse button to keep the pointer in sight! This doesn't occur
DB> when I use Harlekin by itself or Geneva by itself. [...]

I've noticed the same effect, also with some other program (forget which just now...), and seems to be some incompatibility in mouse handling, apparently when going through the (Harlekin) dialogs. I first noticed it when changing linelength in the editor, then later after any Harlekin function that throws up a dialog. Luckily the mouse pointer returns outside H2, so at a pinch one can switch foreground (alt-tab) to locate the pointer and place it correctly for the next H2 klick (on the
'backgrounded' H2 window).

I was going to enter H2 in the Geneva flags section and fiddle with some settings to see if some of Geneva's extensions are the problem, not being foreseen by H2 programmers.

BTW, starting H2 from desktop in Geneva doesn't work - bombs, so there are definitely _some_ incompatibilities running H2 under Geneva. All in all, however, everything else in H2 seems to work ok (it's always resident in my system with or without Geneva).

Harlekin 3 might be the solution...

Will it run on a Falcon at all? If so does it do anything Falcon specific?

>CoNnect 2.42's version of Zmodem. I'm sure that a lot of people on the net
>would be interested in the results.

Yes! I'm interested, too. I don't have GSZRZ newer than 1.9b, but with
the current version of CoNnect (2.42) under TOS 2.06 with a ST with 16MHz
I reach up to 3750cps when transfering Textfiles via my ZyXEL. I think that
things would be a bit faster if i had more than 38400bps a my serial port...
(38.4k is a small hardware patch for less than 1$).

To get the latest version of Zmodem source you have to pay for it, the one that is in the PD is very old...

It would be far easyer to write the Shell for Flash, there is no poit in reinventing the wheel...

The file selector command can't be programed into a script...

That is why we have Zflash, a Zmodem Shell, not very good.....

I have not pulled down what otheres are doing, all I state that it needs a shell to work 100% with Flash and some other programs, GSZRZ is the best there is for the Atari, its a pitty that all Terminal programs don't use it...

I am not a programer but a Computer Tech....

Source record: 196084

In <CIt6Ap.1G1@exnet.com>, Miles Fender writes:

Hi Miles,
[problem: can't get real money, big problems with battles]
>Any tips gratefully received...
seems you ran into the differences between Elite I and II. In Elite II, battles are much harder and definitly not the way to start. Try using my strategy (from the PC version, I'm still looking for the ST version):
- use the default setup (on Mars, with autopilot and stuff)
- lift off, fly to one of the space stations around earth
- sell all weapons and the atmospheric shield
- buy animal meat and fly to banard's star
- sell the meat, buy computers/roboters and fly back to earth
- repeat this until you've got enough money (it does pay off to buy a larger ship after some time)

After you've earned enough money (5 million was enough for me) buy a fast ship to begin fighting. The ASP explorer is an extremly good choice. Do NOT fiddle around with pulse lasers and plasma accelerators, use beam lasers only...

/s/Udo
PS: To the german readers of this newsgroups: Who sells Elite II for the ST in Germany, english version preferred? Any hints are appreciated

>titles.
Nice idea!

A lot of programs from Germany came with bilangual documentation. The only reason that not every program has that is maybe, that there are very few Atari users outside Germany... So there are not many authors which are willed to write an extra documentation in a foreign language.

What about offering your help to translate docs to english instead of complaining that everybody in the world is a native english speaker? Even if you don' understand german it should be possible.

>flare and show us the way!
try using the STICP package. It is a souped-up version of KA9Q supporting the
additional modem ports in a TT or Mega STE. I am not sure, but check out
ftp.uni-clausthal.de for the archive (sticp.*). In any case, you should also
get the source package (sticpsrc.*) or you won't have any documentation...

If anyone needs help setting up this bastard (it's an awful job), send out
a distress beacon...

>for the 550C? Much software that supports color?

Calamus SL (dtp program), Signum! 3 (word processor), Chagall
(drawing) Retouche professional (for touching up scaned
photographs) and DA's Vector support color. GemView does too, I
don't know if it does any printing, though. If you have any
program that produces color postscript output, you can print that
on your DeskJet 550C using GhostScript, which has been ported to
the Atari platform. I'm not sure if the binary available via ftp
has the deskjet driver compiled into it. If not, it shouldn't be
too difficult to do that.

A happy new year to all you fellow Atarians!

Okey, since I've talked to several people having problems using MANY programs on the Falcon due to the Color-VT52 bugs, I'm asking:

CAN SOMEONE *PLEASE* MAKE A FIX FOR THE BUGS IN TOS 4.0X COLOUR-VT52 ROUTINES?

The only programs I've heard that removes the bug are NVDI and Warp 9, but since those are commercial not everyone has got them!

(I would gladly try to fix it myself but I don't have the deep TOS knowledge I guess I'd need ...)

Why hasn't Atari released a bugfix, usually they do release bugfixxes, right?

4264. GEMBench 3.40

Newsgroup: comp.sys.atari.st
Date: 1993-12-31 17:32:18 UTC
From: ogal@cix.compulink.co.uk
Message-ID: <CIwu1u.Fyn@cix.compulink.co.uk>
Source record: 196095

I have discovered a few small bugs in v3.30 of GEMBench which I have
managed to fix. I will upload a new version to ftp.cs.tu-berlin.de during
the weekend. Here's a list of the new features:

New Features and bug fixes in V3.40
---

* GEMBench now uses a toolbar which is user controlled. The
toolbar has the same function as the menu, but gives a quick,
one-click access to all functions.
The tools are (from left to right):
Save, Print, Display tests, CPU tests, All tests, System Info,
MiNT Priority, Blitter, User Preferences.

* User Options:

You now have some control over the GEMBench interface. There
are four options currently. The dialog box to set these is
available from the window menu or from the toolbar.

Display Menubar

Determines whether the window menu bar is displayed. The
keyboard shortcuts are active regardless.

Display Toolbar

This determines whether the toolbar is displayed.

Frame Headlines

This puts small frames around the titles of the boxes.

Right Button Drive

Under GEM, the user may click and select objects in background
windows by holding down the right mouse button and clicking
with the left.
If you have this option selected then the right mouse button
can be used in background windows. This option means that you
no longer have to hold the button down, just use the right
button on all windows.

The dialog has the standard Save, OK and Cancel buttons. Save
is only available to registered users.

* The time delay for unregistered users has been reduced.

* Iconify bug fixed (requires AES 4.10)

* Print and Save went slightly wrong in v3.30, should be OK now.

If anyone is wondering, I am planning to add some more tests to GEMBench, possibly a SpeedoGDOS test and I am open to suggestions.

Ofir ogal@cix.compulink.co.uk

4265. SC1224 Monitor Brightness

Newsgroup: comp.sys.atari.st
Date: 1993-12-31 19:05:47 UTC
From: vrao@nyx.cs.du.edu
Message-ID: <1993Dec31.190547.4354@mnemosyne.cs.du.edu>
Source record: 196087

I just bought a used SC1224 color monitor. When the controls are set to maximum brightness and contrast, the screen still seems a little dimmer than I would like it. Is the "brightness" factor something that can be adjusted with each monitor? I have been using a monochrome monitor for the past few years and have had no "brightness" problem with it. I would appreciate any help for my question. Thanks.

You can take the cover off and adjust the POT on the circuit board
and increase the size, and brightness and etc. Please let someone
who knows what he is doing, do it. I have fixed a dozen or so monitors
this way.

>affordable one, at least) that drives the NCR chip to its limits.

Can you say SCSI Ethernet? I knew you could. :)

Besides, there is always cache on most hard drives, and those caches
seem to be getting bigger all the time.

Speaking of SCSI Ethernet, has anyone finished a ethernet.xfs or
IP.xfs yet? Even if it only supports the TT/MSTe's lan port...?
(BTW, when I refer to ethernet.xfs, I actually refer to a port of the 3127
packet drivers and perhaps a skeleton interface for Novell...on second
thought, it would be better to have _no_ Novell support, but to have someone
port NETX.COM to support it the new ether.xfs packet driver).
